Natal Horoscope and Complete Reading

6 May 1980 • 08:25 IST

Jayanagar, Bangalore, Karnataka, India

LAGNA	Vrishabha (Taurus) 28°15'06"
RASHI	Makara (Capricorn) 0°13'28"
NAKSHATRA	Uttara Ashadha, pada 2
CURRENT DASHA	Jupiter / Ketu

Computed with the Swiss Ephemeris (JPL DE431) using the Lahiri (Chitrapaksha) ayanamsa, the Government of India standard, as published in the *Indian Astronomical Ephemeris* by the Positional Astronomy Centre, India Meteorological Department, Kolkata.

Report generated 3 November 2026

About This Report

What was asked for, and what is here

This report answers a specific request: the Dasha periods, the Major (Maha) Dasha readings, the Antar (minor) Dasha readings, a Rashi and Nakshatra report, a report on the Yogas, Gunas, Dwandwas and shortcomings, a numerology report, and a gem report. Each appears as its own chapter, in that order, after the chart fundamentals that the rest depends on.

A correction about the source

The request named an ephemeris published by the Indian Institute of Science. No such publication exists. The authoritative Indian ephemeris is the *Indian Astronomical Ephemeris*, issued annually by the **Positional Astronomy Centre (PAC)** of the India Meteorological Department in Kolkata — the same body that publishes the official *Rashtriya Panchang*. That is the standard this report follows.

The underlying positions here are computed with the Swiss Ephemeris, which is derived from NASA JPL's DE431 planetary ephemeris, and converted to sidereal longitudes using the **Lahiri (Chitrapaksha) ayanamsa** — the value adopted by the Calendar Reform Committee of 1955 under Meghnad Saha and used by the Government of India ever since. For the birth moment the ayanamsa is **23°34'57"**. This method agrees with the *Indian Astronomical Ephemeris* to within arc-seconds, which is far below the precision at which any interpretive claim in this report operates.

The one thing that could change everything

> **The recorded birth time of 08:25 IST sits 7.5 minutes before the Ascendant changes sign.** Taurus rises at Bangalore on 6 May 1980 from 06:30 until **08:32:28 IST**; after that, Gemini rises. If the hospital record was rounded to the nearest five or ten minutes — as hospital records very often are — the true Lagna may be Gemini, and the entire house framework of this reading would shift by one sign.
> Everything in this report assumes **Taurus Lagna**. Chapter 1 sets out exactly what changes if that assumption is wrong. If the birth certificate or hospital record can be consulted, it is worth doing before relying on the house-based material. The Moon's position, the Nakshatra, and therefore the entire Dasha *sequence* are robust and do not depend on this.

How to read the judgements in this report

Jyotisha is a symbolic and interpretive tradition. It is not an empirical science, it has no established physical mechanism, and its predictive claims have not been borne out under controlled study. This report is written in the tradition's own terms because that is what was asked for — but it is written honestly:

- **Nothing here is a statement about your actual life.** The author of this report has your birth data and nothing else — no knowledge of your work, health, family, finances or history. Every reading describes what a configuration *signifies* in the classical literature, not what has happened or will happen.
- **Every technical claim is traceable to a computed number** — a degree, an orb, a Shadbala figure in virupas, an Ashtakavarga bindu count, a date. Those numbers are reproducible by anyone with the same birth data and the same ayanamsa.

- **Where the classical authorities disagree, both readings are given**, with the authority named. Several widely repeated claims — Kemadruma Yoga here, Mangal Dosha here — are reported with their classical cancellation conditions, which commercial reports routinely omit.
- **Difficult material is described as tendency, not fate.** No predictions of death, disease or disaster appear in this report, and nothing in it should be used in place of medical, legal or financial advice.

> The most useful way to read a chart like this one is as a description of *structure* — where the pressure sits, which faculties are well supplied and which are not, and when the emphasis shifts. Treat the dates as the centres of windows rather than as switches, and treat the readings as hypotheses to test against your own experience rather than as findings.

Conventions used

Zodiac	Sidereal (*nirayana*), Lahiri / Chitrapaksha ayanamsa
Houses	Whole-sign (*rasi* = *bhava*) throughout; Placidus cusps are given once for reference in Chapter 1
Nodes	Mean node (the convention of the *Indian Astronomical Ephemeris*); the true node differs here by 0.21°
Dasha	Vimshottari, 120-year cycle, 365.2425 days per year
Aspects	Parashari *graha drishti* (full 7th for all; plus 4th/8th for Mars, 5th/9th for Jupiter, 3rd/10th for Saturn)
Strength	Shadbala in *virupas* (60 virupas = 1 *rupa*), against Parashara's minimum requirement per planet
Planet codes	Su Sun, Mo Moon, Ma Mars, Me Mercury, Ju Jupiter, Ve Venus, Sa Saturn, Ra Rahu, Ke Ketu; superscript R denotes retrograde

4 Minor Dashas: Antardasha and Pratyantardasha 24
4.1 Antardasha and Pratyantardasha: Periods and Readings . . . 24
4.1.1 Method: how the subdivisions are computed . . . 24
4.1.2 The interpretive rule set for minor periods . . . 25
4.1.3 Complete Antardasha tables, 1980 to 2098 . . . 25
4.1.4 The current period: Jupiter / Ketu, 2026-09-04 to 2027-08-11 . . . 28
4.1.5 Jupiter / Venus, 2027-08-11 to 2030-04-11: the constructive window . . . 30
4.1.6 Closing Antardashas of the Jupiter Mahadasha . . . 31
4.1.7 Forward note: the opening of the Saturn Mahadasha . . . 32

5 Yogas 33
5.1 Yogas . . . 33
5.1.1 Summary of combinations tested . . . 33
5.1.2 Guru-Mangala Yoga: an exceptionally tight conjunction . . . 34
5.1.3 Guru-Chandala Yoga: the counterweight . . . 35
5.1.4 Angaraka Yoga in the 4th house . . . 35
5.1.5 Budha-Aditya Yoga: dignity meeting weak placement . . . 35
5.1.6 Saturn as sole Yogakaraka: the chart's central contradiction . . . 35
5.1.7 Raja Yogas by association, and one exchange . . . 36
5.1.8 Dhana indication: the cleanest signature in the chart . . . 36
5.1.9 Shakata Yoga and why it is heavily restricted . . . 37
5.1.10 Chandra-Adhi Yoga: partial only . . . 37
5.1.11 Kemadruma Yoga: present by letter, cancelled in fact . . . 37
5.1.12 Notable absences . . . 38
5.1.13 Kuja (Mangal) Dosha: a balanced verdict . . . 38

6 Gunas 40
6.1 Gunas: The Three Qualities . . . 40
6.1.1 Doctrine before measurement . . . 40
6.1.2 How the gunas enter Jyotisha . . . 40
6.1.3 The quantified profile . . . 40

6.1.4 Reading the profile . . . 41
6.1.5 Nakshatra- and sign-level guna . . . 42
6.1.6 Guna and the dasha sequence . . . 43
6.1.7 Working with this configuration . . . 43
6.1.8 Two sensitivities bearing on this section . . . 44

7 Dwandwas and Shortcomings **45**
7.1 Dwandwas: Structural Polarities . . . 45
7.1.1 Exalted Sun in the Twelfth . . . 45
7.1.2 The Fourth Against the Tenth: The Nodal Axis . . . 45
7.1.3 Jupiter with Rahu: Orthodoxy Against Transgression . . . 46
7.1.4 Mars Fused with Jupiter at Eleven Arc-Minutes . . . 46
7.1.5 Saturn the Yogakaraka: Capability Against Timing . . . 46
7.1.6 The Yoni Opposition: Mongoose Against Serpent . . . 47
7.1.7 The Gana Mismatch . . . 47
7.1.8 Rahu as Atmakaraka with a Vargottama Moon . . . 47
7.1.9 Low Rajas with a Crowded Mars-Rahu Fourth . . . 47
7.2 Shortcomings and Areas of Caution . . . 48
7.2.1 No Panchamahapurusha Yoga . . . 48
7.2.2 Combust Mercury as Lord of the Second and Fifth . . . 48
7.2.3 Saturn's Single Bindu, and Nineteen Years from 2035 . . . 48
7.2.4 The Weak Third and Eighth . . . 49
7.2.5 Seven Empty Houses . . . 49
7.2.6 Kuja Dosha from Lagna and from Moon . . . 49
7.2.7 Shakata Yoga . . . 49
7.2.8 Jupiter Ruling the Eighth . . . 50
7.2.9 An Empty Lagna with Its Lord in the Second . . . 50
7.2.10 The Largest Source of Error: Seven and a Half Minutes . . . 50

8 Numerology **52**
8.1 Numerology . . . 52
8.1.1 The Core Date Numbers . . . 52
8.1.2 Namank – the Name Numbers . . . 53
8.1.3 The Cross-Check Against the Horoscope . . . 54
8.1.4 Lo Shu Grid . . . 55
8.1.5 Personal Year Cycle . . . 56
8.1.6 Favourable and Guarded Sets . . . 56

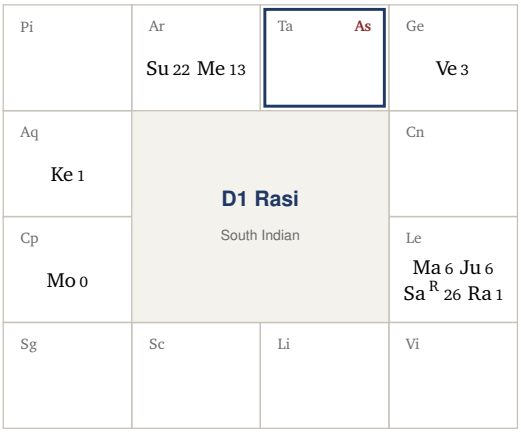

9 Gem Report and Remedial Measures **58**
9.1 Ratna Vichara: Gem Report . . . 58
9.1.1 Doctrine and framework . . . 58
9.1.2 The controversy, and which side this report takes . . . 59

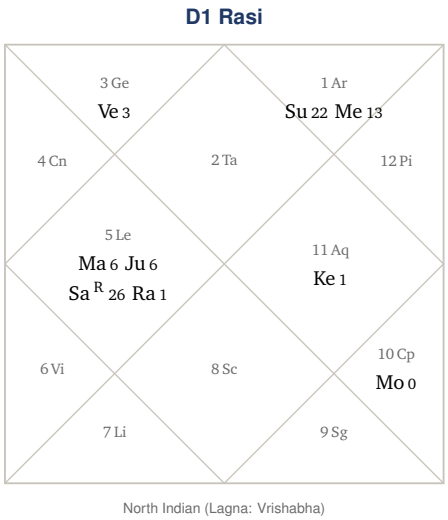

9.1.3 Recommended, primary: diamond for Venus 59
9.1.4 Recommended, secondary: pearl for the Moon 60
9.1.5 Consider with care: yellow sapphire for Jupiter 60
9.1.6 Not without expert supervision: blue sapphire for Saturn 60
9.1.7 Avoid: red coral for Mars 61
9.1.8 Avoid: hessonite and cat's eye 61
9.1.9 A genuine judgement call: emerald for Mercury 61
9.1.10 Not needed: ruby for the Sun 62
9.1.11 Summary 62
9.1.12 Practical and ethical notes 62
9.2 Remedial Measures (Upaya) 63

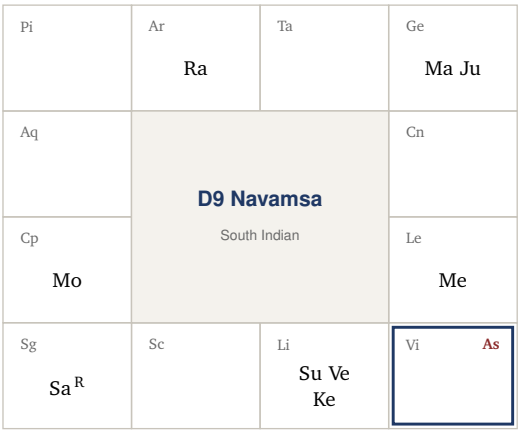

A Computational Appendix **65**
A.1 Reproducing these figures 65
A.2 Full computed output 65

CHAPTER 1

Chart Fundamentals

The two upper diagrams show the same *Rasi* (D1) chart in the two standard Indian formats. In the **South Indian** chart the signs are fixed in position and the Ascendant is marked **As**; in the **North Indian** chart the houses are fixed and the signs rotate, so house 1 is always the top-centre diamond. The lower pair give the **D9 Navamsa** (the primary divisional chart, read for inner strength, marriage and the second half of life) and the **D10 Dasamsa** (read for career and public action). Numbers beside each planet are whole degrees within the sign.

1.1 Chart Fundamentals and Methodology

1.1.1 Provenance of the Calculations

One point of housekeeping, because it is often got wrong: there is **no ephemeris published by the Indian Institute of Science.** The authoritative Indian positional source is the *Indian Astronomical Ephemeris*, published by the Positional Astronomy Centre (PAC) of the India Meteorological Department, Kolkata, which also issues the official *Rashtriya Panchang*. The *ayanamsa* standard of the Government of India is Lahiri (Chitrapaksha), adopted on the recommendation of the Calendar Reform Committee of 1955 chaired by Meghnad Saha.

This report uses the Swiss Ephemeris (JPL DE431) in sidereal mode with Lahiri *ayanamsa*, whose value for the birth moment is **23°34’57"** (23.582531°) — agreeing with the *Indian Astronomical Ephemeris* to within arc-seconds. Nothing below turns on the software. What it does turn on is the recorded clock time.

1.1.2 Birth Data

Date and time	6 May 1980, 08:25:00 IST (UTC +5:30) = 02:55:00 UT
Place	Jayanagar, Bangalore, Karnataka, India

Item	**Value**
Latitude / Longitude	12.9250° N, 77.5938° E
Julian Day (UT)	2444365.621527778
Ayanamsa (Lahiri)	23°34’57"
Sunrise / Sunset	05:58:17 / 18:34:15 IST
Day length	12.5996 hours (12h 35m 59s)
Birth after sunrise	2.4454 hours (2h 26m 43s)
Ascendant	Vrishabha (Taurus) 28°15’06", Mrigashira *pada* 2
Midheaven (MC)	Kumbha (Aquarius) 20°38’32"
Moon sign (*rasi*)	Makara (Capricorn) 0°13’28"
Janma nakshatra	Uttara Ashadha *pada* 2, lord Sun
Dasha balance at birth	Sun 4.399060 years (1606.7 days)

1.1.3 Panchanga

A daytime birth, 2.4454 hours after sunrise, in the waning fortnight. Sun–Moon elongation 248.07059°.

Limb	**Value**	**Elapsed**
Tithi	Krishna Shashthi (no. 21)	67.25%
Vara	Tuesday (lord Mars)	19.4% of the 12.5996h day
Nakshatra	Uttara Ashadha *pada* 2 (lord Sun)	26.68%
Yoga	Sadhya (no. 22)	92.84%
Karana	Vanija (no. 42)	34.5% (derived from the *tithi* fraction)
Paksha	Krishna (waning)	—

Only one limb sits near a junction: Sadhya at 92.84% elapsed has about 1.6 hours left at the combined Sun-plus-Moon rate of 14.2567° per day. The *nakshatra* has 9°46’ of Moon travel remaining, roughly 17.7 hours, so Uttara Ashadha itself is secure. Gulika/Mandi falls at Karka 21°16’, the same sign as the Arudha Lagna.

1.1.4 Birth-Time Sensitivity: the Single Most Important Caveat

The Ascendant is at Vrishabha 28°15’06", with 1°44’54" of Taurus left to rise.

Window	**Interval (IST, 6 May 1980, Bangalore)**
Taurus rising	06:30 to 08:32:28
Recorded birth	08:25:00
Margin to Gemini	7 minutes 28 seconds
Gemini rising begins	08:32:28

> The recorded time is 7.5 minutes from a Lagna change. Hospital records, and family recollection far more so, are routinely rounded to the nearest five or ten minutes, and "08:25" is exactly the kind of figure that is such a rounding — including, possibly, of a genuine 08:33. Everything here assumes **Taurus** rising. If the hospital record shows a later time, the whole house framework shifts one sign and this reading must be re-run.

What changes under Gemini Lagna is structural, not cosmetic.

Feature	Under Gemini Lagna instead of Taurus
Lagna lord	Mercury, not Venus — and Mercury is *combust* (8°25' from the Sun), so the Lagna lord becomes an afflicted planet.
Yogakaraka	Gone. For Gemini, Venus rules the 5th and 12th and Saturn the 8th and 9th; Saturn becomes an 8th-lord, Jupiter takes the 7th and 10th, and the chart's central *raja yoga* claim dissolves.
Leo stellium	Moves from the 4th to the **3rd** — from home, mother and inner foundation to initiative, siblings and courage.
Moon	Moves from the 9th to the **8th**. A vargottama Moon in the 9th and one in the 8th are opposite readings, not variants.
Sun and Mercury	Move from the 12th to the 11th; Venus moves from the 2nd to the 1st, a 12th-lord in the Lagna.

The *nakshatra* layer is far more stable. The Moon is 13'27.5" into Uttara Ashadha *pada* 2; at 13.2888° per day (33.2 arc-seconds per clock minute) it entered *pada* 2 at approximately 08:00 IST. So the *janma nakshatra* is Uttara Ashadha and the first *mahadasha* is the Sun's on any plausible reading. What moves is the **balance**: across the 13°20' *nakshatra* mapped onto the Sun's 6-year period (2191.5 days, i.e. 2.739 days per arc-minute of lunar travel), that is about **1.5 days of *dasha* balance per minute of clock error** — roughly 6 days for a 4-minute error, about 11 days across the full 7.5-minute gap to the Gemini boundary. Small absolutely, but it propagates to every finer *dasha* boundary quoted later.

> **Recommendation: have the birth time rectified.** Obtain the primary document — hospital labour register or municipal birth certificate — rather than a remembered time. If the primary record is itself rounded or unavailable, a formal rectification against two or three firmly dated life events is worth commissioning before any weight is placed on the house framework.

1.1.5 Planetary Positions

Body	Sid. lon.	Sign	Deg in sign	Nakshatra	Pada	Nak. lord
Ascendant	58.2516	Vrishabha	28°15'06"	Mrigashira	2	Mars
Sun	22.1537	Mesha	22°09'13"	Bharani	3	Venus
Moon	270.2243	Makara	0°13'28"	Uttara Ashadha	2	Sun
Mars	126.9895	Simha	6°59'22"	Magha	3	Ketu
Mercury	13.7316	Mesha	13°43'54"	Bharani	1	Venus
Jupiter	126.8070	Simha	6°48'25"	Magha	3	Ketu
Venus	63.0733	Mithuna	3°04'24"	Mrigashira	3	Mars
Saturn	146.8434	Simha	26°50'36"	Uttara Phalguni	1	Sun
Rahu (mean)	121.6372	Simha	1°38'14"	Magha	1	Ketu
Ketu (mean)	301.6372	Kumbha	1°38'14"	Dhanishta	3	Mars
Rahu (true)	121.8423	Simha	1°50'32"	Magha	1	Ketu

Body	Sid. lon.	Sign	Deg in sign	Nakshatra	Pada	Nak. lord
Ketu (true)	301.8423	Kumbha	1°50’32"	Dhanishta	3	Mars

Mean nodes are used throughout; the true-node difference of 12’18" changes no sign, *nakshatra* or *pada* here, so the choice is immaterial in this chart.

Planet	Dignity	State	House	Rules
Sun	Exalted (*uccha*) in Mesha	Direct, 0.9679°/d	12	4
Moon	Neutral sign (Makara)	Direct, 13.2888°/d; VARGOTTAMA	9	3
Mars	Friend’s sign (Simha)	Direct, 0.2889°/d	4	7, 12
Mercury	Neutral sign (Mesha)	Direct; COMBUST, 8°25’ from Sun	12	2, 5
Jupiter	Friend’s sign (Simha)	Direct, 0.0296°/d (near station)	4	8, 11
Venus	Friend’s sign (Mithuna)	Direct, 0.5767°/d	2	1, 6
Saturn	Enemy’s sign (Simha)	RETROGRADE, −0.0278°/d	4	9, 10
Rahu	— (*chaya graha*)	Always retrograde	4	—
Ketu	— (*chaya graha*)	Always retrograde	10	—

1.1.6 House Lordships and the Sole Yogakaraka

For Vrishabha Lagna: 1 and 6 Venus; 2 and 5 Mercury; 3 Moon; 4 Sun; 7 and 12 Mars; 8 and 11 Jupiter; 9 and 10 Saturn.

> **Saturn rules both the 9th (Makara) and the 10th (Kumbha), making it the sole *yogakaraka* of this chart** — the only planet owning a *trikona* and a *kendra* together, which is Parashara’s own definition of an intrinsic *raja yoga* — and it sits in a *kendra*, the 4th. On paper this is the chart’s strongest structural claim.

> The delivery conditions on that *yoga* are poor, and this should be said plainly. Saturn is in Simha, the sign of its enemy the Sun; it is **retrograde**; its *kala bala* is only **67.2**, the lowest of the seven (against Mercury’s 204.8 and Jupiter’s 182.2), even though its six-fold total of 409.0 clears its 300-*virupa* requirement at 136%; and it has **1 *bindu*** in its own *Bhinnashtakavarga* for Simha, the lowest own-sign score of any planet here. Parashara’s *cheshta bala* rule rewards retrogression (Saturn scores the full 60.0); several later digests go further and hold a retrograde planet in an enemy sign to behave as if exalted — a *contested* claim I report only as something the tradition says. The conservative reading, which B.V. Raman among moderns favours, is that such a planet delivers late, out of sequence and with repeated revision rather than not at all. The *yoga* is structurally present; its mechanism is impeded.

1.1.7 House Occupancy, and Why Bhava Chalit Differs

Whole-sign (*rasi*) houses from Taurus Lagna, used throughout this report:

House	Sign	SAV	Occupants
1	Vrishabha (Venus)	28	—
2	Mithuna (Mercury)	38	Venus
3	Karka (Moon)	22	—
4	Simha (Sun)	27	Mars, Jupiter, Saturn (R), Rahu
5	Kanya (Mercury)	24	—
6	Tula (Venus)	26	—
7	Vrischika (Mars)	29	—
8	Dhanu (Jupiter)	23	—
9	Makara (Saturn)	27	Moon
10	Kumbha (Saturn)	36	Ketu
11	Meena (Jupiter)	32	—
12	Mesha (Mars)	25	Sun, Mercury

Total *Sarvashtakavarga* is 337 *bindus*. Strongest signs: Mithuna (38), Kumbha (36), Meena (32), Vrischika (29); weakest: Karka (22), Dhanu (23), Kanya (24), Mesha (25). Note the pattern — the 2nd, 10th and 11th carry the highest counts, while the 4th, holding four planets, carries a middling 27. Occupancy and *bindu* support point in different directions: a genuine tension, not an artefact.

The Placidus cusps tell a different story. Read as house *beginnings* in the Western manner, the quadrant chart puts Mars (126.99°), Jupiter (126.81°) and Rahu (121.64°) in the **3rd**, the 4th cusp arriving only at Simha 20°38’32"; Saturn at Simha 26°50’36" is past that cusp, in the quadrant 4th but only 19% through it, and, being retrograde, drifting back toward the 4th cusp rather than onward to the 5th. Read as *bhava madhya* in the Sripati manner — the cusp being the *middle* of the *bhava* — Mars, Jupiter and Saturn stay in the 4th *bhava* (125.68° to 157.20°) and Rahu falls back into the 3rd.

> Two *chalit* shifts bear on claims made elsewhere. The **Moon at 270.22° falls between the 8th Placidus cusp (Dhanu 24°01’) and the 9th (Makara 20°43’)** — the 8th *bhava* on both the quadrant and the Sripati reckoning, not the 9th; “vargottama Moon in the house of fortune” is a whole-sign reading that does not survive into *chalit*. And **Venus at Mithuna 3°04’ falls inside the 1st *bhava*** (which runs to Mithuna 24°01’), not the 2nd, weakening the *dhana yoga* reading of Lagna-lord-in-the-2nd. Classical Parashari practice is whole-sign and that is what is used here; practitioners who weight *bhava chalit* read this chart appreciably differently, and are not wrong to.

1.1.8 Strength Measures

Shadbala in *virupas* (60 *virupas* = 1 *rupa*):

Planet	Sthana	Dig	Kala	Cheshta	Naisarga	Drik	Total	Req.	Pct
Jupiter	218.1	37.1	182.2	60.0	34.3	14.1	545.9	390	140%
Sun	194.7	39.5	174.1	50.7	60.0	0.4	519.4	390	133%
Mercury	163.3	45.2	204.8	30.7	25.7	0.4	470.0	420	112%
Venus	158.0	34.1	152.3	60.0	42.9	−1.5	445.7	330	135%
Saturn	226.0	29.5	67.2	60.0	8.6	17.6	409.0	300	136%
Moon	161.6	16.8	135.9	37.3	51.4	3.4	406.5	360	113%
Mars	175.5	4.6	101.1	58.5	17.1	14.1	370.8	300	124%

Every planet clears its requirement, which is unusual and is the chart’s most encouraging single fact. By absolute total: Jupiter (9.10 *rupas*) > Sun (8.66) > Mercury (7.83) > Venus (7.43) > Saturn

(6.82) > Moon (6.77) > Mars (6.18). By percentage: Jupiter (140%) > Saturn (136%) > Venus (135%) > Sun (133%) > Mars (124%) > Moon (113%) > Mercury (112%).

Vimsopaka bala across the sixteen divisions (maximum 20) ranks differently: Saturn 10.31 (good), Venus 9.56, Sun 9.44, Mars 8.12, Moon 7.00, Mercury 6.62, **Jupiter 5.94** — all but Saturn in the "moderate" band. That Jupiter tops *Shadbala* and comes *last* on *Vimsopaka* is the central methodological fork here: *Shadbala* measures capacity to act in the *rasi*, *Vimsopaka* how well a planet holds together across the divisions. Jupiter is loud and shallow in this chart; Saturn is quiet and deep.

1.1.9 Planet by Planet

Sun — exalted in Mesha 22°09', 12th house, rules the 4th.
519.4 *virupas*, 133%, full *naisargika bala* (60.0), 5 *bindus*, *Vimsopaka* 9.44. Also *janma nakshatra* lord and lord of Simha, so it dispositors half the chart. Exaltation in the 12th is a classical paradox: *Phaladeepika* treats the 12th as loss and expenditure, yet an exalted 4th-lord there signifies strength spent on withdrawal, research and private or foreign spheres rather than on display. *Counterweight*: the Sun is in Tula in *navamsa*, its debility — self-authority strong in principle, brittle under examination. Aspects the 6th.

Moon — Makara 0°13', 9th house, rules the 3rd, VARGOTTAMA.
406.5 *virupas*, 113%; *dig bala* only 16.8 (the Moon wants the 4th); 5 *bindus*; *Vimsopaka* 7.00. *Darakaraka*. Treated separately below.

Mars — Simha 6°59', 4th house, rules the 7th and 12th.
370.8 *virupas*, 124%, the weakest absolute total here, with *dig bala* of **4.6 out of 60** — Mars draws directional strength from the 10th and sits in the 4th, its exact nadir. 4 *bindus*; *Vimsopaka* 8.12. *Pitrikaraka* and *vara* lord. As 7th and 12th lord in the 4th it classically indicates partnership and the private sphere worked out through home and foundations. Aspects the 7th (Vrischika, its own sign), 10th and 11th.

Mercury — Mesha 13°44', 12th house, rules the 2nd and 5th, COMBUST.
470.0 *virupas* against the highest requirement of any planet (420), giving the *lowest* percentage here, 112%; best *dig bala* of the seven (45.2) and highest *kala bala* (204.8); 5 *bindus*; *Vimsopaka* 6.62. Combustion at 8°25' is inside every stated limit — authorities quote roughly 12° to 14° for a direct Mercury — so the affliction is real on any reckoning. A 2nd and 5th lord (speech, resources, intelligence) combust in the 12th signifies capability genuinely present and chronically under-displayed. *Matrikaraka*. Aspects the 6th.

Jupiter — Simha 6°48', 4th house, rules the 8th and 11th.
Strongest by *Shadbala*: 545.9 *virupas*, 140%, *cheshta bala* at maximum 60.0, moving only 0.0296° per day and so effectively stationary. But 4 *bindus* and the chart's *lowest Vimsopaka*, 5.94. A mixed portfolio as 8th and 11th lord: gains and networks on one side, transformation and hidden matters on the other. *Putrakaraka*. Aspects the 8th, 10th and 12th.

Venus — Mithuna 3°04', 2nd house, rules the 1st and 6th.
Lagna lord. 445.7 *virupas*, 135%, *cheshta bala* 60.0, and **6 *bindus* in Mithuna, the highest own-sign count in the chart**, in the sign carrying the highest *Sarvashtakavarga* total (38). *Vimsopaka* 9.56, second only to Saturn, and Venus is in its own Tula in *navamsa*. Lagna lord in the 2nd in a friend's sign with that *bindu* support is a textbook *dhana* signature, as *Saravali* and the later *dhana-yoga* literature treat it. The chart's only *drik bala* deficit is Venus's, −1.5. *Gnatikaraka*. Aspects the 8th.

Saturn — Simha 26°50', 4th house, RETROGRADE, rules the 9th and 10th.
The *yogakaraka*, treated above. 409.0 *virupas*, 136%, on the highest *sthana bala* here (226.0) with the lowest *kala bala* (67.2) and *naisargika bala* (8.6); 1 *bindu*; highest *Vimsopaka*, 10.31. By its

7th-house *drishti* it aspects Kumbha, its own 10th house, where Ketu sits; by its special 10th-house *drishti*, the Lagna itself; by its 3rd, the 6th. A *yogakaraka* aspecting both the Lagna and its own 10th is a strong configuration on its face. *Amatyakaraka*.

Rahu — Simha 1°38', 4th house.
No rulership. *Atmakaraka* (below), conjunct Mars at 5°21' and Jupiter at 5°10'. Whether Rahu casts *drishti* at all is disputed: the school giving it Jupiter-like 5/7/9 aspects would have it aspecting the 8th, 10th and 12th, but Parashara assigns *drishti* to the seven *grahas*.

Ketu — Kumbha 1°38', 10th house.
No rulership. In Dhanishta *pada* 3, in the *yogakaraka*'s sign, in the house with the second-highest *Sarvashtakavarga* count (36), receiving Saturn's 7th-house aspect. Ketu in the 10th classically indicates detachment from, or repeated redefinition of, the terms of public work rather than its absence.

1.1.10 The Leo Stellium in the Fourth House

Four bodies — Mars, Jupiter, retrograde Saturn and Rahu — occupy Simha, the 4th house. This is the single dominant structural feature of the chart, and most other readings depend on it.

Pair	Orb	Reading
Mars + Jupiter	0°11' (0.183°)	*Guru-Mangala yoga*, exceptionally tight
Mars + Rahu	5°21'	*Angaraka yoga*
Jupiter + Rahu	5°10'	The combination popularly called *Guru-Chandala*
Mars + Saturn	19°51'	Same sign only; too wide for conjunction effects
Jupiter + Saturn	20°02'	Same sign only
Saturn + Rahu	25°12'	Same sign only

First, the Mars–Jupiter contact at an **11 arc-minute orb** is extraordinary. An orb that tight is not merely a *rasi* conjunction: the two occupy the *same sign in all sixteen divisions* of the *Shodasavarga* — verifiable row by row in the table below. A fused discipline-plus-expansion reproducing itself at every level of magnification is, classically, the most robust thing in this chart. *Saravali* reads Mars with Jupiter as conferring directness and capacity for undertakings; the standing caution is impatience with process.

Second, the cluster sets up a *raja yoga* by conjunction: Mars, a *kendra* lord (7th and 12th), with Saturn, a *trikona* lord (9th and 10th), in a *kendra*. Parashara's criterion is met. But they are 19°51' apart — same sign, not effective conjunction — and authorities differ on whether sign co-tenancy suffices: Parashara speaks of association broadly, while the orb-conscious later tradition and *Brihat Jataka* on conjunction effects are stricter. The *yoga* is present by sign, weak by orb.

Third, this is a loaded 4th house with only 27 *bindus* and four occupants of very unequal condition. *Kuja dosha* is present from the Lagna (Mars in the 4th) and from the Moon (Mars 8th from it), absent from Venus (Mars 3rd from Venus). Two classical mitigations apply: Mars conjunct Jupiter at an 11 arc-minute orb, which compendia including *Mansagari* treat as a cancellation, and Mars in Simha, the Sun's sign, which several authorities exempt — against which Mars does aspect the 7th house by its special fourth *drishti*. *The honest position*: the *dosha* is technically present, the mitigations are substantial, and the modern literature — B.V. Raman notably — treats *Kuja dosha* as a temperamental indicator about the handling of intensity and friction, not a fate. The agency remains the native's.

Three further yogas belong here. *Shakata yoga* (the Moon 6th from Jupiter) is *contested* — absent from *Brihat Jataka*, a later-digest construction with widely varying cancellation clauses, and the Moon's vargottama condition is commonly cited as neutralising it; I note it and do not weight it. *Kemadruma yoga* is technically formed (nothing in the 2nd or 12th from the Moon) but cancelled twice over: Sun and Mercury occupy Mesha, a *kendra* from the Moon, and the Moon is vargottama. *Kala Sarpa* is

absent — the Rahu-to-Ketu arc holds Moon, Mars, Jupiter and Saturn while the Ketu-to-Rahu arc holds Sun, Mercury and Venus, so the configuration does not form.

One further detected *yoga* falls outside the stellium. *Budha-Aditya yoga* is present in Mesha, the 12th, by co-tenancy of the exalted Sun with Mercury — lord of the 2nd and 5th — at an orb of 8°25'. But that orb is Mercury's combustion arc: it is the same measurement, so the *yoga*'s own mechanism is the affliction. The fusion of intelligence with authority that *Budha-Aditya* signifies is formed here under eclipse rather than cleanly, which is consistent with the reading already given of a 2nd and 5th lord capable but chronically under-displayed.

1.1.11 The Vargottama Moon

> The Moon is in Makara in the *rasi* (D1) and in Makara in the *navamsa* (D9). It is the **only vargottama body in the chart**, and this is the cleanest strength the horoscope contains: a vargottama planet is held across the tradition to act with its significations undiluted.

In whole-sign terms this is a vargottama Moon as 3rd lord in the 9th house of *dharma* and fortune, in the *yogakaraka*'s sign, with 5 *bindus* and 406.5 *virupas* (113%); it is also the *Darakaraka* and the chart's most internally consistent planet. At 0°13'28" of a sign it is in *sandhi*, which some authorities count a weakness and the vargottama condition is generally held to outweigh. Two caveats already given apply: both *bhava chalit* and a Gemini Lagna would put this Moon in the 8th rather than the 9th. The vargottama fact itself is independent of the Lagna and survives both.

1.1.12 Shodasavarga

Varga	Asc	Su	Mo	Ma	Me	Ju	Ve	Sa	Ra	Ke
D1 Rasi	Ta	Ar	Cp	Le	Ar	Le	Ge	Le	Le	Aq
D2 Hora	Le	Cn	Cn	Le	Le	Le	Le	Cn	Le	Le
D3 Drekkana	Cp	Sg	Cp	Le	Le	Le	Ge	Ar	Le	Aq
D4 Chaturthamsa	Aq	Li	Cp	Le	Cn	Le	Ge	Ta	Le	Aq
D7 Saptamsa	Ta	Vi	Cn	Vi	Cn	Vi	Ge	Aq	Le	Aq
D9 Navamsa	Vi	Li	Cp	Ge	Le	Ge	Li	Sg	Ar	Li
D10 Dasamsa	Li	Sc	Vi	Li	Le	Li	Cn	Ar	Le	Aq
D12 Dwadasamsa	Ar	Sg	Cp	Li	Vi	Li	Cn	Ge	Le	Aq
D16 Shodasamsa	Sc	Pi	Ar	Sc	Sc	Sc	Cp	Li	Le	Le
D20 Vimsamsa	Ge	Ge	Ar	Ar	Cp	Ar	Li	Ta	Cp	Cp
D24 Chaturvimsamsa	Ta	Cp	Cn	Cp	Ge	Cp	Li	Ta	Vi	Vi
D27 Bhamsa	Le	Sc	Cn	Li	Ar	Li	Sg	Ar	Ta	Sc
D30 Trimsamsa	Ar	Ge	Li	Aq	Sg	Aq	Ar	Li	Ar	Ar
D40 Khavedamsa	Sc	Vi	Li	Cp	Li	Cp	Le	Pi	Ge	Ge
D45 Akshavedamsa	Aq	Cp	Ar	Ge	Sg	Ge	Ar	Sg	Li	Li
D60 Shashtiamsa	Cp	Sg	Cp	Vi	Cn	Vi	Sg	Cp	Sc	Ta

D9 Navamsa — the chart's underlying substance. *Lagnamsa* is Kanya (Virgo), lord Mercury, and Mercury is combust in the *rasi*: the *navamsa* Lagna lord is afflicted. The Moon is vargottama in Makara; Venus, the *rasi* Lagna lord, is in its own Tula, a second confirmation of Venus as a genuine asset; the Sun is in Tula, its debility, counterweight to its *rasi* exaltation. Mars and Jupiter are together again, in Mithuna.

D10 Dasamsa — work and public function. The *Dasamsa* Lagna is Tula, lord Venus, the same planet that rules the *rasi* Lagna — a tidy convergence. **Mars and Jupiter both sit in that Tula Lagna**, placing the tight *Guru-Mangala* fusion on the first house of the career chart, and Venus occupies Karka, the 10th from it. Against this, **Saturn — the *yogakaraka* — is in Mesha in D10, its sign of debility**. What that signifies is capacity and visibility in the work sphere coexisting with friction in the mechanism of advancement: the same tension already seen between Saturn's *Shadbala* and its single *bindu*.

D60 Shashtiamsa — the finest division, to which Parashara gives the highest *Shodasavarga* weight. The *Shashtiamsa* Lagna is Makara, the sign the Moon occupies in the *rasi* chart, and the **Moon itself falls in Makara in D60**, in that Lagna. **Saturn is in Makara in D60 as well — its own sign, falling in the D60 Lagna itself**. Saturn reaches higher raw dignity elsewhere in the scheme (exalted in Tula in both D16 and D30, own sign Kumbha in D7), but D60 carries the heaviest *Shodasavarga* weight, which is the likeliest reason its *Vimsopaka* is the chart's highest at 10.31. Mars and Jupiter are once more together, in Kanya.

1.1.13 Jaimini Chara Karakas

The eight *chara karakas* are assigned by descending degree within sign, with Rahu counted in reverse (30° minus its degree), which gives Rahu 28°21'46" and the top position.

Karaka	**Planet**	**Degree**
Atmakaraka (self, soul)	Rahu	28°21'46" in Simha (reverse-counted)
Amatyakaraka (minister, career)	Saturn	26°50'36" in Simha
Bhratrikaraka (siblings, guru)	Sun	22°09'13" in Mesha
Matrikaraka (mother)	Mercury	13°43'54" in Mesha
Pitrikaraka (father)	Mars	6°59'22" in Simha
Putrakaraka (children)	Jupiter	6°48'25" in Simha
Gnatikaraka (obstacles)	Venus	3°04'24" in Mithuna
Darakaraka (spouse)	Moon	0°13'28" in Makara
Karakamsa	Mesha — Rahu's *navamsa* sign	
Swamsa / Lagnamsa	Kanya — the Ascendant's *navamsa* sign	

Rahu as *Atmakaraka* is unusual and significant. In the *Jaimini Upadesa Sutras* the *Atmakaraka* is king among the *karakas* — the planet carrying the soul's own agenda, whose condition conditions everything else and whose dissatisfactions cannot be delegated. When a *chaya graha* holds that office, the classical reading is of a self defined by direction and appetite rather than by substance: Rahu signifies amplification, boundary-crossing, the pursuit of what the tradition did not hand down, and a chronic insufficiency of arrival. A Rahu *Atmakaraka* classically indicates a life organised around a hunger that keeps re-specifying its object; the Jaimini prescription is correspondingly a discipline of sufficiency rather than of acquisition. It sits in the 4th-house stellium, so soul-significator and dominant configuration are the same piece of sky, with Saturn as *Amatyakaraka* beside it — structure as the instrument of that hunger.

> This rests on a methodological choice. A substantial Jaimini school **excludes the nodes from the *chara karaka* scheme altogether**; others include Rahu reverse-counted but exclude Ketu, the convention used here. If Rahu is excluded, **Saturn** at 26°50'36" becomes *Atmakaraka*, the Sun *Amatyakaraka*, and the *Karakamsa* shifts from Mesha to **Dhanu** — a materially different reading of the same chart. The two traditions do not reconcile; I use the Rahu-inclusive calculation as the more widely used and flag the fork rather than conceal it.

1.1.14 Arudha Lagna and Upapada

Arudha Lagna (AL)	Karka (Cancer) — the 3rd house from Lagna
Upapada (UL)	Dhanu (Sagittarius) — the 8th house from Lagna

The AL — the image rather than the substance of the self, counted from the Lagna to its lord and the same distance onward (Vrishabha, lord Venus in Mithuna, two signs on to Karka) — falls in the chart's *weakest* sign by *Sarvashtakavarga* (Karka, 22 *bindus*), untenanted but for Gulika, ruled by the vargottama Moon in the 9th: a public image thinly supported in itself, deriving what weight it carries from its lord's condition elsewhere.

The *Upapada* (the *arudha* of the 12th, Mesha, whose lord Mars sits in Simha) falls in Dhanu, the 8th from the Lagna, untenanted, with 23 *bindus* — the second-weakest sign here — ruled by Jupiter in the 4th-house stellium; a UL so placed classically indicates partnership and its public form being read through transformation and revision rather than straightforward continuity. As throughout, these describe configurations and tendencies, not events.

CHAPTER 2

Rashi and Nakshatra

2.1 Rashi and Nakshatra Report

All positions below are Swiss Ephemeris sidereal longitudes with Lahiri ayanamsa 23°34′57” for 6 May 1980, 08:25 IST at 12.9250 N 77.5938 E.

2.1.1 Janma Rashi: Chandra in Makara

Moon	Makara (Capricorn) 0°13′27.5”, sidereal longitude 270.2243°
Sign lord	Saturn – earth element, *chara* (movable) sign
House	9th from Vrishabha Lagna (whole-sign)
Dignity	Neutral sign; **VARGOTTAMA** (D1 Makara = D9 Makara)
Strength (113%)	Shadbala 406.5 virupas = 6.77 *rupas* against a 360-virupa requirement

A Saturn-ruled lunar mind is the most structurally organised of the twelve: the emotional apparatus runs on architecture, not enthusiasm. Classically this placement indicates a temperament patient, duty-bound, economical with display, slow to show feeling and slower still to withdraw it once given, ambitious through endurance rather than flourish. *Phaladeepika* and *Saravali* both describe the Capricorn Moon in terms of thrift, persistence, a reserved exterior, and a tendency to carry responsibility that was never formally assigned.

This needs qualifying at once, because the Moon stands at the *very first degree* of Makara – thirteen arc-minutes in, having just crossed out of Dhanu. *Sandhi* (junction) degrees classically carry residue of the sign just vacated, and here that residue is Jupiterian: idealism, a philosophical cast to the feeling-life. The Saturnine note is real but not austere; the chart points toward a disciplined mind that requires a doctrine, not merely a task list.

- **Ninth house.** Makara is the 9th from Taurus: *dharma*, father, teachers and preceptors, long journeys, higher philosophy, the fruits of accumulated merit. A Moon here indicates an emotional centre of gravity lodged in belief and in teaching relationships rather than in domestic routine.
- **Vargottama.** The Moon holds Makara in both *rashi* and *navamsa*. Parashara treats *vargottama* as a multiplier of what a planet already signifies, so a *vargottama* 9th-house Moon is a genuinely strong fortune indicator. It also cancels the latent *Kemadruma Yoga* (no planet in the 2nd or 12th from the Moon), the chart resting that cancellation on Sun and Mercury in a *kendra* from the Moon (4th = Mesha) *plus* the *vargottama* status.
- **Moon–Saturn binding.** Saturn is the Moon’s dispositor; it rules both the 9th and 10th from Taurus and is the chart’s **sole Yogakaraka**; and it is the Jaimini *Amatyakaraka* (career) at 26.8434° in Simha. Three reckonings put one planet in charge of the emotional life, indicating feeling and vocational duty as a single circuit: the mood follows the work, and the work is met as obligation rather than option.

Strength deserves honesty. The Moon clears 406.5 against 360 on *sthana* and *kala bala*, but its *digbala* is 16.8 virupas, second-lowest of the seven grahas (only Mars, at 4.6, is lower), since lunar directional strength peaks in the 4th and this Moon is in the 9th. *Vimsopaka bala* across the sixteen *vargas* is 7.00/20, third-lowest in the chart (after Jupiter 5.94 and Mercury 6.62). It carries 5 *bindus* in Makara in its own *Bhinnashtakavarga*, which Parashara reckons supportive. Verdict: dignified and

well-placed, but a Moon that sustains rather than drives.

> **(a) The Lagna is** 1°44′54” **from Mithuna**, at Vrishabha 28°15′05.7”, with Gemini rising at 08:32:28 IST – some seven and a half minutes after the recorded 08:25. If that time is rounded, the whole-sign grid shifts one sign: the Moon becomes an 8th-house Moon, Saturn loses Yogakaraka status entirely (ruling the 8th and 9th instead), and Mercury becomes Lagna lord. Planetary positions are robust; the *house* readings are not.
> **(b) The two house systems in the data disagree even at 08:25.** Whole-sign (Parashari) puts the Moon in the 9th. The Placidus cusps give H8 at Dhanu 24°00′42.8” and H9 at Makara 20°43′23.4”, placing a Moon at Makara 0°13′ in the *8th bhava*. The same shift moves Sun and Mercury from the 12th *rashi*-house into the 11th *bhava*, and Mars, Jupiter and Rahu from the 4th into the 3rd. This report follows whole-sign, the Parashari default, but the *bhava-chalita* reading is materially more favourable and a competent reader should hold both.

2.1.2 Lagna Rashi: Vrishabha

Ascendant	Vrishabha (Taurus) 28°15′05.7”, sidereal longitude 58.2516°
Lagna lord	Venus in Mithuna 3°04′23.8” – friend’s sign, 2nd house, 6 *bindus*
Element	Earth, *sthira* (fixed), Venus-ruled

Taurus rising gives a temperament built for duration: steady, sensory, resistant to being hurried, hard to move once a position is taken. With earth on the Ascendant, earth holding the Moon, and Earth as the birth star’s *tattva*, the chart weighs heavily toward form, craft and material consequence rather than abstraction.

The position in the *last* degrees matters. An “old” Lagna – 28°15′ of 30°, with 1°45′ of Taurus left – is classically associated with maturity rather than freshness of the sign’s qualities: the Venusian traits arrive already seasoned, and results tend to come late rather than early. *Mansagari* and the *Jataka* commentators read terminal-degree Ascendants as indicating a life whose characteristic yield belongs to its second half, consistent with a retrograde Yogakaraka.

Evidence for the Lagna lord is good: Venus clears 445.7 virupas against a 330 requirement (135%), carries the chart’s highest own-sign *bindu* count (6 in Mithuna), scores 9.56/20 *Vimsopaka bala*, and occupies the strongest *Sarvashtakavarga* sign (Mithuna, 38 *bindus*). The chart flags this as a classical *dhana* signature – Lagna lord in the 2nd. Under Placidus, however, Venus falls in the 1st *bhava*, reading as self-possession rather than acquisition.

2.1.3 Surya Rashi: exalted Sun in the twelfth

Sun	Mesha (Aries) 22°09′13.4” – **EXALTED**; 12th house (whole-sign); lord of the 4th
Mercury	Mesha 13°43′53.8” – **COMBUST**, 8.422° from the Sun; lord of the 2nd and 5th

This is the chart’s sharpest contradiction and should not be smoothed over: highest dignity, weakest house. The Sun is second only to Jupiter in absolute Shadbala (519.4 virupas, 133% of requirement, with full *naisargika bala* of 60.0) while sitting in the 12th. A 12th-house Sun classically indicates vitality and authority expended on something other than visible position – withdrawal, enclosed or foreign settings, research, service, the inner life. Since the Sun also rules the 4th (home, mother, emotional foundation), the 4th lord stands in the house of loss, read as dislocation of the domestic base, or a foundation located somewhere other than where it began.

The authorities split. *Phaladeepika* is the more fatalistic on 12th-house placements; *Saravali* allows exaltation to substantially redeem an inauspicious house; B.V. Raman treats an exalted 12th-house Sun as accomplishment that is real but under-credited. The reading offered here: capacity structurally

mismatched with its visible setting – high competence without proportionate acknowledgement – and a *moksha*-ward rather than status-ward use of solar energy. Caveat (b) is especially live, since an 11th-*bhava* exalted Sun would read as gains through networks, nearly the opposite. *Budha-Aditya Yoga* is formed and is classically a yoga of intelligence and articulation, but Mercury is combust at 8.422°, leaving the 2nd and 5th lord compromised in the 12th. Report the yoga; do not over-claim it.

2.1.4 Janma Nakshatra: Uttara Ashadha pada 2

Attribute	Value
Nakshatra	Uttara Ashadha, *pada* 2 (26.68% elapsed)
Lord	Sun (*Vimshottari* dispositor)
Deity	*Vishvadevas* – the Universal Gods
Symbol	Elephant tusk; planks of a bed
Span	Sagittarius 26°40′ to Capricorn 10°00′
Gana	*Manushya* (human); *rajas*-predominant
Yoni	*Nakula* – mongoose, female
Nadi	*Antya* (Kapha)
Vashya	*Chatushpada* (quadruped; Capricorn first half)
Rajju	*Nabhi* (navel)
Tattva	Earth (Capricorn portion)
Direction	South
Dosha	Kapha

Uttara Ashadha is the "latter unconquered" – associated with victory that is permanent because it was not won in a burst. Purva Ashadha wins; Uttara Ashadha wins and holds the ground. The elephant-tusk symbol states the archetype exactly: accumulated patient force, weight brought to bear slowly, a tool that is also a structure; planks of a bed carry the same load-bearing note. The classical significations are sustained effort, late but durable recognition, reliability under long obligation, and immovability once committed.

The deity set is diagnostic. The *Vishvadevas* are a *collective* of gods rather than one presiding figure, indicating work that is institutional and co-operative rather than solitary or charismatic – achievement inside structures, not as individual signature. *Manushya gana* reinforces the human-scale register; *Nabhi rajju* is reckoned the steadiest of the five.

Pada 2 spans Capricorn 0°00′ to 3°20′ and falls in the **Capricorn *navamsa*** – Saturnine, work-ordered, *pada* lord and sign lord identical. This is not a separate fact from the *vargottama* status; it *is* that fact seen from the *nakshatra* side, and Saturn is accordingly triple-counted: sign lord, *navamsa* lord, Yogakaraka. The star lord, though, is the Sun, so the mind's dispositor chain runs Moon → Sun (star) and Moon → Saturn (sign) – and that Sun is the exalted-but-twelfth planet above.

> **The *pada*-2 boundary.** The Moon sits only 13′27.5" inside Capricorn. At its computed speed of 13.2888°/day (0.5537°/hour) it crossed from *pada* 1 into *pada* 2 about 24 minutes before birth, consistent with an 08:00 IST entry.
>
> - The **nakshatra is robust.** Uttara Ashadha begins at Sagittarius 26°40′, 3°33′27" behind the Moon (about 6.4 hours of earlier birth) and ends at Capricorn 10°00′, 9°46′32" ahead (about 17.7 hours later). The *Vimshottari* dasha *lord* (Sun) is secure against any plausible error.
> - The ***pada* is not.** Birth earlier by more than roughly 25 minutes puts the Moon in *pada* 1, the Sagittarius *navamsa*. The Moon would then *not* be *vargottama*, the *Kemadruma* cancellation would lose one of its two supports, and the D9 Moon would change sign.

- The **dasha balance** is sensitive but the arithmetic is mild. 26.682% of the Sun's 6-year period is elapsed, leaving 4.39906 years (1606.7 days). The Moon covers 2.21′ per 4 minutes of clock error – 0.277% of the 13°20′ *nakshatra*, or about **6 days of dasha balance per 4 minutes**, roughly 1.5 days per minute.

2.1.5 Lagna Nakshatra: Mrigashira pada 2

Ascendant star	Mrigashira *pada* 2, Taurus 26°40′ to 30°00′		
Lord	Mars	**Deity** Soma / Chandra	**Symbol** deer's head
Gana	*Deva*	***Yoni*** Serpent (female)	

Mrigashira is the searching star – the deer's head turned, scenting, never quite settled. Its archetype is the seeker: curiosity as a permanent condition, a mind that tests and moves on, restlessness that is exploratory rather than anxious. Mars as star lord gives the search its edge; Soma as deity gives it refinement. *Pada* 2 falls in the **Virgo *navamsa***, confirmed independently by the D9 Ascendant (*Swamsa*) being Kanya, so the seeking is analytical rather than merely wandering. Note the register clash: the Ascendant's star is Mars-ruled, seeking, *Deva gana*; the Moon's star is Sun-ruled, consolidating, *Manushya gana*. Presentation searches; instinct settles.

2.1.6 The Yoni Conflict

The Moon-*nakshatra yoni* is *Nakula* (mongoose, female); the Lagna-*nakshatra yoni* is *Sarpa* (serpent, female). Mongoose and serpent are the canonical enemy pair of the *yoni koota* – the one antagonism on which the compatibility literature agrees. Both poles sitting inside a single chart should be read as a real structural polarity: an instinctive layer that is quick, defensive and pre-emptive (the mongoose does not wait to be struck) against a presentational layer that is still, coiled, patient and indirect – a genuine disjunction between *how the mind actually moves* and *how the self meets the world*. That both *yonis* are female lowers the friction somewhat in *koota* reckoning but does not dissolve the enmity. The *Dwandwa* section develops this and should be read with it.

2.1.7 Nakshatra Distribution of the Nine Grahas

Graha	Sidereal position	Nakshatra	Pada	Star lord	Tara
Sun	Mesha 22°09′13”	Bharani	3	Venus	Parama Mitra
Moon	Makara 0°13′28”	Uttara Ashadha	2	Sun	Janma
Mars	Simha 6°59′22”	Magha	3	Ketu	Mitra
Mercury	Mesha 13°43′54”	Bharani	1	Venus	Parama Mitra
Jupiter	Simha 6°48′25”	Magha	3	Ketu	Mitra
Venus	Mithuna 3°04′24”	Mrigashira	3	Mars	Vipat
Saturn	Simha 26°50′36”	Uttara Phalguni	1	Sun	Janma
Rahu	Simha 1°38′14” (mean)	Magha	1	Ketu	Mitra
Ketu	Kumbha 1°38′14” (mean)	Dhanishta	3	Mars	Vipat
Ascendant	Vrishabha 28°15′06”	Mrigashira	2	Mars	Vipat

Tara ordinals counted from the *janma nakshatra*: Janma 1, Vipat 3, Mitra 8, Parama Mitra 9.

The distribution is remarkably concentrated: all nine bodies fall under only **four** star lords. Ketu holds three (Mars, Jupiter, Rahu, all in Magha), Venus two (Sun and Mercury, both in Bharani), the Sun two (Moon in Uttara Ashadha, Saturn in Uttara Phalguni), Mars two (Venus in Mrigashira, Ketu

in Dhanishta). Five of the nine *Vimshottari* lords – Moon, Mercury, Jupiter, Saturn, Rahu – disposit *no* occupied *nakshatra* at all. Consequences for the dasha sequence:

- Venus in Mrigashira shares the Ascendant's star (different *pada*: Venus 3, Lagna 2). The Lagna lord in the Lagna's own star is a tight self-reinforcing link, and it placed Venus and Ketu under the **Mars Mahadasha, 1994-09-29 to 2001-09-29**.
- The **Rahu Mahadasha, 2001-09-29 to 2019-09-29** – eighteen years, the longest block run so far, and third-longest in the 120-year cycle after Venus (20) and Saturn (19) – activated *no* graha by star-dispositorship, Rahu ruling Ardra, Swati and Shatabhisha, none tenanted. Rahu is nonetheless the *Atmakaraka* at 28.3628° in Simha, so that period rested on Rahu's own placement with Mars, Jupiter and retrograde Saturn.
- The current **Jupiter Mahadasha (2019-09-29 to 2035-09-29)** with **Ketu Antardasha (2026-09-04 to 2027-08-11)** forms a dispositor loop: Jupiter itself sits in Magha, Ketu's own *nakshatra*, at an orb of only 0.183° (11.0 arc-minutes) from Mars. The *antardasha* lord disposits the *mahadasha* lord.
- The Sun-ruled stars carrying Moon and Saturn mean the **Sun Mahadasha of the first 4.3991 years** ran the mind and the Yogakaraka together. The next Sun period in this cycle is Jupiter/Sun, 2030-04-11 to 2031-01-28.

2.1.8 Tara Bala and Ashtakavarga Sign Strengths

Tara bala is computed by counting *nakshatras* forward from the *janma nakshatra* Uttara Ashadha (#21) and reducing modulo nine, as tabulated above. Sun and Mercury fall in *Parama Mitra*, the 9th and most supportive *tara* – a notable counterweight, since the *tara* count favours exactly the two planets the house framework penalises. Mars, Jupiter and Rahu fall in *Mitra* (8th), also favourable. Saturn falls in *Janma tara* (1st), read as mixed – powerful but personally costly, fitting a Yogakaraka that is retrograde, in an enemy sign, with *kala bala* of only 67.2 out of 300 and a single *bindu* in its own *Ashtakavarga*. Venus and Ketu fall in *Vipat* (3rd), the adverse *tara*, as does the Ascendant's own star – a real qualification on an otherwise excellent Venus.

The *Sarvashtakavarga* distributes 337 *bindus* across twelve signs, a mean of 28.1:

Rank	Sign	Bindus	House from Taurus
Strongest	Mithuna	38	2nd – wealth, speech, family, sustenance
	Kumbha	36	10th – career, *karma*, public standing
	Meena	32	11th – gains, networks
	Vrischika	29	7th – partnership
Weakest	Karka	22	3rd – siblings, initiative, effort
	Dhanu	23	8th – longevity, transformation, the hidden
	Kanya	24	5th – children, *purva punya*, intelligence
	Mesha	25	12th – loss, expenditure, *moksha*

Support concentrates in the **2nd (38) and 10th (36)** and thins in the **3rd (22) and 8th (23)**. Two cross-references make this more than a table. Mithuna, the strongest sign, holds the Lagna lord Venus with 6 of its own *bindus* – two independent measures agreeing. And the 10th at 36 *bindus* is the Yogakaraka's own sign Kumbha, where the MC also falls, at Kumbha 20°38′31" in Purva Bhadrapada *pada* 1: the vocational axis is well supplied even though Saturn itself is impeded. Against over-reading: the Moon lords Karka, the weakest sign at 22 *bindus*, so the mind's own lordship is the thinnest house; and Jupiter, strongest planet by absolute Shadbala at 545.9 virupas, lords Dhanu at 23 *bindus*, second weakest. Strong planets lording weak signs recurs throughout, arguing for a chart capable but unevenly supported rather than simply fortunate.

> The layer resolves into one structure. A *vargottama* Moon at the first degree of Saturn's Makara, in Sun-ruled Uttara Ashadha *pada* 2, in the 9th: a mind built for long accumulation, institutionally rather than individually oriented (*Vishvadevas*, elephant tusk), duty and vocation fused by Saturn's triple role as sign lord, *navamsa* lord and sole Yogakaraka – softened by residual Jupiterian idealism from the sign just vacated. Over it, a terminal-degree Taurus Lagna in Mrigashira, the searching star: a presentation that explores where the instinct consolidates. The two live sensitivities are a Lagna 1°45′ from Gemini and a *pada* boundary 24 minutes behind the recorded time. The *nakshatra* and the dasha lord survive both; the house grid and the *vargottama* status do not.

CHAPTER 3

Major Dashas: Vimshottari Mahadasha

3.1 Vimshottari Mahadasha: Periods and Readings

3.1.1 Method and computation

Vimshottari is the *dasha* system of choice here because its single input is unambiguous in this chart: the Moon's sidereal longitude read against the 27 *nakshatra* divisions. The Moon stands at **270.224312° – Makara (Capricorn) 00°13'27.5"** – inside *Uttara Ashadha*, *nakshatra* #21, lord the Sun. The *nakshatra* spans Sagittarius 26°40' to Capricorn 10°00', so the Moon has traversed 3.5576° of its 13°20' span: **26.682338% elapsed**.

Dasha at birth	Sun, with 73.317662% of a 6-year period unspent
Balance	6 years times 0.73317662 = **4.399060 years = 1606.7 days**
Year convention	365.2425 days per year
Cycle	120 years; Sun 6, Moon 10, Mars 7, Rahu 18, Jupiter 16, Saturn 19, Mercury 17, Ketu 7, Venus 20

> **Year convention.** This report uses the 365.2425-day year. Much practice instead uses the 360-day *savana* year, and the two diverge by 5.2425 days per elapsed *dasha* year. At the Saturn boundary (55.3991 years after birth) the *savana* reckoning falls roughly **290 days earlier**; by the Venus *Mahadasha* at age 98.4 the gap exceeds **515 days**. No classical text settles this – it is a convention, not a result – so check which year length was used before comparing any date here with another astrologer's.

> **Two birth-data sensitivities bear on this section.**
> *(a) The lord is robust; the balance is not.* The Moon is only **13.46 arc-minutes** into *Uttara Ashadha pada* 2, which it entered near 08:00 IST, some 24 minutes before the recorded birth. That the *janma nakshatra* is *Uttara Ashadha* and the first *Mahadasha* the Sun's is not in realistic doubt. But the Sun's 6 years map onto 800 arc-minutes of lunar longitude, so one arc-minute equals 2.739 days of balance; at the Moon's speed of **13.2888° per day** that is about **1.5 days per minute of birth-time error**, and across the 7.5-minute window below every boundary date shifts by roughly **11 days**. Treat all dates as carrying about two weeks of tolerance.
> *(b) The house framework is 7.5 minutes from changing.* The Lagna is Vrishabha **28°15'05.7"**, only 1°44'54" from Mithuna (Gemini), which begins rising near 08:32:28 IST. If 08:25 is rounded, the scheme shifts one sign: Mercury becomes Lagna lord ruling 1 and 4; **Saturn would rule 8 and 9 instead of 9 and 10 and cease to be *Yogakaraka***; **Jupiter would rule 7 and 10 instead of 8 and 11**; the four-planet Leo cluster would fall in the 3rd and the Moon in the 8th. Dates depend only on the Moon and are unaffected, but every house-based judgement below is conditional on the 08:25 Lagna.

3.1.2 The complete Mahadasha sequence

Lord	From	To	Years	Age span
Sun	1980-05-06	1984-09-29	4.3991	0.0 – 4.4
Moon	1984-09-29	1994-09-29	10.0000	4.4 – 14.4
Mars	1994-09-29	2001-09-29	7.0000	14.4 – 21.4
Rahu	2001-09-29	2019-09-29	18.0000	21.4 – 39.4

Lord	From	To	Years	Age span
Jupiter	**2019-09-29**	**2035-09-29**	**16.0000**	**39.4 – 55.4 (current)**
Saturn	2035-09-29	2054-09-29	19.0000	55.4 – 74.4
Mercury	2054-09-29	2071-09-29	17.0000	74.4 – 91.4
Ketu	2071-09-29	2078-09-28	7.0000	91.4 – 98.4
Venus	2078-09-28	2098-09-28	20.0000	98.4 – 118.4
Sun	2098-09-28	2104-09-29	6.0000	118.4 – 124.4
Moon	2104-09-29	2114-09-29	10.0000	124.4 – 134.4
Mars	2114-09-29	2121-09-29	7.0000	134.4 – 141.4

The rows past the Venus period exist because the cycle is arithmetic and repeats. **Nothing about longevity can be inferred from the table's extent**; *Vimshottari* assigns 120 years to every chart ever cast.

3.1.3 Sun Mahadasha, 1980–1984 (ages 0.0–4.4)

The Sun is **exalted (*uccha*) in Mesha at 22°09'13.4**", in the **12th house**, **ruling the 4th**, in *Bharani pada* 3 (Venus-ruled). Shadbala **519.4 virupas = 8.66 *rupas* = 133% of its 390 requirement**, second strongest absolutely, with *naisargika bala* at the full 60.0 but *drik bala* only 0.4. It holds **5 bindus** in Mesha, whose *sarvashtakavarga* total of **25** is among the chart's four weakest. Conjunct Mercury at an 8.422° orb, giving *Budha-Aditya Yoga* – though Mercury is combust. The Sun is *Bhratrikaraka*.

Houses activated: the 12th occupied, the 4th ruled, the 6th (Tula, 26 bindus) aspected. An exalted 4th lord in the 12th is a classically mixed signature – a strong significator lodged in the house of dissolution and distance. Covering only the first 4.4 years, the period signifies the environment the chart arrives into rather than any agency of the native's: the 4th-house field of home and mother, read through a 12th-house lens. Sub-periods ran Rahu 0.4491 years, Jupiter 0.80, Saturn 0.95, Mercury 0.85, Ketu 0.35, Venus 1.00.

3.1.4 Moon Mahadasha, 1984–1994 (ages 4.4–14.4)

The Moon is in **Makara at 00°13'27.5**", a neutral sign, in the **9th house**, **ruling the 3rd**, and is the chart's **only *vargottama* body** (Makara in both D1 and D9). Shadbala **406.5 virupas = 6.77 *rupas* = 113% of its 360 requirement**; *dig bala* only 16.8, second lowest in the chart. **5 bindus** in Makara (total 27). *Uttara Ashadha pada* 2, lord Sun – hence the Sun period came first. It is *Darakaraka*.

Kemadruma Yoga is technically present, Kumbha and Dhanu (2nd and 12th from the Moon) both being empty, but the data records it **cancelled**: Sun and Mercury occupy a *kendra* from the Moon (the 4th, Mesha) and the Moon is *vargottama*. *Chandra-Adhi Yoga* is partial – Jupiter 8th and Venus 6th from the Moon, no third benefic. Houses activated: the 9th occupied (*dharma*, teachers, father, long journeys), the 3rd ruled and also aspected – Karka, at **22 bindus the weakest sign in the chart**.

Parashara treats a *vargottama* Moon as a major stabiliser; *Saravali* reads a Capricorn Moon as reserved and slow to warm. The low *dig bala* in the 9th signifies sensitivity in matters of belief and authority rather than weak feeling. As a schooling decade the period signifies absorbing a framework rather than acting on one.

3.1.5 Mars Mahadasha, 1994–2001 (ages 14.4–21.4)

Mars is in **Simha at 06°59'22.4**", a friend's sign, in the **4th house**, **ruling the 7th and 12th**, in *Magha pada* 3 (lord Ketu). It is *Pitrikaraka*. Shadbala **370.8 virupas = 6.18 *rupas***, 124% of its modest 300 requirement but the **lowest absolute total in the chart**; its ***dig bala* of 4.6 is the weakest *dig***

***bala* in the chart**, Mars gaining directional strength in the 10th and losing it in the 4th. **4 bindus** in Simha (total 27).

Conjunctions dominate: Jupiter at **0.183° (11.0 arc-minutes)**, Rahu at 5.352°, Saturn at 19.854°. These give *Guru-Mangala Yoga* (exceptionally tight), *Angaraka Yoga* with Rahu, and a *Raja Yoga* by conjunction – Mars as *kendra* lord (7, 12) joined to Saturn as *trikona* lord (9, 10). Houses activated: the 4th occupied; the 7th and 12th ruled; and by Mars's three aspects the 7th (Vrischika, 29 – its own sign), the 10th (Kumbha, 36) and the 11th (Meena, 32).

Kuja (Mangal) Dosha is flagged twice – Mars in the 4th from Lagna, and Mars 8th from the Moon – and here the authorities diverge and should not be harmonised. *Mansagari* is severe on it. Against that, the data records three standard mitigations: the Jupiter conjunction at an 11 arc-minute orb is a classical cancellation; several authorities exempt Mars in Leo, the Sun's sign; and Mars does not afflict the 7th lord, which is Mars itself. B.V. Raman treated mechanical *Kuja-dosha* reading as largely superstition. The configuration exists, its cancellations are well attested, and the texts do not agree on the residue. For ages 14 to 21 the period signifies energy seeking an outlet through the 4th-house field of home ground and education, with force available but poorly aimed.

3.1.6 Rahu Mahadasha, 2001–2019 (ages 21.4–39.4)

Eighteen years, and structurally the most loaded stretch of the first half of life. Rahu (true) stands at **Simha 01°50'32.3"** (mean 01°38'13.9") in the **4th house**, *Magha pada* 1, lord Ketu, ruling nothing. Decisively it is the ***Atmakaraka***, highest in degree of all at **28.3628°** of Simha on the reverse reckoning the nodes require; its *Karakamsa* is Mesha. In Jaimini's frame the *Atmakaraka* carries the chart's governing agenda, and in the 4th that agenda points at home, land, mother, early learning and inner life.

Rahu sits with every other Leo occupant: Jupiter at 5.170° (*Guru-Chandala Yoga*), Mars at 5.352° (*Angaraka Yoga*), retrograde Saturn at 25.206°. Its dispositor is the exalted Sun at 519.4 virupas, which classical practice reads as materially improving a Rahu period, a node delivering through its sign lord. *Kala Sarpa Yoga* is *absent*: planets lie on both sides of the nodal axis. On aspects the texts disagree and the disagreement should be stated – Parashara's main-line *drishti* rules give the nodes no aspect at all, while later and much modern practice grants Rahu 5th, 7th and 9th *drishti* after the manner of Jupiter, on which convention the 10th (Kumbha, 36 bindus, tenanted by Ketu), 8th and 12th are touched.

The eighteen years were internally uneven: Rahu 2.70, Jupiter 2.40, Saturn 2.85, Mercury 2.55, Ketu 1.05, **Venus 3.00 (2013-04-17 to 2016-04-17, the longest sub-period, Venus being Lagna lord in the 2nd at 135% Shadbala)**, Sun 0.90, Moon 1.50, Mars 1.05. An *Atmakaraka* Rahu period in the 4th signifies a long stretch in which the question of where and what one belongs to is actively worked rather than settled.

3.1.7 Jupiter Mahadasha, 2019–2035 (ages 39.4–55.4): the current period

3.1.7.1 Jupiter's condition

Jupiter is in **Simha at 06°48'25.2"**, a friend's sign, in the **4th house**, **ruling the 8th and 11th**, in *Magha pada* 3 (lord Ketu). It is *Putrakaraka*. By Shadbala it is **the strongest planet in the chart on both measures**: **545.9 virupas = 9.10 *rupas* = 140% of its 390 requirement**, from *sthana* 218.1, *dig* 37.1, *kala* 182.2, *cheshta* a maximum **60.0**, *naisargika* 34.3, *drik* 14.1. The maximal *cheshta bala* follows from a daily motion of only **0.0296°** – Jupiter is effectively stationary at birth, on the turn.

Two counterweights belong in the same breath. Jupiter's *bhinnashtakavarga* total of **56** is the highest of the seven, yet it holds only **4 bindus in Simha**, the sign it occupies, whose *sarvashtakavarga* is a middling 27. And its ***Vimsopaka bala* is 5.94 of 20, the lowest of all seven planets**, because across the sixteen divisions Jupiter never reaches its own sign or exaltation – Leo in D1–D4, Virgo in D7,

Gemini in D9, Libra in D10 and D12. Immense Shadbala, thin divisional corroboration: classically a planet whose results are substantial but whose durability must be built rather than assumed.

3.1.7.2 Houses activated

The 4th is occupied – home, mother, land, vehicles, inner life, foundational education. The 8th and 11th are ruled: Dhanu at 23 bindus, the chart's second weakest sign, against Meena at 32, its third strongest. By aspect Jupiter reaches the 8th (5th *drishti*), the 10th (7th *drishti* – Kumbha, 36 bindus, Ketu there) and the 12th (9th *drishti* – Mesha, holding the exalted Sun and combust Mercury). An 11th lord in a *kendra* casting its 7th aspect on the 10th is a recognised accrual signature in Parashara's treatment of the 11th lord's *dasha*.

The dual rulership is where the texts split, materially. *Phaladeepika* and the mainstream commentaries hold that for a natural benefic a *trikasthana* rulership – here the 8th – is the more damaging assignment. A competing line holds that the 8th from Taurus makes Jupiter a significator of *sudden structural change* rather than of loss, the 11th rulership carrying actual delivery. The data records the tension flatly, labelling the 2nd and 11th lord positions – Mercury combust in the 12th, Jupiter in the 4th with Rahu and retrograde Saturn – as **mixed**.

3.1.7.3 The two colouring yogas

Guru-Chandala Yoga, Jupiter with Rahu at a **5.17°** orb, is the configuration most specific to this period. The standard reading – *Mansagari*, and in modern form B.V. Raman – is that Rahu's contact distorts the *guru* function: counsel taken from the wrong source, orthodoxy and heterodoxy confused, confidence outrunning its grounds. The counter-reading, widespread in the Parashara-derived tradition, is that where Jupiter substantially outweighs Rahu's capacity to overwhelm it – and 545.9 virupas at 140% is the chart's strongest figure – the conjunction amplifies unconventional knowledge rather than corrupting judgement. The two are genuinely irreconcilable and the chart data cannot adjudicate between them; what both share is that in this *Mahadasha* the question of *whose authority one accepts* becomes live. The period closes with **Jupiter/Rahu, 2033-05-05 to 2035-09-29**, the conjunction running as *Mahadasha* over *Antardasha* – classically the point where such a theme turns explicit.

Shakata Yoga is present because the Moon is **6th from Jupiter** (Jupiter in Simha, Moon in Makara), a 6/8/12 relation for which the texts give the cart-wheel image of fortunes rising and falling rather than accumulating. Two qualifications. Several authorities cancel *Shakata* when the Moon occupies a *kendra* from the Lagna; the Moon here is in the **9th**, so that cancellation is *not* available. But the Moon is *vargottama* in Makara with 5 bindus and 113% Shadbala, and B.V. Raman regarded *Shakata* as much over-stated. The defensible reading is not misfortune but *phase mismatch*: gains in the 11th-house domain and settlement in the 9th-house domain tend not to arrive together.

Guru-Mangala Yoga at an orb of **0.183° (11 arc-minutes)** is the tightest configuration in the chart. Classically it lends force to judgement – the capacity to act on a conclusion rather than merely hold it – its failure mode being haste dressed as principle. Mars supplies heat rather than stamina, given its 4.6 *dig bala* and lowest absolute Shadbala at 370.8. Note too that *Gaja-Kesari Yoga* is *absent*, Jupiter being 8th from the Moon rather than in 1/4/7/10, and *Hamsa Yoga* absent, Jupiter being neither in its own sign nor exalted.

3.1.7.4 Sub-periods, and where the clock now stands

Antardasha	From	Years	Age
Jupiter	2019-09-29	2.1333	39.4 – 41.5
Saturn	2021-11-16	2.5333	41.5 – 44.1
Mercury	2024-05-30	2.2667	44.1 – 46.3
Ketu	**2026-09-04**	**0.9333**	**46.3 – 47.3 (current)**

Antardasha	From	Years	Age
Venus	2027-08-11	2.6667	47.3 – 49.9
Sun	2030-04-11	0.8000	49.9 – 50.7
Moon	2031-01-28	1.3333	50.7 – 52.1
Mars	2032-05-29	0.9333	52.1 – 53.0
Rahu	2033-05-05	2.4000	53.0 – 55.4

As of 2026-11-03 the stack is **Jupiter / Ketu / Venus / Saturn**: Ketu *Antardasha* to 2027-08-11, Venus *Pratyantardasha* 2026-09-24 to 2026-11-20, Saturn *Sookshma* 2026-10-31 to 2026-11-09. Ketu occupies the **10th house** in Kumbha (36 bindus, the chart's second strongest sign), *Dhanishta pada* 3, lord Mars, with its dispositor Saturn exactly opposite in the 4th – so a Ketu sub-period necessarily runs along the 4th/10th axis. Ketu periods classically signify detachment and the loosening of an attachment, which in the 10th reads as reappraisal of the public role. The long **Jupiter/Venus** sub-period following (2027-08-11 to 2030-04-11, 2.6667 years) engages the chart's cleanest asset: Venus, Lagna lord in the 2nd in a friend's sign, **6 bindus** – the highest own-sign count present – 445.7 virupas at 135%, flagged in the data as a classical *dhana-yoga* signature.

3.1.7.5 How the period is best used

The leverage lies in the 4th house, because that is where the *dasha* lord sits and where its strength is. The 11th rulership suggests what accrues tends to arrive through networks rather than through position; the 8th rulership, that the route runs through restructuring rather than smooth accumulation; the 9th aspect onto the 12th, where the exalted Sun sits, that study, retreat and distance are productive rather than wasteful uses of the time. The low *Vimsopaka* figure argues for consolidating gains into durable form rather than trusting their momentum. A well-used Jupiter period of this configuration is one spent building something that stays put.

3.1.8 Saturn Mahadasha, 2035–2054 (ages 55.4–74.4)

This is the chart's central paradox and, at nineteen years, its longest period.

Saturn is the **sole *Yogakaraka*** for Vrishabha Lagna, ruling **both the 9th and the 10th**, and sits in the 4th, a *kendra* – satisfying exactly Parashara's rule that a planet owning both a trine and an angle, and occupying an angle, constitutes an intrinsic *Raja Yoga*; it forms a second by conjunction with Mars. Its ***sthana bala* of 226.0 is the highest positional strength of any planet here**; *cheshta bala* is at the maximum **60.0**; *drik bala* 17.6 is the highest aspectual strength present; the total is **409.0 virupas = 6.82 *rupas* = 136% of its 300 requirement**, second highest by percentage. Its ***Vimsopaka bala* of 10.31 of 20 is the best in the chart** and the only figure rated good, Saturn reaching Vrishabha, Kumbha, Tula, Meena and Makara repeatedly across the divisions. It is *Amatyakaraka*. On paper, the most promising *dasha* here.

Against all of that: Saturn is in **Simha at 26°50'36.4" – an enemy's sign**; **retrograde** (daily motion minus 0.0278°); its ***kala bala* is only 67.2, the lowest temporal strength in the chart by a wide margin** (Mars next at 101.1, Mercury reaching 204.8); *naisargika bala* 8.6, the lowest by nature; and it holds **1 bindu** in its own *bhinnashtakavarga* in Simha – the lowest own-sign figure in the chart, against Venus's 6 – with a total of 39, tied lowest with Mars. *Uttara Phalguni pada* 1, lord Sun: the same Sun in whose enemy sign it stands. The data's own verdict is blunt – *yoga present, delivery impeded*.

Houses activated: the 4th occupied; the 9th and 10th ruled – Makara at 27 bindus, where the *vargottama* Moon sits, and Kumbha at 36, the second strongest sign, where Ketu sits. By Saturn's three aspects: the 6th (3rd *drishti*, Tula, 26), the 10th (7th *drishti*, Kumbha, 36) and the **1st** – Saturn's special 10th aspect falls on the Lagna itself, Vrishabha at 28 bindus.

> **Retrogression is where the classical texts refuse to agree**, and that disagreement is the whole interpretive question for this period. One school holds a retrograde planet delivers its significations with unusual force – the *cheshta bala* of 60.0 encodes exactly that view, the Shadbala scheme rewarding retrogression. A second holds results come out of sequence, late, or by revisiting rather than advancing. A third holds retrogression in an inimical sign largely nullifies the significations. *Brihat Jataka* and *Saravali* can each be read in support of more than one. None is settled, and the single bindu in Simha belongs in the record as the chart's most cautionary number without being dressed as a verdict: Ashtakavarga bindus measure a sign's capacity to deliver, not a sentence passed on a life.

One point is routinely confused: Saturn is **8th from the Moon** at birth, not in the 12th, 1st or 2nd from it, so the natal configuration is *not* a *Sade Sati* one. *Sade Sati* is a transit phenomenon with no bearing on the *dasha* sequence.

Constructively: nineteen years under the lord of the 9th and 10th is the chart's institution-building window, and it falls at ages 55 to 74 – classically when 9th and 10th house matters, *dharma* and public role, are expected to mature. The impediments all point one way: the slow route rather than the fast, incremental authority, formal structure, long commitments honoured over time. The chart's lowest *kala bala* is a statement about *timing*, not capacity.

3.1.9 Mercury Mahadasha, 2054–2071 (ages 74.4–91.4)

Mercury is in **Mesha at 13°43'53.8"**, a neutral sign, in the **12th house**, **combust** at 8.42° from the Sun, **ruling the 2nd and 5th**, in *Bharani pada* 1 (lord Venus). It is *Matrikaraka*. Shadbala **470.0 virupas = 7.83 *rupas***, third highest absolutely, but only **112% of its 420 requirement – the lowest percentage in the chart**. The spread is striking: the **highest *kala bala* of all at 204.8** and **highest *dig bala* at 45.2**, against the lowest *cheshta* at 30.7 and *drik* 0.4. It holds 5 bindus in Mesha (total 25, among the weakest), with a *bhinnashtakavarga* total of 54.

Budha-Aditya Yoga forms with the exalted Sun, and the combustion is precisely the classical crux: Parashara-derived practice reads *Budha-Aditya* as a yoga of intelligence and articulate expression, while Varahamihira and the *astangata* (combustion) rule hold that a planet inside the Sun's glare loses capacity to deliver its own significations. *Bhadra Yoga* is independently absent. Houses activated: the 12th occupied, the 2nd (Mithuna, **38 bindus, the strongest sign in the chart**) and 5th (Kanya, 24) ruled, the 6th aspected. The lord of resources and of creativity in the house of retreat, expenditure, distance and *moksha*, at ages 74 to 91, signifies the turn inward.

3.1.10 Ketu Mahadasha, 2071–2078 (ages 91.4–98.4)

Ketu stands at **Kumbha 01°50'32.3"** (true; mean 01°38'13.9") in the **10th house**, *Dhanishta pada* 3, lord Mars, ruling nothing. Kumbha carries **36 bindus**, the chart's second strongest sign, and the *arudha* of the 10th falls in Vrischika. Ketu's dispositor Saturn sits directly opposite in the 4th, so this period too runs along the 4th/10th axis that dominates the chart. Ketu in the 10th is classically read as the dissolution of role – action performed without claim on its result – and in Jaimini's *Upadesa Sutras* Ketu's placement marks what is already complete rather than what is still sought.

3.1.11 Venus Mahadasha, 2078–2098 (ages 98.4–118.4)

Venus is in **Mithuna at 03°04'23.8"**, a friend's sign, in the **2nd house**, **ruling the 1st and 6th** – the **Lagna lord**. Shadbala **445.7 virupas = 7.43 *rupas* = 135% of its 330 requirement**, *cheshta bala* at the maximum 60.0 and *drik bala* minus 1.5, the only negative aspectual figure in the chart. It holds **6 bindus** in Mithuna, the highest own-sign count present, and Mithuna's *sarvashtakavarga* of **38** is the strongest of all twelve signs; *bhinnashtakavarga* total 52, *Vimsopaka* 9.56 of 20. It lies in *Mrigashira pada* 3, lord Mars – and since the Lagna falls in *Mrigashira pada* 2, the Lagna lord occupies the Lagna's own *nakshatra*. Venus is *Gnatikaraka*. The data flags a classical *dhana-yoga* signature:

Lagna lord in the house of wealth, in a friend's sign, in the chart's strongest sign by Ashtakavarga. Houses activated: the 2nd occupied, the 1st and 6th ruled, the 8th (Dhanu, 23) aspected. *Malavya Yoga* is absent, Venus being neither in its own sign nor exalted.

That the best-supported placement in the chart receives its *Mahadasha* only at age 98 is a feature of the *Vimshottari* ordering, not a judgement about the life. Nothing predictive should be read into a period at these ages.

> **The shape of the whole arc.** The chart front-loads the luminaries and Mars – Sun 4.4 years, Moon 10, Mars 7 – so the first **21.4 years** run entirely under the three most personal, quickest-moving significators. Then **18 years of Rahu**, the *Atmakaraka*, ages 21.4 to 39.4. Then, without a break, **35 consecutive years of Jupiter followed by Saturn**, 2019-09-29 to 2054-09-29, ages 39.4 to 74.4 – and Jupiter and Saturn are the two planets sitting *together in the 4th house* in Simha, 20.036° apart, alongside Mars and Rahu. Four of the nine *dasha* lords occupy that one house, and between them they hold the *Mahadasha* continuously from age 21.4 to 74.4 – **53 unbroken years** – with only the handovers at 39.4 and 55.4 marking changes of tone. The **4th house** – home, mother, land, vehicles, foundational education, inner life – is therefore the dominant theatre of middle and later life, most sharply of roughly ages 39 to 74. The chart's cleanest assets, Venus as Lagna lord in its strongest sign and the *vargottama* Moon in the 9th, are never *Mahadasha* lord during the productive decades at all; they work as sub-periods and background support. Read constructively, the arc says that whatever this life builds, it builds in one place.

CHAPTER 4

Minor Dashas: Antardasha and Pratyantardasha

4.1 Antardasha and Pratyantardasha: Periods and Readings

4.1.1 Method: how the subdivisions are computed

Vimshottari is a proportional system. The 120-year cycle is divided among nine lords in fixed shares – Sun 6, Moon 10, Mars 7, Rahu 18, Jupiter 16, Saturn 19, Mercury 17, Ketu 7, Venus 20 – and every level below repeats that same proportion inside its parent period. The *Antardasha* (or *bhukti*) of lord X inside the *Mahadasha* of lord M therefore runs

```
length(M/X) = MD_years(M) × share(X) / 120
```

and the sequence always begins with the *Mahadasha* lord's own *Antardasha*, then proceeds in the standard order from there. This ordering convention is Parashara's (*Brihat Parashara Hora Shastra*, *dasha* chapters) and is followed uniformly in modern Indian practice.

Worked example 1 – the current *Antardasha*. The Jupiter *Mahadasha* runs 16 years, 2019-09-29 to 2035-09-29 (age 39.4–55.4). Ketu's share of the cycle is 7/120, so $16 \times 7/120 = 0.933333$ years $= 340.9$ days. The computed tree records this *Antardasha* as `Ketu 2026-09-04 to 2027-08-11, 0.9333 years, age 46.3-47.3` – an exact match.

Worked example 2 – why the first table starts at Rahu. The *Vimshottari* balance at birth is Sun 4.399060 years, i.e. 1606.7 days, derived from the Moon's position 26.682338% of the way through Uttara Ashadha ($6 \times (1 - 0.26682338) = 4.39906$). So $6 - 4.39906 = 1.60094$ years of the Sun *Mahadasha* had already run before birth. Subdividing: Sun/Sun $= 6 \times 6/120 = 0.30$, Sun/Moon $= 0.50$, Sun/Mars $= 0.35$, cumulative 1.15 years; Sun/Rahu $= 6 \times 18/120 = 0.90$. Birth therefore falls $1.60094 - 1.15 = 0.45094$ years into the Sun/Rahu *bhukti*, leaving $0.90 - 0.45094 = 0.44906$ years – the `0.4491` in the table below. The three pre-natal *bhuktis* are correctly omitted.

***Pratyantardasha* and *Sookshma*.** The third level applies the same fraction again: `length(M/X/Y) = AD_years(X) × share(Y) / 120`. For the current period, Venus inside Jupiter/Ketu is $0.933333 \times 20/120 = 0.155556$ years $= 56.8$ days, matching the recorded `Venus 2026-09-24 to 2026-11-20, 56.8 days`. A fourth application gives the *Sookshma*: Saturn inside that *Pratyantardasha* is $56.8 \times 19/120 = 9.0$ days, matching `Saturn 2026-10-31 to 2026-11-09`.

> All dates in this section derive from one number only – the Moon's sidereal longitude 270.224312° – through the balance 4.399060 years. They are entirely independent of the Ascendant. The Lagna sensitivity discussed elsewhere in this report changes *which houses* the *dasha* lords occupy, and therefore the reading; it does not move a single date.

The chart data uses a *Vimshottari* year of 365.2425 days (the Gregorian mean year). Schools that use a 360-day *savana* year, or the 365.25-day Julian year, produce systematically different dates. The 360-day convention shortens the cycle by $120 \times 5.2425 \approx 629$ days; at 39.4 years elapsed, the Jupiter *Mahadasha* ingress would fall roughly $39.4 \times 5.2425 \approx 207$ days – about seven months – earlier than tabulated here. This is a convention disagreement, not a calculation error, and it is larger than the birth-time uncertainty. Every date below is on the 365.2425-day convention.

4.1.2 The interpretive rule set for minor periods

An *Antardasha* is not read as a period of its own lord. It is read as the *Mahadasha* lord's promise *filtered* through the *Antardasha* lord's condition. Four factors are weighed, in this order of priority:

1. **Mutual house distance**
   Counted from the *Mahadasha* lord's sign to the *Antardasha* lord's sign. A lord in the 6th, 8th or 12th from the *Mahadasha* lord is the classically difficult configuration – friction, displacement, hidden cost. Conjunction (same sign), or a mutual *kendra* (1/4/7/10), or a mutual *trikona* (1/5/9), is supportive. The 11th is specifically acquisitive.
2. **The *Antardasha* lord's own strength**
   Taken here from *Shadbala* as a percentage of requirement, the *Bhinnashtakavarga* bindus in its own occupied sign, and *Vimsopaka bala* out of 20 – these three often disagree, and where they do the period is mixed rather than simply strong or weak.
3. **Natural friendship and dispositorship**
   Whether the two lords are natural friends, and the condition of the sign-lord that disposits the *Antardasha* lord – decisive for the nodes, which own nothing.
4. **House rulership from Lagna**
   What the *Antardasha* lord governs, which supplies the subject matter.

Classical authorities differ on the weighting. *Phaladeepika* and *Saravali* emphasise the *Antardasha* lord's absolute condition from the Lagna; the Parashari *dasha* chapters stress the mutual relationship between the two lords; one later school erects the *Mahadasha* lord's sign as a temporary Ascendant and reads the *Antardasha* lord's house from there. These three methods can give materially different verdicts on the same period. This section uses the mutual-relationship method and states the distances explicitly, so a reader using another method can re-derive the reading. Note also that Varahamihira's *Brihat Jataka* does not teach *Vimshottari* at all – its longevity and period material is built differently – and Jaimini's *Upadesa Sutras* times events by *Chara dasha*, not by this system. The *karaka* scheme in this chart (Rahu as *Atmakaraka* at 28.3628°, Saturn as *Amatyakaraka* at 26.8434°) is therefore a cross-check on theme, never a timing authority inside *Vimshottari*.

4.1.3 Complete Antardasha tables, 1980 to 2098

4.1.3.1 Sun Mahadasha, 1980-05-06 to 1984-09-29 (6 years, balance 4.3991)

Antardasha	From	To	Years	Age span
Rahu	1980-05-06	1980-10-17	0.4491	0.0–0.4
Jupiter	1980-10-17	1981-08-05	0.8000	0.4–1.2
Saturn	1981-08-05	1982-07-18	0.9500	1.2–2.2
Mercury	1982-07-18	1983-05-24	0.8500	2.2–3.0
Ketu	1983-05-24	1983-09-29	0.3500	3.0–3.4
Venus	1983-09-29	1984-09-29	1.0000	3.4–4.4

4.1.3.2 Moon Mahadasha, 1984-09-29 to 1994-09-29 (10 years)

Antardasha	From	To	Years	Age span
Moon	1984-09-29	1985-07-30	0.8333	4.4–5.2
Mars	1985-07-30	1986-02-28	0.5833	5.2–5.8
Rahu	1986-02-28	1987-08-30	1.5000	5.8–7.3
Jupiter	1987-08-30	1988-12-29	1.3333	7.3–8.6
Saturn	1988-12-29	1990-07-30	1.5833	8.6–10.2
Mercury	1990-07-30	1991-12-30	1.4167	10.2–11.6
Ketu	1991-12-30	1992-07-30	0.5833	11.6–12.2
Venus	1992-07-30	1994-03-30	1.6667	12.2–13.9
Sun	1994-03-30	1994-09-29	0.5000	13.9–14.4

4.1.3.3 Mars Mahadasha, 1994-09-29 to 2001-09-29 (7 years)

Antardasha	From	To	Years	Age span
Mars	1994-09-29	1995-02-25	0.4083	14.4–14.8
Rahu	1995-02-25	1996-03-15	1.0500	14.8–15.9
Jupiter	1996-03-15	1997-02-19	0.9333	15.9–16.8
Saturn	1997-02-19	1998-03-30	1.1083	16.8–17.9
Mercury	1998-03-30	1999-03-28	0.9917	17.9–18.9
Ketu	1999-03-28	1999-08-24	0.4083	18.9–19.3
Venus	1999-08-24	2000-10-23	1.1667	19.3–20.5
Sun	2000-10-23	2001-02-28	0.3500	20.5–20.8
Moon	2001-02-28	2001-09-29	0.5833	20.8–21.4

4.1.3.4 Rahu Mahadasha, 2001-09-29 to 2019-09-29 (18 years)

Antardasha	From	To	Years	Age span
Rahu	2001-09-29	2004-06-11	2.7000	21.4–24.1
Jupiter	2004-06-11	2006-11-04	2.4000	24.1–26.5
Saturn	2006-11-04	2009-09-10	2.8500	26.5–29.3
Mercury	2009-09-10	2012-03-30	2.5500	29.3–31.9
Ketu	2012-03-30	2013-04-17	1.0500	31.9–32.9
Venus	2013-04-17	2016-04-17	3.0000	32.9–35.9
Sun	2016-04-17	2017-03-12	0.9000	35.9–36.8
Moon	2017-03-12	2018-09-11	1.5000	36.8–38.3
Mars	2018-09-11	2019-09-29	1.0500	38.3–39.4

4.1.3.5 Jupiter Mahadasha, 2019-09-29 to 2035-09-29 (16 years) – CURRENT

Antardasha	From	To	Years	Age span
Jupiter	2019-09-29	2021-11-16	2.1333	39.4–41.5
Saturn	2021-11-16	2024-05-30	2.5333	41.5–44.1

Antardasha	From	To	Years	Age span
Mercury	2024-05-30	2026-09-04	2.2667	44.1–46.3
Ketu	2026-09-04	2027-08-11	0.9333	46.3–47.3
Venus	2027-08-11	2030-04-11	2.6667	47.3–49.9
Sun	2030-04-11	2031-01-28	0.8000	49.9–50.7
Moon	2031-01-28	2032-05-29	1.3333	50.7–52.1
Mars	2032-05-29	2033-05-05	0.9333	52.1–53.0
Rahu	2033-05-05	2035-09-29	2.4000	53.0–55.4

4.1.3.6 Saturn Mahadasha, 2035-09-29 to 2054-09-29 (19 years)

Antardasha	From	To	Years	Age span
Saturn	2035-09-29	2038-10-02	3.0083	55.4–58.4
Mercury	2038-10-02	2041-06-11	2.6917	58.4–61.1
Ketu	2041-06-11	2042-07-21	1.1083	61.1–62.2
Venus	2042-07-21	2045-09-19	3.1667	62.2–65.4
Sun	2045-09-19	2046-09-01	0.9500	65.4–66.3
Moon	2046-09-01	2048-04-02	1.5833	66.3–67.9
Mars	2048-04-02	2049-05-11	1.1083	67.9–69.0
Rahu	2049-05-11	2052-03-17	2.8500	69.0–71.9
Jupiter	2052-03-17	2054-09-29	2.5333	71.9–74.4

4.1.3.7 Mercury Mahadasha, 2054-09-29 to 2071-09-29 (17 years)

Antardasha	From	To	Years	Age span
Mercury	2054-09-29	2057-02-24	2.4083	74.4–76.8
Ketu	2057-02-24	2058-02-21	0.9917	76.8–77.8
Venus	2058-02-21	2060-12-22	2.8333	77.8–80.6
Sun	2060-12-22	2061-10-29	0.8500	80.6–81.5
Moon	2061-10-29	2063-03-30	1.4167	81.5–82.9
Mars	2063-03-30	2064-03-26	0.9917	82.9–83.9
Rahu	2064-03-26	2066-10-14	2.5500	83.9–86.4
Jupiter	2066-10-14	2069-01-19	2.2667	86.4–88.7
Saturn	2069-01-19	2071-09-29	2.6917	88.7–91.4

4.1.3.8 Ketu Mahadasha, 2071-09-29 to 2078-09-28 (7 years)

Antardasha	From	To	Years	Age span
Ketu	2071-09-29	2072-02-25	0.4083	91.4–91.8
Venus	2072-02-25	2073-04-26	1.1667	91.8–93.0
Sun	2073-04-26	2073-09-01	0.3500	93.0–93.3
Moon	2073-09-01	2074-04-02	0.5833	93.3–93.9
Mars	2074-04-02	2074-08-29	0.4083	93.9–94.3

Antardasha	From	To	Years	Age span
Rahu	2074-08-29	2075-09-16	1.0500	94.3–95.4
Jupiter	2075-09-16	2076-08-22	0.9333	95.4–96.3
Saturn	2076-08-22	2077-10-01	1.1083	96.3–97.4
Mercury	2077-10-01	2078-09-28	0.9917	97.4–98.4

4.1.3.9 Venus Mahadasha, 2078-09-28 to 2098-09-28 (20 years)

Antardasha	From	To	Years	Age span
Venus	2078-09-28	2082-01-28	3.3333	98.4–101.7
Sun	2082-01-28	2083-01-28	1.0000	101.7–102.7
Moon	2083-01-28	2084-09-28	1.6667	102.7–104.4
Mars	2084-09-28	2085-11-28	1.1667	104.4–105.6
Rahu	2085-11-28	2088-11-28	3.0000	105.6–108.6
Jupiter	2088-11-28	2091-07-30	2.6667	108.6–111.2
Saturn	2091-07-30	2094-09-28	3.1667	111.2–114.4
Mercury	2094-09-28	2097-07-29	2.8333	114.4–117.2
Ketu	2097-07-29	2098-09-28	1.1667	117.2–118.4

4.1.4 The current period: Jupiter / Ketu, 2026-09-04 to 2027-08-11

Mahadasha Jupiter, 2019-09-29 to 2035-09-29 (age 39.4–55.4)

Antardasha Ketu, 2026-09-04 to 2027-08-11 (age 46.3–47.3)

Pratyantardasha Venus, 2026-09-24 to 2026-11-20 (56.8 days)

Sookshma Saturn, 2026-10-31 to 2026-11-09 (9.0 days)

Apply the rule set. Jupiter sits in Simha 6°48’25”, the 4th house, in a friend’s sign; it is the chart’s strongest planet by absolute *Shadbala* at 545.9 virupas (9.10 *rupas*, 140% of the 390 requirement), and it rules the 8th and 11th. Ketu is in Kumbha 1°38’14” (mean; 1°50’32” true), the 10th house, in Dhanishta pada 3. The mutual distance is the key fact: counting Simha to Kumbha gives **Ketu in the 7th from Jupiter**. That is a mutual *kendra* – by the rule set above, structurally supportive rather than afflicted – but it is the opposition, so the relationship is one of confrontation across an axis rather than easy cooperation.

The axis matters more than either end. Rahu is in Simha in the 4th, conjunct Jupiter at an orb of 5.17° (the *Guru-Chandala* configuration) and conjunct Mars at 5.35°; Ketu is opposite in the 10th. The Rahu-Ketu axis therefore lies exactly across 4 and 10 – home, land, inner base, the mother’s domain against profession, standing, visible position. A Ketu *Antardasha* activates the Ketu pole of a polarity the chart already carries, and it does so inside the *Mahadasha* of a planet that is itself sitting on the Rahu end.

Ketu owns no sign, so it functions as an agent. Two agencies are decisive here. First, its dispositor: Kumbha is Saturn’s, and Saturn is the *sole Yogakaraka* for Vrishabha Lagna, ruling both the 9th and the 10th – Ketu is thus in the 10th, in a sign owned by the planet that rules that very house, and that planet is *Amatyakaraka*. Second, its *nakshatra* lord: Dhanishta is Mars’s, and Mars stands within 11 arc-minutes of Jupiter (0.183°, *Guru-Mangala*). Ketu therefore transmits Saturn’s professional signification through a Mars-Jupiter channel that is physically fused with the *Mahadasha* lord. The period’s subject matter is real and professional, not abstract.

But Saturn, the dispositor on which so much depends, is impeded: retrograde, in Simha which is an enemy sign, *Kala bala* only 67.2 of a 300 requirement, and – most tellingly – just **1 bindu** in its own

Bhinnashtakavarga in the sign it occupies, the single weakest *kakshya* reading in the chart. Against that, Kumbha itself carries **36 *Sarvashtakavarga* bindus**, the second-strongest sign in the chart after Mithuna's 38, so the *field* Ketu occupies is well supported even though the planet has no ownership and its dispositor is strained.

> Read Jupiter/Ketu as a re-evaluation window, not an expansion one. Jupiter promises growth; Ketu is the classical significator of *vairagya* – detachment, relinquishment, the loosening of a hold on position – and it is operating from the 10th. Combined with a 10th-house field of 36 bindus and a strained Saturn as dispositor, the configuration classically indicates that the question of position is reopened rather than answered: a period for auditing what one has built and deciding what to carry forward, with the substantive expansion deferred to the Venus *bhukti* that follows in 2027. Periods of this shape tend to produce clarity by subtraction.

> *Brihat Parashara Hora Shastra* and *Saravali* are severe about Ketu *bhuktis* in general terms, and *Mansagari* more so. That severity is written without reference to the dispositor or the mutual distance, and it is contested. B.V. Raman and most twentieth-century writers moderate it precisely by those factors – here a mutual *kendra* rather than a 6/8/12, a 36-bindu sign, and a dispositor who is the *Yogakaraka*. Report the classical phrasing as what the texts say, not as a forecast. Nothing in this configuration predicts loss; it describes a disposition toward reassessment, and the native retains the decision.

4.1.4.1 Pratyantardasha ladder inside Jupiter / Ketu

Pratyantar	From	To	Days	From Ketu
Ketu	2026-09-04	2026-09-24	19.9	conjunct
Venus	2026-09-24	2026-11-20	56.8	5th
Sun	2026-11-20	2026-12-07	17.0	3rd
Moon	2026-12-07	2027-01-05	28.4	12th
Mars	2027-01-05	2027-01-24	19.9	7th
Rahu	2027-01-24	2027-03-17	51.1	7th
Jupiter	2027-03-17	2027-05-01	45.5	7th
Saturn	2027-05-01	2027-06-24	54.0	7th
Mercury	2027-06-24	2027-08-11	48.3	3rd

Venus, to 2026-11-20
Venus is Lagna lord in the 2nd, in Mithuna 3°04'24", friend's sign, 445.7 virupas (135% of a 330 requirement), with 6 bindus in its own sign – the highest *kakshya* reading in the chart – and *Vimsopaka* 9.56/20. It is 5th from Ketu and 11th from Jupiter. The most constructive window of the whole *Antardasha*, and the one currently running.

Sun, to 2026-12-07
Sun is exalted in Mesha 22°09'13" but placed in the 12th, and it rules the 4th – the house Rahu occupies. It is 3rd from Ketu and 9th from Jupiter, and it is the *janma nakshatra* lord. A short, bright, somewhat inward-turned stretch: authority and paternal matters (the Sun's natural signification; note that *Pitrikaraka* in this chart is Mars, while the Sun is *Bhratrikaraka*) surface in a 12th-house register rather than a public one.

Moon, to 2027-01-05
The only genuinely awkward *Pratyantardasha* here. Moon is 12th from Ketu and 6th from Jupiter – the latter being the *Shakata* relationship the chart already carries. Offsetting it: Moon is *vargottama*

(Makara in both D1 and D9), in the 9th, with 5 bindus. Expect emotional recalibration rather than difficulty; *Shakata* is widely held cancelled when the Moon is in a *trikona*, as here.

Mars, to 2027-01-24
Mars is in the 7th from Ketu and conjunct Jupiter at 0.183°, and it is Ketu's own *nakshatra* lord – so this is the *Antardasha* lord's own agent coming to the surface. Mars is the weakest planet by absolute *Shadbala* (370.8 virupas) with *Dig bala* of only 4.6. Short, energetic, and prone to friction; the *Guru-Mangala* fusion gives it direction rather than mere heat.

Rahu, to 2027-03-17
Rahu is *Atmakaraka* (28.3628°), conjunct Jupiter at 5.17°, and 7th from Ketu. The third-longest *Pratyantardasha* of the period, after Venus (56.8 days) and Saturn (54.0 days). This restates *Guru-Chandala* at the third level while the node axis is already the *Antardasha* theme – the ambition pole answering the detachment pole.

Jupiter, to 2027-05-01
The *Mahadasha* lord in its own *Pratyantardasha*: strongest planet in the chart, 4th house, ruling the 8th and 11th, 7th from Ketu. Note the countervailing figure – Jupiter's *Vimsopaka bala* is only 5.94/20, the lowest of the seven, so divisional support is thin even where *Shadbala* is highest. Expect intent to clarify more than circumstances to change.

Saturn, to 2027-06-24
Yogakaraka and Ketu's dispositor, so this is structurally the period in which the *Antardasha*'s professional question is most directly put. Saturn is 136% of requirement and holds the best *Vimsopaka* in the chart at 10.31/20, but is retrograde in an enemy sign with 1 bindu. Weight and delay in equal measure.

Mercury, to 2027-08-11
Mercury is 3rd from Ketu, 9th from Jupiter, rules the 2nd and 5th, and is *combust* at 8.42° from the Sun in the 12th. Its *Shadbala* of 470.0 virupas is only 112% of its 420 requirement – the lowest margin of any planet – though its *Kala bala* of 204.8 is the highest. A transitional, communicative close to the *Antardasha*.

4.1.5 Jupiter / Venus, 2027-08-11 to 2030-04-11: the constructive window

At 2.6667 years (16 × 20/120) this is the longest *Antardasha* of the Jupiter *Mahadasha* and, on the rule set, the most benign. Venus is **Lagna lord** in the 2nd house of wealth and speech, in Mithuna – the chart's strongest sign at 38 *Sarvashtakavarga* bindus – in a friend's sign, at 135% of its *Shadbala* requirement with 6 bindus in its own *Bhinnashtakavarga* and *Vimsopaka* 9.56/20. The chart data flags exactly this as the *dhana-yoga* signature. Venus is **11th from Jupiter**: the acquisitive distance, and the single most favourable mutual relationship available in this *Mahadasha*. A refinement worth noting – the Lagna falls in Mrigashira pada 2 and Venus sits in Mrigashira pada 3, so the Ascendant and its lord share one *nakshatra* under Mars; the identification of self with Venusian subject matter is unusually direct.

Two qualifications. Venus carries a *Drik bala* of −1.5 virupas, the only negative aspectual figure in the chart, and it is *Gnatikaraka*; and Venus also rules the 6th. Benefit in this *bhukti* classically arrives through effort and friction managed, not frictionlessly.

Pratyantar	From	To	Days	From Venus
Venus	2027-08-11	2028-01-21	162.3	conjunct
Sun	2028-01-21	2028-03-09	48.7	11th
Moon	2028-03-09	2028-05-29	81.2	8th
Mars	2028-05-29	2028-07-25	56.8	3rd

Pratyantar	From	To	Days	From Venus
Rahu	2028-07-25	2028-12-18	146.1	3rd
Jupiter	2028-12-18	2029-04-27	129.9	3rd
Saturn	2029-04-27	2029-09-28	154.2	3rd
Mercury	2029-09-28	2030-02-13	138.0	11th
Ketu	2030-02-13	2030-04-11	56.8	9th

The ladder is notably clean: *not one Pratyantardasha* lord falls in the 6th or 12th from Venus. The strongest sub-windows are Venus/Venus (162.3 days, to 2028-01-21) and Mercury (138.0 days, to 2030-02-13) – Mercury being both 11th from Venus and Venus's own dispositor, though combust. The one to treat with care is Moon (81.2 days, to 2028-05-29), 8th from Venus and 6th from Jupiter simultaneously; the Moon is *Darakaraka* and Venus the natural partnership *karaka*, so relationship themes are classically indicated to need attention there. The long Rahu (146.1 days) and Saturn (154.2 days) stretches are each 3rd from Venus – the *upachaya* distance, read as effortful but productive.

4.1.6 Closing Antardashas of the Jupiter Mahadasha

Jupiter / Sun, 2030-04-11 to 2031-01-28 (0.8000 yr, age 49.9–50.7)
Sun is exalted (22°09'13" Mesha), 133% of requirement, *Naisargika bala* at the maximum 60.0, and 9th from Jupiter – a mutual *trikona*, which is supportive. But it occupies the 12th and rules the 4th, and its *Drik bala* is a bare 0.4. Exaltation expressed through a house of withdrawal: the chart points toward recognition that is real but not public, and toward matters of home and the 4th resurfacing.

Jupiter / Moon, 2031-01-28 to 2032-05-29 (1.3333 yr, age 50.7–52.1)
This restates *Shakata dosha* by *dasha*: the chart data records Moon as 6th from Jupiter, and the same configuration now times a 16-month period. *Mansagari* and *Saravali* are harsh on *Shakata*; the cancellation argument is strong here and widely accepted – Moon is *vargottama* in Makara, in the 9th (*trikona*), 113% of requirement, with 5 bindus, and *Kemadruma* is itself cancelled by Sun and Mercury in a *kendra* from the Moon. Treat as a period of fluctuating footing and strong inner orientation, with the fatalistic classical reading explicitly contested. Moon's *Dig bala* of 16.8 is the second-lowest in the chart, after Mars's 4.6 – directional support is genuinely thin.

Jupiter / Mars, 2032-05-29 to 2033-05-05 (0.9333 yr, age 52.1–53.0)
The *Guru-Mangala yoga* comes up by *dasha*: Mars and Jupiter are in the same sign at an orb of 0.183°, eleven arc-minutes, which is as tight a conjunction as this chart contains. Mars rules the 7th and 12th and sits in the 4th, carrying *Kuja dosha* from both Lagna (Mars in H4) and Moon (Mars 8th from Moon), with the mitigations the data records – conjunction with Jupiter, and Simha being the Sun's sign. Decisive, initiative-heavy, and short; Mars's 124% of requirement sits against the lowest absolute *Shadbala* in the chart.

Jupiter / Rahu, 2033-05-05 to 2035-09-29 (2.4000 yr, age 53.0–55.4)
The *Mahadasha* closes by restating its own most contested configuration: *Guru-Chandala*, Jupiter and Rahu conjunct in Simha at 5.17° in the 4th, now operating as *Mahadasha* lord plus *Antardasha* lord together. Rahu is also *Atmakaraka*. *BPHS* and *Saravali* read Jupiter-Rahu as corruption of counsel and loss of merit; Raman and most modern writers read it as unorthodox or self-taught wisdom, a teacher outside the tradition. Both readings should be reported. Structurally this is a 29-month period in which the identity question (*Atmakaraka*) and the wisdom question (Jupiter) are forced into the same frame, immediately before Saturn takes over.

4.1.7 Forward note: the opening of the Saturn Mahadasha

Saturn / Saturn, 2035-09-29 to 2038-10-02 (3.0083 yr, age 55.4–58.4)
The *Yogakaraka*'s own period at both levels, and on paper the structural high point of the chart: Saturn alone rules the 9th and 10th from Vrishabha Lagna, sits in the 4th – a *kendra* – giving an intrinsic *Raja yoga*, and is conjunct Mars (7th/12th lord) for a second *Raja yoga* by *kendra-trikona* conjunction. It holds the chart's best *Vimsopaka bala* at 10.31/20 and 136% of a 300-virupa requirement. The impediments are equally explicit and the chart data states them plainly: retrograde, enemy sign, *Kala bala* 67.2/300, and 1 bindu in its own *Bhinnashtakavarga*. The classical verdict is *yoga present, delivery impeded* – results that are substantial but slow, and earned rather than conferred.

Saturn / Mercury, 2038-10-02 to 2041-06-11 (2.6917 yr, age 58.4–61.1)
Mercury is 9th from Saturn – a mutual *trikona*, supportive – rules the 2nd and 5th, and holds the chart's highest *Kala bala* at 204.8 virupas. Against that it is combust at 8.42°, in the 12th, at only 112% of its 420-virupa requirement, with the lowest *Cheshta bala* of 30.7. The *Budha-Aditya yoga* it forms with the exalted Sun is real but compromised by that combustion.

Saturn / Ketu, 2041-06-11 to 2042-07-21 (1.1083 yr, age 61.1–62.2)
Ketu is 7th from Saturn and placed *in Saturn's own sign*, Kumbha, in the 10th – so the dispositor relationship that governed Jupiter/Ketu in 2026–27 now runs at full strength, with Saturn as the *Mahadasha* lord rather than a background factor. Thematically this is the same reassessment-of-position question returning fifteen years later in a more consequential frame.

> **Dating uncertainty.** Every date in this section inherits the birth-time uncertainty, and the error does not shrink with distance – it is a rigid translation of the entire tree, not a drift. Direct arithmetic: the Moon's recorded speed is 13.2888°/day, so 4 minutes of clock error moves it 0.0369°, which is 0.277% of the 13°20' *nakshatra* span and therefore 0.0166 years ≈ 6 days of shift in the 4.399060-year Sun balance. The rate is about **1.5 days of *dasha* shift per minute of clock error**: roughly **6 days** for a 4-minute error, and roughly **11 days** across the full 7.5-minute gap to the Gemini boundary, which is the largest error the recorded time can plausibly conceal. Those are the two figures quoted elsewhere in this report, and they are the same rate applied to different assumed errors, not competing estimates. Treat every date as the *centre of a window*, never a switch, and allow about a month either side for the long *Antardashas*. For the short *Pratyantardashas* – Sun at 17.0 days, Ketu at 19.9 days, Mars at 19.9 days – the uncertainty is a material fraction of the period itself, and those sub-windows should not be used for fine timing at all.
> Two further sensitivities bear directly on this section. **(a)** The Moon is only 13 arc-minutes into Uttara Ashadha pada 2 (Makara 0°13'27.5", the pada beginning at Makara 0°00'); at 13.2888°/day that is 24.3 minutes of travel, so the pada began at approximately 08:00:42 IST. The *nakshatra* and therefore the Sun *Mahadasha* start are robust; only the balance is sensitive. **(b)** The Lagna is 28°15'06" Vrishabha, just 7.5 minutes of clock time from Mithuna rising at 08:32:28 IST. If the recorded 08:25 is rounded, the house framework shifts one sign and the *readings* above change substantially even though the *dates* do not: Jupiter would move from the 4th to the 3rd, Ketu from the 10th to the 9th, Venus from the 2nd to the 1st, Venus would cease to be Lagna lord in favour of Mercury, and Saturn would lose its *Yogakaraka* status entirely (ruling the 8th and 9th from Mithuna instead of the 9th and 10th). The mutual distances between *dasha* lords – Ketu 7th from Jupiter, Venus 11th from Jupiter, Moon 6th from Jupiter – are sign-to-sign and so survive unchanged. The relational layer of this analysis is robust; the house-attribution layer is not.

CHAPTER 5

Yogas

5.1 Yogas

A *yoga* is a defined combination – conjunction, aspect, lordship relation, or positional count from the Lagna or Moon – to which the classical texts attach a named meaning. Absences matter as much as presences. Astrology is not an empirical science: nothing below is a medical, legal or financial statement, and nothing below describes events. These are tendencies the doctrine attaches to configurations; agency remains with the native.

> **(a) The Lagna is 7.5 minutes from changing sign.** The Ascendant stands at Vrishabha 28°15'06", and Gemini begins rising at 08:32:28 IST. If the recorded 08:25 is rounded, the house framework shifts one sign and with it every *house-* and *lordship-referenced* yoga below. Under Gemini, Saturn would rule the 8th and 9th rather than the 9th and 10th and would **cease to be Yogakaraka**; the four-planet Leo group would fall in the 3rd, not the 4th; Kuja Dosha from the Lagna would vanish; Budha-Aditya would sit in the 11th.
> **(b) The Moon-referenced yogas are far more robust.** The Moon is 13'28" into Capricorn, exactly where Uttara Ashadha pada 2 begins. At 13.2888° daily motion – about 33 arc-seconds per minute – that boundary was crossed roughly 24 minutes before the recorded time. Shakata, Chandra-Adhi, Kemadruma and its cancellation, Gaja-Kesari and Kuja Dosha from the Moon therefore tolerate about 24 minutes of earlier error, against 7.5 for the Lagna. The nakshatra, and so the Sun Mahadasha start, are secure; only the dasha *balance* is sensitive, at roughly plus or minus 6 days per 4 minutes of error – about 1.5 days per minute.

5.1.1 Summary of combinations tested

Yoga	Status	Deciding orb or condition
Guru-Mangala	Present	Jupiter + Mars in Simha (4th), orb 0.183° (11')
Guru-Chandala	Present	Jupiter + Rahu in Simha (4th), orb 5.170°
Angaraka	Present	Mars + Rahu in Simha (4th), orb 5.352°
Budha-Aditya	Present, impaired	Sun + Mercury in Mesha (12th), orb 8.422°; Mercury combust
Saturn as Yogakaraka	Present, impeded	Saturn rules 9 and 10, sits in the 4th (kendra); retrograde, enemy sign
Raja Yoga (Mars–Saturn)	Present, weak	Kendra lord Mars (7, 12) with trikona lord Saturn (9, 10), same sign, orb 19.854°
Raja Yoga (Sun–Mercury)	Present, contaminated	Kendra lord Sun (4) with trikona lord Mercury (5), orb 8.422°, in the 12th
Parivartana (Sun–Mars)	Present	Sun in Mesha (Mars's sign), Mars in Simha (Sun's sign); a 4th / 12th exchange
Dhana indication	Present	Lagna lord Venus in the 2nd, friendly sign, 6 bindus, 135% of Shadbala requirement
Shakata	Present, contested	Moon is 6th from Jupiter
Chandra-Adhi	Partial only	Jupiter 8th and Venus 6th from Moon; Mercury is 4th from Moon, not 6/7/8

Yoga	Status	Deciding orb or condition
Kemadruma	Present but cancelled	2nd and 12th from Moon empty; cancelled by Sun and Mercury in the 4th (kendra) from Moon
Kuja Dosha (Lagna)	Present, mitigated	Mars in the 4th from Taurus
Kuja Dosha (Moon)	Present, mitigated	Mars is 8th from the Moon
Kuja Dosha (Venus)	Absent	Mars is 3rd from Venus, not 1/2/4/7/8/12
Ruchaka	Absent	Mars in Simha, a friend's sign – kendra satisfied, dignity fails
Bhadra	Absent	Mercury in Mesha (neutral) in the 12th – both conditions fail
Hamsa	Absent	Jupiter in Simha, a friend's sign – kendra satisfied, dignity fails
Malavya	Absent	Venus in Mithuna (friend) in the 2nd – both conditions fail
Sasa	Absent	Saturn in Simha, an *enemy's* sign – kendra satisfied, dignity fails
Kala Sarpa	Absent	Planets on both sides of the nodal axis
Gaja-Kesari	Absent	Jupiter is 8th from the Moon, not in a kendra (1/4/7/10)
Amala	Absent	10th from Lagna (Kumbha) and 10th from Moon (Tula) hold no benefic
Sunapha	Absent	2nd from Moon (Kumbha) empty of the seven grahas
Anapha	Absent	12th from Moon (Dhanu) empty
Durudhara	Absent	Requires both the 2nd and 12th from the Moon tenanted
Chandra-Mangala	Absent	Moon in Makara, Mars in Simha – no conjunction
Viparita Raja Yoga	Absent	No lord of 6, 8 or 12 occupies a dusthana

5.1.2 Guru-Mangala Yoga: an exceptionally tight conjunction

Jupiter stands at Simha 6°48'25" and Mars at Simha 6°59'22" – an orb of **0.183°, or 11 arc-minutes**. An orb this tight is genuinely rare: roughly a third of the Moon's apparent diameter. Both are further in the *same nakshatra and pada* (Magha pada 3, lord Ketu), which classical practice treats as a material intensification.

Phaladeepika and Saravali read Guru-Mangala as the union of *dharma* and *shakti*: wisdom willing to act, action that submits to principle. The indications are energetic intelligence, capacity for principled and decisive conduct, and aptitude for engineering, technical or military-strategic domains – anything requiring exact knowledge applied under pressure. The texts are equally clear on the shadow: dogmatism, a tendency to moralise the use of force, impatience with those who will not act on what they profess.

The lordships give it texture. Jupiter rules the 8th and 11th, Mars the 7th and 12th, so the yoga wires the 8th (research, the hidden) and 11th (gains, networks) to the 7th (partnership) and 12th (dissolution, foreign ground) – inside the 4th house of home, mother and land. None of those is a house of visible status: classically, capability working through depth rather than display.

5.1.3 Guru-Chandala Yoga: the counterweight

Jupiter is also with Rahu at an orb of **5.170°**. The texts call this a *dosha*: Jupiter is the *guru*, the principle of received and legitimate wisdom, and Rahu is its inversion – knowledge taken rather than given. As the texts frame it, the indications are unorthodox wisdom; *guru* relationships that break down and must be rebuilt on other terms; scepticism toward inherited authority and institutional credentialing; overreach presented as principle.

It must also be said plainly that this is one of the best-documented signatures among original thinkers and people who work across the boundary between two fields. Both readings belong in the record: the configuration describes a mind that will not take a claim on authority alone – at once the engine of originality and the mechanism of its own errors. Where the older texts are flatly condemnatory, that is what the texts say, and it is contested, not settled. Note too that Rahu at Simha 1°50' sits between the Leo cusp and the Jupiter-Mars pair: Guru-Mangala and Guru-Chandala are one configuration read two ways, and neither can be invoked alone.

5.1.4 Angaraka Yoga in the 4th house

Mars with Rahu at an orb of **5.352°** forms Angaraka. The classical attributions are forceful drive, temper that discharges rather than simmers, disputes over property and land, and – in the fatalistic register of the older texts – liability to accident. That last is reported strictly as what the texts assert, not as a prediction. In the 4th the emphasis falls on domestic friction, restlessness about home and place, and stress on the 4th-house significations of mother and land: a Mars-Rahu occupation describes settledness as constructed rather than inherited.

Jupiter's presence 11 arc-minutes from Mars materially tempers this. All three bodies occupy a span of about 5.2°, and the texts treat such a cluster as a *blend* rather than three clean independent yogas: one cannot have the sharpness of Guru-Mangala without the distortion of Guru-Chandala, nor the force of Angaraka without Jupiter's restraint eleven arc-minutes away. Retrograde Saturn at Simha 26°50' shares the sign but lies 19.854° from Mars in a different nakshatra – part of the house, not of the cluster. Note too that Leo's Sarvashtakavarga total is only **27 bindus**, below the chart's twelve-sign average of 28.1: the house carrying four grahas and three named yogas is not itself a strong sign.

5.1.5 Budha-Aditya Yoga: dignity meeting weak placement

The Sun at Mesha 22°09'13" and Mercury at Mesha 13°43'54" form Budha-Aditya at an orb of **8.422°**. The gift is intelligence joined to articulacy – analytical capacity that can be expressed.

Two facts qualify it severely. Mercury is **combust**, at 8.42° from the Sun, and both planets are in the **12th house**. The Sun is exalted, carries 519.4 virupas against a 390 requirement (133%) and holds maximum Naisargika bala at 60.0, so the dignity is real; Mercury has the *lowest* proportional Shadbala in the chart, 470.0 against 420 (112%), the lowest Cheshta bala at 30.7, and a Drik bala of 0.4. This is the classic tension of a dignified yoga in a house of dissolution. The 12th does not destroy it, it redirects it: toward research, seclusion, foreign contexts, writing done away from the public eye, and contemplative work rather than visible authority. Combustion sharpens the point – the thinking is strong; its public articulation is what is compromised.

5.1.6 Saturn as sole Yogakaraka: the chart's central contradiction

From Taurus Lagna, Saturn rules *both* the 9th (Makara) and the 10th (Kumbha) – the chief trikona of fortune and the chief kendra of action – and occupies the 4th, itself a kendra. It is therefore the **sole Yogakaraka**, and by Parashara's definition this is an *intrinsic* Raja Yoga: one planet holding both a trikona and a kendra, placed in an angle, needs no second planet to complete the combination. It is the most important single fact in the horoscope.

The counter-evidence is formidable. Saturn is **retrograde** (-0.0278° daily) and sits in Simha, the Sun's

sign – an **enemy's sign**. Its own Bhinnashtakavarga gives Leo only **1 bindu**, the lowest own-sign kakshya figure of the seven grahas, with Mars and Jupiter next lowest at 4; its BAV total of 39 ties Mars for lowest. Its **Kala bala, 67.2 virupas, is the lowest of all seven** (next lowest, Mars, 101.1), and its **Naisargika bala, 8.6, is also the lowest**.

The evidence in its favour is equally striking. Its **Sthana bala, 226.0 virupas, is the highest of all seven**, ahead of Jupiter's 218.1; its **Drik bala, 17.6, is the highest** in the chart; retrogression confers **maximum Cheshta bala, 60.0**; total Shadbala is 409.0 against a 300 requirement, i.e. **136%**, second only to Jupiter's 140%; and its **Vimsopaka bala, 10.31 / 20**, is the highest in the chart and the only figure rated "good" rather than "moderate".

Resolved honestly: the yoga is *structurally present* and *positionally strong* – Sthana, Drik and Vimsopaka all put Saturn at or near the top – but *temporally and dispositionally impeded* by the lowest Kala bala, the lowest Naisargika weight, a single Ashtakavarga bindu, enemy-sign occupation and retrogression. Classically that reads not as weakness but as high capability arriving late, through obstruction, and by endurance rather than ease. Note also that both Saturn's sign dispositor and its nakshatra dispositor (Uttara Phalguni pada 1) are the Sun, so delivery is mediated twice through a planet exalted but placed in the 12th.

This matters enormously for timing, because the **Saturn Mahadasha runs 2035-09-29 to 2054-09-29**, ages 55.4 to 74.4 – nineteen years governed by the one planet holding the chart's intrinsic Raja Yoga and simultaneously carrying its weakest temporal strength. That the Yogakaraka's own period falls so late is consistent with the "late and through obstruction" reading.

5.1.7 Raja Yogas by association, and one exchange

Mars with Saturn. Kendra lord Mars (7th, 12th) shares Simha with trikona lord Saturn (9th, 10th), satisfying the Parashari definition of a Raja Yoga by conjunction. Three qualifications are due. The orb is **19.854°**: same sign, but most authorities treat a wide same-sign conjunction as a weaker association than a close one, and the two occupy different nakshatras entirely. Mars's kendra credential is compromised by its simultaneous rulership of the 12th, a dusthana. And both are natural malefics and mutual enemies; Phaladeepika and the general tradition hold that malefic-malefic Raja Yogas deliver through conflict rather than favour.

Two the automated detection missed. The Sun rules the 4th (a kendra) and Mercury the 5th (a trikona), conjunct at 8.422° – a kendra-trikona Raja Yoga by the same definition, but contaminated: in the **12th**, trikona lord **combust**. Separately, Sun in Mesha (Mars's sign) and Mars in Simha (the Sun's sign) is a full *parivartana*; Mansagari's taxonomy makes an exchange involving a lord of 6, 8 or 12 a *Dainya* Yoga, and since the Sun occupies the 12th that is the grounded reading, with its exaltation as mitigation.

No Viparita Raja Yoga. The test is whether any lord of 6, 8 or 12 occupies a dusthana. The 6th lord Venus is in the 2nd, the 8th lord Jupiter in the 4th, the 12th lord Mars in the 4th. None is in a dusthana, so *none* of Harsha, Sarala or Vimala forms.

5.1.8 Dhana indication: the cleanest signature in the chart

Lagna lord Venus occupies the 2nd house of wealth, in Mithuna, a friend's sign. The figures are unusually consistent: **6 bindus** in Venus's own Bhinnashtakavarga for Mithuna, the highest own-sign kakshya count of any planet in the chart; a Shadbala of 445.7 against a 330 requirement, i.e. **135%**; and Mithuna carrying the chart's **highest Sarvashtakavarga total, 38 bindus**, against the twelve-sign average of 28.1. This is a clean, well-supported wealth signature and should be said so without hedging. Two qualifications: Venus also rules the 6th, so the Lagna lord carries a dusthana lordship,

which classically colours the result toward competition and service rather than inheritance; and Venus's Drik bala of -1.5 is the only negative aspectual figure in the chart.

The contrast with the *2nd lord* is stark. Mercury, which actually owns the 2nd, is combust at 8.42°, placed in the 12th, in Mesha (Sarvashtakavarga 25, among the chart's four weakest signs), with the lowest proportional Shadbala at 112%. The indication is a strong *karaka* of wealth in the house of wealth with a weak *owner* of that house – resources accruing through the native's own agency rather than through the channels the 2nd house conventionally represents.

5.1.9 Shakata Yoga and why it is heavily restricted

The Moon is 6th from Jupiter (Jupiter in Simha, Moon in Makara), forming Shakata by the letter of the rule. The texts call it a *dosha* and describe fluctuating fortune – the see-saw between gain and loss that the cart-wheel of the name refers to.

The restriction must be reported, because it is large. Many authorities, **B.V. Raman** prominent among them, either confine Shakata to narrow conditions or dismiss it outright when the Moon is otherwise strong. This Moon is **vargottama** – Makara in both Rasi and Navamsa, the only vargottama body in the chart – with a Shadbala of 406.5 against a 360 requirement (113%), 5 bindus in its own Bhinnashtakavarga, and placement in the 9th, a trikona. One point against it, for accuracy: the common clause voiding Shakata when the Moon is in a kendra from the Lagna does not apply, since this Moon is in the 9th. The mitigation rests on the vargottama status and the strength figures. Verdict: present, materially weakened, and not worth citing at this level of lunar strength. Had the birth been more than about 24 minutes earlier the Moon would be in Dhanu, 5th from Jupiter, and Shakata would not form at all.

5.1.10 Chandra-Adhi Yoga: partial only

Adhi Yoga requires the three natural benefics – Jupiter, Venus and Mercury – in the 6th, 7th and 8th from the Moon. Jupiter is 8th from the Moon and Venus 6th, but **Mercury is 4th** from the Moon (Mesha counted from Makara), outside the band, so the full yoga does not form.

The graduated reading is classical, not an improvisation: Varahamihira's Brihat Jataka, and Phaladeepika following it, scale the result by the number of benefics – three indicating sovereign rank, two a commander or minister, one a person of standing. Two participants place this in the middle tier: competence that attracts responsibility, and capacity to prevail over opposition, without the completeness the full yoga claims. The two involved are the 8th-and-11th lord and the Lagna-and-6th lord, so the partial form carries a research-and-resources flavour rather than a purely benefic one. Note the overlap: Jupiter's position 8th from the Moon both qualifies it as an Adhi contributor and disqualifies Gaja-Kesari.

5.1.11 Kemadruma Yoga: present by letter, cancelled in fact

Neither the 2nd nor the 12th from the Moon (Kumbha, Dhanu) holds any of the seven grahas, which forms Kemadruma – the yoga of isolation and want, one of the harshest-sounding names in the literature.

It is **cancelled**. The Sun and Mercury occupy Mesha, the **4th from the Moon** and therefore a kendra from the Moon, and the standard *Kemadruma-bhanga* clause voids the yoga when any planet occupies a kendra from the Moon. It is reinforced from the Lagna side, since Mars, Jupiter and Saturn tenant the 4th from the Lagna. The Moon's vargottama status further neutralises it – though in fairness, vargottama as a Kemadruma cancellation is a commentarial extension rather than an explicit BPHS clause, and should be cited as supporting rather than decisive.

This is a textbook cancellation, and bluntness is warranted: **a report that announced Kemadruma Yoga here without the cancellation would be badly wrong**, and would describe an isolation the

configuration does not support. For completeness: Ketu does occupy Kumbha, the 2nd from the Moon, but the standard reckoning counts only the seven grahas – authorities who admit the nodes would never form Kemadruma here at all.

5.1.12 Notable absences

5.1.12.1 No Panchamahapurusha Yoga forms

This is a real limitation of the chart and deserves no euphemism. None of the five great-person yogas is present:

Ruchaka (Mars)
In a kendra (the 4th) but in Simha, a friend's sign – not own or exalted. Dignity fails.

Bhadra (Mercury)
In Mesha, a neutral sign, and in the 12th. Both conditions fail.

Hamsa (Jupiter)
In a kendra (the 4th) but in Simha, a friend's sign. Dignity fails.

Malavya (Venus)
In Mithuna, a friend's sign, and in the 2nd, not a kendra. Both conditions fail.

Sasa (Saturn)
In a kendra (the 4th) but in Simha, an *enemy's* sign. Dignity fails.

Three of the five – Mars, Jupiter, Saturn – satisfy the kendra requirement and fail on dignity alone, all for the same reason: Leo is own-sign for none of them. The yoga that would have crowned the Yogakaraka, Sasa, misses purely because Saturn's kendra happens to be the Sun's house.

5.1.12.2 No Kala Sarpa Yoga

Many commercial reports get this wrong, so the test and result are both worth stating. Kala Sarpa requires all seven grahas within one of the two arcs defined by the Rahu-Ketu axis, here at Simha 1°38' and Kumbha 1°38' (mean). The **Rahu-to-Ketu arc holds Moon, Mars, Jupiter and Saturn**; the **Ketu-to-Rahu arc holds Sun, Mercury and Venus**. Planets fall on *both* sides, so **Kala Sarpa Yoga is definitively absent**.

5.1.12.3 Other absences

- **No Gaja-Kesari.** Jupiter is 8th from the Moon; the yoga requires Jupiter in a kendra (1/4/7/10) from the Moon, which the 8th is not, so the yoga does not form. Jupiter does hold a kendra from the *Lagna* – the 4th from Taurus – so authorities admitting the dual Lagna-or-Moon reference would allow it; this report follows the Moon-only reckoning on which the absence is reported.
- **No Amala.** The 10th from the Lagna is Kumbha and the 10th from the Moon is Tula; neither holds a natural benefic, so the yoga of spotless reputation fails from both reference points.
- **No Sunapha, Anapha or Durudhara.** All three depend on the 2nd and 12th from the Moon, empty of the seven grahas – the same vacancy that produced Kemadruma.
- **No Chandra-Mangala.** Moon in Makara, Mars in Simha; the yoga requires a conjunction.

5.1.13 Kuja (Mangal) Dosha: a balanced verdict

From the Lagna	**Present.** Mars occupies the 4th from Taurus, one of the dosha houses (1, 2, 4, 7, 8, 12).
From the Moon	**Present.** Mars is 8th from the Moon in Makara.
From Venus	**Absent.** Mars is 3rd from Venus, outside the dosha positions.

The mitigations are substantial. First and most important, **Mars is conjunct Jupiter at an orb of 11 arc-minutes**; Mars-Jupiter conjunction is a cancellation condition accepted by the large majority of authorities, and 0.183° is about as unambiguous an instance as the condition admits. Second, Mars occupies **Simha, the Sun's sign**, which several authorities list among the signs exempting Mars from the dosha. Third, the dosha does not arise from the Venus reference point at all.

Two things need saying plainly. **Kuja Dosha is among the most over-sold items in commercial astrology** – routinely announced without the cancellation tests, and used to generate anxiety about partnership where the doctrine itself supplies the remedy. And the cancellation conditions are not a modern softening invented to reassure clients: they are part of the received classical doctrine, stated in the same texts that describe the dosha. A practitioner who cites the dosha and omits the *bhanga* clauses is quoting half a rule.

Verdict: technically present from two of three reference points, and *substantially cancelled* by the tightest conjunction in the chart. The residual indication is temperamental rather than a verdict on partnership – force applied to the domestic sphere, friction about place and foundation. Under a Gemini Lagna, 7.5 minutes away, the Lagna instance would not arise at all; the Moon-based instance would survive.

> **The yoga picture in one view.** No Panchamahapurusha Yoga forms – three of the five miss on dignity alone, all because Leo is own-sign for none of their lords. What the chart has instead is a genuine *intrinsic* Raja Yoga: Saturn ruling both the 9th and 10th from Taurus and sitting in the 4th, a kendra. That yoga is structurally real and positionally strong (highest Sthana bala at 226.0, highest Drik bala at 17.6, highest Vimsopaka at 10.31 / 20, 136% of Shadbala requirement) and simultaneously impeded (retrograde, enemy sign, 1 Ashtakavarga bindu, lowest Kala bala at 67.2, lowest Naisargika bala at 8.6). Alongside it sits an exceptionally tight Guru-Mangala at 11 arc-minutes.
>
> The decisive fact is **concentration**. The 4th house carries four grahas and three overlapping yogas at once – Guru-Mangala, Guru-Chandala and Angaraka, all inside a 5.2° span – plus the retrograde Yogakaraka 20° away in the same sign, whose Sarvashtakavarga total of 27 is below the chart average of 28.1. The chart's power is not distributed; it is stacked in one house. And it is *mixed* power: wisdom inseparable from its inversion, force inseparable from its restraint, a Raja Yoga inseparable from its own obstruction. The one clean asset in the inventory is Venus in the 2nd – friendly sign, 6 bindus, 135% of requirement, in the chart's strongest sign at 38 bindus.
>
> And all of it rests on 7.5 minutes of recorded birth time. Rectification is not an optional refinement for this chart; it is the precondition for reading it.

CHAPTER 6

Gunas

6.1 Gunas: The Three Qualities

6.1.1 Doctrine before measurement

The three *gunas* are not virtues. In Samkhya they are the constituent modes of *prakriti*, and nothing manifest is made of one alone. *Sattva* is clarity and equilibrium: the mode by which a thing can be known. *Rajas* is activity, desire, motion: the mode by which a thing changes. *Tamas* is inertia, concealment, density: the mode by which a thing persists and resists dissolution.

The *Bhagavad Gita*'s fourteenth chapter describes each *guna* as a binding – *sattva* binds through attachment to happiness and knowledge no less surely than *tamas* binds through heedlessness – and sets the goal as *gunatita*, passing beyond all three. Reading *sattva* as a high score and *tamas* as a low one distorts the source. *Tamas* is what consolidates: the mode of bone, foundation, archive, and keeping faith with a commitment after the enthusiasm has gone. These are descriptive modes, not moral grades.

6.1.2 How the gunas enter Jyotisha

Jyotisha applies the doctrine along three largely independent channels, which do not always agree: **planetary nature** (each *graha* carries a native *guna* – the only channel that can be quantified, since Shadbala gives each planet a number); **nakshatra *gana*** (Deva, Manushya, Rakshasa, commonly mapped to *sattva*, *rajas*, *tamas*); and **sign grouping** (movable, fixed and dual mapped to *rajas*, *tamas*, *sattva*). The planetary attribution used here is the standard one:

Planet	Guna	Shadbala	Dignity / note
Sun	Sattva	519.4	Exalted in Mesha, 12th house
Moon	Sattva	406.5	Vargottama in Makara, 9th house
Jupiter	Sattva	545.9	Strongest planet, 4th house
Mercury	Rajas	470.0	Combust, 8.42° from Sun, 12th house
Venus	Rajas	445.7	Lagna lord, friend's sign, 2nd house
Mars	Tamas	370.8	Friend's sign, 4th house
Saturn	Tamas	409.0	Retrograde, enemy's sign, 4th house
Rahu	Tamas	194.95	Half mean malefic weight (see method)
Ketu	Tamas	194.95	Half mean malefic weight (see method)

The authorities are not unanimous. Varahamihira's *Brihat Jataka* and the *Saravali* tradition give Mars a fiery, assertive nature that several later writers – and most Ayurvedic cross-mappings – read as *rajasic*; the *tamasic* Mars follows the stricter benefic/malefic sorting. Mercury is routinely called mixed, taking the quality of its associations, which makes any single-bin assignment arbitrary. Both dissents move the result substantially, so the table below quantifies by how much.

6.1.3 The quantified profile

Method, stated plainly. Each planet's total Shadbala in *virupas* is credited to its *guna* bin, and the bins are expressed as shares of their sum. Rahu and Ketu, having no Shadbala, are each entered at

half the mean of the two malefic totals – half of $(370.8 + 409.0)/2 = 389.9$, i.e. 194.95 apiece. Total weight 3557.2 *virupas*.

Guna	Bodies	Virupas	Share
Sattva	Sun, Moon, Jupiter	1471.7	41.4%
Tamas	Mars, Saturn, Rahu, Ketu	1169.6	32.9%
Rajas	Mercury, Venus	915.8	25.7%

> This weighting is an analytical construction, not a classical procedure. No classical text – not Parashara, not Varahamihira, not *Phaladeepika* – computes a *virupa*-weighted *guna* score; the texts give qualitative attributions and stop there. Shadbala was designed to compare a planet against its own requirement, not to be summed across planets into a composite index. Treat these percentages as a way of organising the chart's actual strengths, not as a measurement of anything.

The construction is fragile in identifiable ways:

Variant of the method	Sattva	Rajas	Tamas
As reported (standard attribution)	41.4%	25.7%	32.9%
Mars read as rajasic	41.4%	36.2%	22.5%
Mercury split 50/50 sattva–rajas	48.0%	19.1%	32.9%
Both of the above	48.0%	29.6%	22.5%
Nodes at full mean malefic weight	37.3%	23.2%	39.5%
Nodes excluded entirely	46.5%	28.9%	24.6%

Sattva leads under four of the five variants; weighting the nodes at full mean malefic weight is the single case that displaces it, putting *tamas* first at 39.5% against *sattva*'s 37.3%. The lead is therefore conditional on the nodal weighting, not robust. Second place is not robust at all either: reclassifying Mars alone restores the conventional ordering *sattva* > *rajas* > *tamas*. And *rajas* last is the least robust of the three orderings rather than a surviving headline – it holds in only two variants of five, a minority of them.

6.1.4 Reading the profile

Sattva leads at 41.4% but holds no majority. *Tamas* at 32.9% is a strong second, and *rajas* at 25.7% is weakest. That ordering is unusual and informative: it describes a temperament with real clarity and a real capacity for stillness and consolidation, alongside comparatively less appetite for motion and acquisition. Strength in depth, patience, principle and sustained holding; relative weakness in self-promotion, opportunism, quick lateral movement and sheer drive.

> The profile reads as a long-cycle instrument. Its indicated advantage lies in work that rewards being held for years; its indicated cost is slowness to start, and difficulty converting clarity into motion without an external deadline.

Supporting cross-checks. The strongest planet is Jupiter, *sattvic*, at 545.9 *virupas* and 140% of its 390-*virupa* requirement. The Moon is *vargottama* (Makara in both D1 and D9), the chart's only such planet, and the Sun is exalted in Mesha. All three *sattvic* bodies are in good condition, and 62.9% of the *sattvic* weight sits in the 9th and 12th – the *dharma* and *moksha* ends of the chart rather than the transactional ones.

Complicating cross-checks. Saturn, *tamasic*, has the highest Sthana bala of all seven at 226.0, ahead of Jupiter's 218.1, and the best Vimsopaka bala at 10.31/20 – the only score the data grades

good – while Jupiter, strongest by Shadbala, has the *worst* Vimsopaka at 5.94/20. The strongest *sattvic* body is thus the least consistent across the divisional charts and the strongest *tamasic* body the most consistent. Saturn is also the sole *Yogakaraka* for Vrishabha Lagna, ruling both 9th and 10th: the chart's structural keystone is *tamasic*. And the Jaimini *Atmakaraka* is Rahu at 28.3628° with *Amatyakaraka* Saturn at 26.8434° – the two highest *chara karakas* both *tamasic*.

The *tamas* is concentrated, not diffuse: Mars, Saturn and Rahu all occupy the 4th house in Simha, together holding 974.75 *virupas* – 83.3% of the *tamasic* total – in one house. That house is dominant by tenancy, not endorsement: it carries only 27 SAV *bindus*, mid-table among the twelve and well behind the 2nd (38) and 10th (36).

Where the low rajas comes from. Partly a real impediment, partly an artefact. Both *rajasic* planets are genuinely hampered: Mercury is combust at 8.42° from the Sun with the lowest Cheshta bala of the seven at 30.7 – *cheshta* being motional, effortful strength, *rajas*'s own department – and Venus carries the chart's only negative Drik bala at −1.5. Neither occupies an angle (Venus 2nd, Mercury 12th), so of the five bodies tenanting *kendras* – Mars, Jupiter, Saturn and Rahu in the 4th, Ketu in the 10th – four are *tamasic*, one *sattvic*, none *rajasic*. *Rajas* has no angular platform here.

The artefact: it is sometimes said that Mercury and Venus are the two lowest planets on percent-of-requirement. The data says otherwise. Mercury at 112% is lowest, but Venus at 135% is *third highest* of the seven, behind only Jupiter (140%) and Saturn (136%); second lowest is the Moon at 113%. By absolute Shadbala, Mercury (470.0) and Venus (445.7) rank third and fourth – respectable, not weak. *Rajas* scores lowest largely because its bin holds only *two* bodies against three *sattvic* and four *tamasic*; per planet the bins run *sattva* 490.6, *rajas* 457.9, *tamas* 292.4, a wide spread – *sattva* 68% above *tamas* – in which *rajas* still sits in the middle, the *tamas* figure held down by the two nodes entering that bin at half weight, 194.95 apiece. The aggregate ordering is substantially a population effect, and no interpretation should lean on it harder than that allows.

6.1.5 Nakshatra- and sign-level guna

The four classificatory layers of the birth data disagree, which is itself the finding:

Layer	Classification	Mapped guna
Moon nakshatra: Uttara Ashadha pada 2	Manushya *gana*	Rajas
Moon sign: Makara	*Chara* (movable)	Rajas
Lagna nakshatra: Mrigashira pada 2	Deva *gana*	Sattva
Lagna sign: Vrishabha	*Sthira* (fixed)	Tamas

The lunar side classifies *rajasic* on both counts; the ascendant side splits *sattva* against *tamas*; the planetary profile makes *rajas* the smallest share. The instinctual, Moon-governed layer is thus classed for motion precisely where the measured chart supplies least of it – a mismatch between what the mind is classified to want and what the planetary strengths deliver. This compounds the *dvandva* already present in the *yoni* clash (Mongoose for the Moon's *nakshatra* against Serpent for the Lagna's, natural enemies); see the Dwandwa section, where the same polarity is treated structurally. Uttara Ashadha's *nadi* is Antya, its *dosha* Kapha, its *tattva* Earth as is the Lagna sign; the Ayurvedic correspondence of Kapha with *tamas* agrees with *tamas* placing second, though it belongs to *Ayurveda* rather than *Jyotisha* and nothing medical should be read into it.

> The *gana*-to-*guna* mapping is a commonly used correspondence, not a universal classical rule. Parashara introduces *gana* for *Gana Kuta* in compatibility reckoning, not as a *guna* assignment, and the movable/-fixed/dual mapping is likewise a later convenience. Both are reasonable; neither is scriptural.

6.1.6 Guna and the dasha sequence

This is the most practically useful application, since a *Mahadasha* lord's *guna* colours the whole stretch it governs.

Mahadasha	Period	Years	Guna
Sun	1980-05-06 to 1984-09-29	4.3991	Sattva
Moon	1984-09-29 to 1994-09-29	10.0000	Sattva
Mars	1994-09-29 to 2001-09-29	7.0000	Tamas
Rahu	2001-09-29 to 2019-09-29	18.0000	Tamas
Jupiter	2019-09-29 to 2035-09-29	16.0000	Sattva (current)
Saturn	2035-09-29 to 2054-09-29	19.0000	Tamas
Mercury	2054-09-29 to 2071-09-29	17.0000	Rajas
Ketu	2071-09-29 to 2078-09-28	7.0000	Tamas
Venus	2078-09-28 to 2098-09-28	20.0000	Rajas

The shape is clear: a *sattvic* first 14.4 years (the Sun's 4.3991-year balance plus the Moon's decade); then twenty-five continuous *tamasic* years, Mars and Rahu, September 1994 to September 2019, ages 14.4 to 39.4; then the current sixteen-year *sattvic* Jupiter window; then nineteen *tamasic* Saturn years; and only late in life the two long *rajasic* dashas, Mercury's seventeen and Venus's twenty.

Across the 118.4 years of the cycle from birth the allocation inverts the natal profile: *tamasic* dashas take 51.00 years (43.1%), *rajasic* 37.00 years (31.3%), *sattvic* only 30.40 years (25.7%). The temperament is *sattva*-led; the timeline is *tamas*-led. Reclassifying Mars as *rajasic* ties *tamasic* and *rajasic* time at 37.2% each and still leaves *sattvic* time lowest – so that scarcity is the robust part.

> The Jupiter *Mahadasha* from 29 September 2019 to 29 September 2035 is the longest clearly *sattvic* stretch of the whole cycle – sixteen years against the Moon's ten and the Sun's 4.4 – and it is governed by the chart's strongest planet (545.9 *virupas*, 140% of requirement). What follows immediately is nineteen *tamasic* Saturn years. On this framework's own logic, that makes the present window the natural one for consolidating clarity, for study, for teaching, and for whatever is intended to outlast the person – not because later periods are bad, but because the mode that favours such work is scarce in this timeline and is now, and at length, available.

Two qualifications keep that honest. Jupiter sits with Rahu at 5.17° (Guru-Chandala), is in a Shakata relation with the Moon (the Moon falls 6th from Jupiter; Jupiter is 8th from the Moon), rules the 8th and 11th rather than a *dharma* trine, and holds the chart's weakest Vimsopaka bala at 5.94/20 – a strong *sattvic* window, not an unobstructed one. And sub-periods carry their own *gunas*: the stack on 3 November 2026 runs Jupiter (*sattva*) / Ketu (*tamas*) / Venus (*rajas*) / Saturn (*tamas*), all three modes live at once. The Ketu *Antardasha* to 11 August 2027 is a *tamasic* interval inside a *sattvic* era – classically withdrawal and pruning rather than expansion.

6.1.7 Working with this configuration

Generic advice would be to cultivate *sattva*. Here that is the wrong prescription: *sattva* is already the leading share and *rajas* the deficit, so more contemplation adds to the surplus. What the profile points toward instead:

Initiate and finish.
Where *rajas* is scarce, the useful discipline is starting things and completing them on a declared date, not further reflection. External deadlines substitute for the drive the chart supplies least of.

Watch rootedness becoming stasis.
With 83.3% of the *tamasic* weight in the 4th house of home, land and foundations, the classical risk is not laziness but over-attachment to the settled arrangement – staying because leaving is effortful. Deliberate disruption of routine is the counterweight.

Vihara and ahara.
Brisk daily motion, early rising against the Kapha-heavy *nadi*, and varied rather than fixed routine address the *rajas* deficit where added meditation would not. The classical *sattvic* diet is light and fresh, the *tamas*-reducing direction away from stale and over-heavy food: traditional *Ayurvedic* counsel, not medical advice.

Jupiter and Moon support.
Thursday observance, study and teaching, and *Guru*-related charity align with the strongest *sattvic* body and the current *Mahadasha*; Monday observance supports the *vargottama* Moon.

Venus as the rajas channel.
Venus is both Lagna lord and one of only two *rajasic* bodies, carrying the chart's one negative Drik bala at −1.5. Venusian engagement – art, music, aesthetics, company, craft – supplies motion without abandoning the chart's signature. Under either candidate Lagna the ruler is a *rajasic* planet, so *rajas* carries structural importance out of proportion to its 25.7% share.

6.1.8 Two sensitivities bearing on this section

The Lagna is 7.5 minutes from Mithuna. The ascendant is Vrishabha 28°15'06", and Mithuna (Gemini) rises at 08:32:28 IST. If the recorded 08:25 is rounded, the house framework shifts one sign and three things here change. The *tamasic* cluster moves from the 4th house to the 3rd, re-reading the concentrated *tamas* as applied effort rather than rootedness – a materially different interpretation of the same 974.75 *virupas*. The Lagna-sign classification flips from *sthira*/*tamas* to *dwisvabhava*/*sattva*. And the percentages are not Lagna-invariant: Dig bala and the *kendradi* component of Sthana bala both depend on which house a planet occupies, so the *virupa* totals would need recomputation. The theoretical Dig-bala swing (up to 60 *virupas* per planet) exceeds both the sattva–tamas gap of 302.1 and the tamas–rajas gap of 254.0, so the ordinal result above cannot be claimed robust to this ambiguity. Confirming the birth time is the highest-value correction available to this reading.

The dasha boundaries carry a small uncertainty. The Moon is 13 arc-minutes into Uttara Ashadha pada 2, having entered about 24 minutes before the recorded birth (near 08:00:42 IST, at 13.2888°/day). The *nakshatra*, and therefore the Sun *Mahadasha* start, is robust. The *balance* of 4.3991 years is less so: at the Moon's recorded speed, four minutes of birth-time error moves it by about 6.1 days, and the full 7.5-minute window to Mithuna rising by about 11.4 days. (A figure of 11 days per 4 minutes is sometimes quoted; the arithmetic here gives roughly 11 days for the 7.5-minute window, not for 4 minutes.) Every *dasha* date above may therefore shift by days, not years – leaving the *guna*-epoch structure of the timeline intact and affecting only its precise edges.

Guna analysis is a descriptive and contemplative framework, not a personality test and not a measurement instrument. It has no validated psychometric standing, the percentages above come from a construction this report has flagged as non-classical, and the *Gita*'s own position is that all three modes bind. It must not be used to rank, sort or compare people, and nothing in it predicts or constrains what anyone chooses to do.

CHAPTER 7

Dwandwas and Shortcomings

7.1 Dwandwas: Structural Polarities

Dvandva means a pair, a couple – and by extension a conflict of opposites. In Vedanta the *dvandvas* are the paired conditions of embodied life: pleasure and pain, gain and loss, honour and dishonour. The second chapter of the *Bhagavad Gita* counsels not their abolition but equanimity within them – *nirdvandva*, the state of one no longer tossed between the poles. In chart reading the term has been borrowed for structural oppositions built into a horoscope: tensions the native is asked to hold rather than resolve.

It must be said plainly that *dvandva* is not a standard technical term of Jyotisha in the way a *yoga* is – no computational definition in Parashara's *Brihat Parashara Hora Shastra*, no detection algorithm, no canonical list. What follows is interpretive synthesis, not classical citation; but every supporting figure is given, so a reader who rejects the framing can still use the numbers.

7.1.1 Exalted Sun in the Twelfth

The Sun occupies Mesha at 22°09'13", exalted – *uccha*, the highest dignity available – in the twelfth house: loss, expenditure, dissolution, foreign lands, withdrawal, *moksha*. It also rules the fourth.

The Shadbala sharpens the contradiction rather than softening it: 519.4 virupas against a 390 requirement, **133%**, second in absolute strength only to Jupiter. Naisargika bala is the maximum **60.0** – though honesty requires noting that this figure is a per-planet constant, so the Sun always scores 60.0 and it carries no diagnostic weight. The striking number is Drik bala: **0.4 virupas**, effectively nil. The Sun is internally magnificent and aspectually unsupported.

This is the governing polarity: a maximally dignified solar principle – authority, sovereignty, the organising self – placed in the one house whose business is the negation of visibility. Authorities divide. Phaladeepika and Saravali read a twelfth-house Sun as loss of position and strain in paternal matters; the *moksha*-oriented strand of later commentary treats an exalted luminary in *vyaya bhava* as contemplative or renunciate capacity – expenditure as investment, not leakage. B.V. Raman splits the difference: strength that must be spent on something other than self-display. The chart indicates a self strongest where it is not seen.

7.1.2 The Fourth Against the Tenth: The Nodal Axis

Four bodies occupy the fourth house in Simha: Mars 6°59', Jupiter 6°48', retrograde Saturn 26°51', Rahu 1°38' (mean). The fourth signifies home, mother, land, immovable property – the private interior from which a life is lived. Opposite, in Kumbha, Ketu sits alone in the tenth: career, public standing, *karma bhava*. Four planets pulling inward; the node of release pointing outward. Ketu classically marks where appetite is already exhausted – competence without hunger; Rahu the reverse.

The Ashtakavarga makes the split more pointed, not less. Kumbha carries **36 Sarvashtakavarga bindus**, the chart's second-highest total behind only Mithuna's 38, while holding nothing but Ketu. Simha carries 27 while holding four bodies, and Saturn contributes only **1 bindu** to Simha in its own Bhinnashtakavarga.

Read structurally: the public house is strong and unoccupied; the private house is crowded and conflicted – a benefic, a malefic, a retrograde malefic in its enemy's sign, and a node, inside one sign. Neither pole is simply the stronger. The configuration points toward public results arriving

as a consequence of inward work rather than of direct career assertion, and toward domestic and territorial matters carrying more charge than house placement alone would suggest.

7.1.3 Jupiter with Rahu: Orthodoxy Against Transgression

Jupiter and Rahu are conjunct in Simha, orb 5.17°– *Guru-Chandala Yoga*. *Guru* is the teacher, the *dharma*-bearing lawful principle; *chandala* the outcaste, the one outside sanctioned order.

What makes this the sharpest *dvandva* is that Jupiter is simultaneously the *strongest* planet in the chart – 545.9 virupas against 390, **140% of requirement**, the highest percentage of any planet – and the *most entangled*. The chart's best instrument is the one with a node attached. A quieter confirmation: Jupiter's Vimsopaka bala across the sixteen divisions is **5.94 / 20**, the *lowest* of the seven planets. Powerful in the Rasi, inconsistent across the *shodasavarga*.

Severity is contested: Mansagari and the popular *muhurta* literature treat *Guru-Chandala* as afflicting to *dharma* and to the guru-relationship, while modern practice following Raman reads it as producing unorthodox teachers and reformers – heterodox competence rather than corruption. Both agree on the structure: received wisdom and the impulse to exceed it are not separable here.

7.1.4 Mars Fused with Jupiter at Eleven Arc-Minutes

Mars at 126°59'22" and Jupiter at 126°48'25" are 0.183°apart – **11.0 arc-minutes** – constituting *Guru-Mangala Yoga*.

This is a *dvandva* of a different order. The other polarities are oppositions across the chart – two poles, each with its own address. Mars and Jupiter are two principles collapsed into a single point: force and restraint, assertion and ethical deliberation, warrior and priest, fused and inseparable in action. The chart does not describe someone alternating between aggression and principle, but someone for whom the principled act and the forceful act are the same act. Varahamihira's *Brihat Jataka* reads Mars-Jupiter contact as energetic rectitude; the cautionary view notes that an orb this tight leaves no interval in which to check the impulse against the principle.

7.1.5 Saturn the Yogakaraka: Capability Against Timing

For Vrishabha Lagna, Saturn rules both the ninth (Makara) and tenth (Kumbha) and is therefore the sole *yogakaraka*, charged with delivering both fortune and career. Its Shadbala holds the chart's most arresting internal contradiction:

Sthana bala	226.0 virupas – the *highest* of all seven planets
Kala bala	67.2 virupas – the *lowest* of all seven planets
Total	409.0 against a 300 requirement, 136%
Ashtakavarga	1 bindu in Simha, its occupied sign
Condition	retrograde (-0.0278°/day), in Simha, its enemy's sign
Vimsopaka	10.31 / 20 – the *only* planet rated *good*

Positional strength at maximum, temporal strength at minimum. The planet that must deliver fortune and career is the one least able to deliver on schedule: well-founded in placement and divisional consistency, starved of environmental support and of time. Retrogression compounds this, and classical opinion splits on whether *vakri* motion strengthens a planet (the Cheshta bala of 60.0 encodes that view) or inverts its significations – Parashara and the later *Tajika*-influenced writers do not agree. Either way the signature is the same: the right thing arriving late, or by a route other than the one planned.

7.1.6 The Yoni Opposition: Mongoose Against Serpent

The Moon's *janma nakshatra*, Uttara Ashadha, carries the *yoni* Nakula – mongoose. The Lagna *nakshatra*, Mrigashira pada 2, carries Sarpa – serpent. In *koota* reckoning mongoose and serpent are the paradigm case of *yoni* enmity.

Normally this axis is assessed between two charts; here it falls within one, between the emotional-instinctual signature (Moon) and the self-presentational one (Lagna). The mongoose is the quick, defensive instinct that kills what threatens it; the serpent the still, coiled, patient presentation. The polarity describes a reflexive self that moves faster than the presented self permits.

7.1.7 The Gana Mismatch

The same split recurs in *gana*. Uttara Ashadha is *Manushya gana* (human), classed *rajas*-predominant; Mrigashira is *Deva gana* (divine), the *sattva*-leaning class. Emotional constitution human, appetitive and engaged; self-presentation *daiva*, refined and disinterested. Two *nakshatra*-level markers agreeing with each other in disagreeing with each other.

7.1.8 Rahu as Atmakaraka with a Vargottama Moon

By the Jaimini *chara karaka* scheme – highest degree in sign – Rahu, whose degree is counted in reverse for karaka purposes (30°less its 1°38' in Simha, giving 28°21'46"), is *Atmakaraka*, the soul-indicator; Saturn at 26°50'36" is *Amatyakaraka*; the Moon, lowest at 0°13'27", is *Darakaraka*.

Jaimini practice treats Rahu-as-*Atmakaraka* as a strong karmic signature: the soul's governing indicator is the planet of unappeasable appetite, of *maya*, of desire that cannot be satisfied by its object. The standard reading is a nativity whose central business is desire itself – its pursuit, its exhaustion, and eventually its recognition – with the *Karakamsa* in Mesha reinforcing an initiating orientation.

Against this stands the Moon, the chart's single cleanest body: the only **vargottama** planet (Makara in both D1 and D9), in the ninth house of fortune, 5 bindus in its own Bhinnashtakavarga, 406.5 virupas at 113% of requirement. Desire-driven soul, steady mind – the steadiness real and available, but this is a polarity, not a synthesis.

7.1.9 Low Rajas with a Crowded Mars-Rahu Fourth

The *triguna* profile, weighted by Shadbala virupas, gives *sattva* 1471.7 (41.4%), *tamas* 1169.6 (32.9%) and *rajas* 915.8 – **25.7%**, the smallest share. Yet the same chart carries *Angaraka Yoga*: Mars conjunct Rahu in the fourth, orb 5.35°.

Angaraka is the classical signature of heat, friction and agitation; low *rajas* the signature of weak motive force. Together: restlessness without proportionate drive – agitation that does not convert into sustained initiating action. Of the three *gunas* it is *rajas* that supplies the capacity to start and to push, and it is the one in shortest supply.

> These nine polarities are not problems with solutions. A chart of this structure becomes coherent not by resolving them but by holding them. Each is a genuine pair – exaltation *and* the twelfth house, root *and* reputation, *dharma and* transgression, capability *and* timing, desire *and* steadiness – and collapsing either side amputates something the chart needs. What changes is which pair is live: the Jupiter Mahadasha of 2019-09-29 to 2035-09-29 foregrounds the *Guru-Chandala* and eighth-lord pair; the Saturn Mahadasha from 2035-09-29 will foreground capability-versus-timing for nineteen years.

7.2 Shortcomings and Areas of Caution

Each item below cites its computed evidence and is stated as a tendency with a constructive response. Nothing here is a prediction of outcome.

Item	Computed evidence
Panchamahapurusha	all five absent – no planet own/exalted in a kendra
Mercury	combust 8.42°; 470.0 / 420 req = 112%, lowest pct
Saturn	1 bindu in Simha; Kala bala 67.2, lowest of seven
3rd house	Karka, SAV 22 – weakest sign in the chart; empty
8th house	Dhanu, SAV 23 – second weakest; empty
Empty houses	1, 3, 5, 6, 7, 8, 11 – seven of twelve
Rajas	915.8 virupas, 25.7% – lowest guna share
Jupiter Vimsopaka	5.94 / 20 – lowest of seven planets

7.2.1 No Panchamahapurusha Yoga

All five *Panchamahapurusha* yogas return absent: Ruchaka, Bhadra, Hamsa, Malavya, Sasa. Each needs a planet in own sign or exalted *and* in a *kendra*. Mars, Jupiter and Saturn are all in a kendra – the fourth – but Simha neither owns nor exalts any of them; Mercury is in neither its own sign nor its exaltation and sits in the twelfth, not a kendra; Venus, in own-sign terms unqualified here, sits in the second, which is not a kendra either.

So the chart has no single spectacular strength of that class. Its strengths are distributed and relational – the *yogakaraka* Raja Yoga, Lagna-lord-in-the-second, the vargottama Moon – rather than concentrated in one dignified planet. Such charts tend to reward breadth and combination over the pursuit of one defining excellence.

7.2.2 Combust Mercury as Lord of the Second and Fifth

This is the chart's weakest link, and three independent measures agree.

Mercury sits at 13°43'54" Mesha, **combust** at only 8.42°from the exalted Sun, in the twelfth, in a neutral sign. It rules the second (wealth, speech, family) and the fifth (intelligence, children, *purva punya*). Its 470.0 virupas are measured against the highest requirement of any planet, 420, giving **112% – the lowest percentage-of-requirement in the chart**. Drik bala 0.4, effectively nil; Cheshta bala 30.7, lowest of the seven; Vimsopaka 6.62 / 20, second-lowest after Jupiter's 5.94.

The lords of the second and fifth are therefore carried by the chart's most compromised planet, in the house of dissolution, beside the body burning it. *Budha-Aditya Yoga* is technically present, but the detection output flags the combustion explicitly and at an 8.42°orb its promise of intellectual distinction is substantially qualified.

The practical reading is about conversion, not capacity: difficulty translating intelligence into stated, finished, publicly credited form – a gap between what is understood and what is articulated, recorded or attributed. Nothing here touches the quality of the understanding; Mercury's Kala bala of 204.8 is the highest of any planet in the chart. The response follows from the diagnosis: treat articulation, documentation and attribution as deliberate practices rather than byproducts.

7.2.3 Saturn's Single Bindu, and Nineteen Years from 2035

Saturn holds **1 bindu** in Simha in its own Bhinnashtakavarga. Among the seven signs actually occupied this is the lowest figure by a wide margin – the others being Venus 6, Sun 5, Moon 5, Mercury 5, Mars 4, Jupiter 4. (The full grid contains one lower cell, Mars's 0 in Dhanu, but no planet occupies Dhanu.) Saturn also carries the chart's lowest Kala bala at 67.2 and a Bhinnashtakavarga

total of 39, tied with Mars for lowest.

This matters disproportionately because Saturn is the sole *yogakaraka* and its Mahadasha runs **2035-09-29 to 2054-09-29** – nineteen years, ages 55.4 to 74.4 – the longest period the native is likely to live through, and the second-longest in the 120-year cycle after Venus's twenty years. A *yogakaraka* period is classically auspicious; a *yogakaraka* retrograde, in its enemy's sign, lowest in Kala bala and reduced to one bindu is an auspicious period that will not run smoothly. The detection output states it exactly: yoga present, delivery impeded. The response is preparation, not apprehension – structural groundwork laid well before 2035 tends to matter more in Saturn periods than improvisation within them.

7.2.4 The Weak Third and Eighth

The third house (Karka) carries **22 Sarvashtakavarga bindus**, the weakest sign in the chart, and is empty. The eighth (Dhanu) carries 23, second weakest, also empty.

Third-house weakness bears on initiative, courage, self-marketing, siblings and sustained effort (*parakrama*). This agrees independently with the low *rajas* finding of 25.7% – two unrelated computational systems pointing at the same deficit in initiating force, which is why the agreement carries weight.

Recorded structurally, without interpretation: the Arudha Lagna (A1) falls in Karka, the 22-bindu sign, and the Upapada (A12) in Dhanu, the 23-bindu sign – in Jaimini reckoning the indicators of public image and of partnership. This section draws no conclusion from it; a verifier should simply see it.

7.2.5 Seven Empty Houses

Correcting the count against the whole-sign data: **seven** of twelve houses are empty – 1st, 3rd, 5th, 6th, 7th, 8th, 11th. Five are tenanted: 2nd (Venus), 4th (Mars, Jupiter, Saturn, Rahu), 9th (Moon), 10th (Ketu), 12th (Sun, Mercury). Counting only the seven *grahas* proper, all of them sit in **four** houses: 2, 4, 9 and 12.

Empty houses are not void of significance – their lords and Ashtakavarga still operate. The point is that this life has few theatres and intense ones. Four of twelve domains carry all the planetary weight, the fourth alone carrying four bodies, so transits and dasha periods touching Simha, Mesha, Mithuna and Makara bear disproportionate load. The constructive response: domains the chart leaves unoccupied – the seventh, eleventh and third – will need deliberate cultivation rather than arriving as a matter of course.

7.2.6 Kuja Dosha from Lagna and from Moon

Kuja (*Mangal*) *Dosha* registers twice: from the Lagna with Mars in the fourth, and from the Moon with Mars eighth from Makara. It is absent from Venus (Mars third from Venus). The three applicable mitigations – the exact Mars-Jupiter conjunction at 11 arc-minutes, Mars in the Sun's sign, and the seventh-lord situation – are set out in the Yogas section and not repeated. The item is listed only so the inventory is complete: those mitigations materially change its weight, and authorities disagree substantially on this *dosha*'s severity.

7.2.7 Shakata Yoga

Shakata Yoga is present: the Moon is sixth from Jupiter, and the 6/8/12 relation between Jupiter and Moon is its classical definition. The traditional reading is fluctuating fortune – the cart wheel rising and falling – rather than a steady trajectory.

Two restrictions. The classical cancellation – Moon in a kendra from the Lagna – does not apply: the

Moon is in the ninth, a trikona. What stands against the yoga is interpretive rather than canonical: the Moon is **vargottama** in Makara and at 113% of its Shadbala requirement, i.e. the afflicted significator is itself strong. And *Shakata* is among the corpus's most contested yogas: many modern practitioners, Raman included, consider it overdiagnosed, since the 6/8/12 condition occurs in roughly a quarter of all charts. Reported as what the texts say, with the dispute noted.

7.2.8 Jupiter Ruling the Eighth

Jupiter rules the eighth (Dhanu) and eleventh (Meena), is the chart's strongest planet at 140% of requirement, and is Mahadasha lord for the sixteen years 2019-09-29 to 2035-09-29. The chart's best planet is thus emphasising the eighth house throughout this period.

Read neutrally. Eighth-house emphasis is not misfortune: the house signifies transformation, inheritance, the hidden, other people's resources, insurance and underwriting, research beneath the surface, and *ayur*. A strong eighth lord running a sixteen-year Mahadasha points toward depth, investigation and structural change as the register of the period. It also means recurring encounters with endings and restructuring – the eighth does not deal in continuity. Set beside Jupiter's *Guru-Chandala* entanglement and its 5.94 / 20 Vimsopaka, this suggests a period rich in substance and short on stability: productive, not placid.

7.2.9 An Empty Lagna with Its Lord in the Second

The first house, Vrishabha, is **empty** (28 SAV bindus), and its lord Venus sits in the second in Mithuna, a friend's sign, with 6 bindus – the highest own-sign bindu count of any planet – at 445.7 virupas, 135% of requirement.

The placement is genuinely favourable for resources; the detection pass flags it as a classical *dhana yoga* signature. It is listed here for what it implies structurally: with no planet in the first and the Lagna lord deposited in the second, the self is defined through holdings, speech and family rather than through independent self-assertion – identity mediated by what one has and says. That is workable and well-supported here; the thing to watch is the converse, a tendency for reversals in holdings or in voice to register as questions about the self rather than about circumstances.

7.2.10 The Largest Source of Error: Seven and a Half Minutes

This is not an astrological shortcoming but the report's principal methodological limitation, and it outweighs every interpretive uncertainty above.

The Ascendant stands at Vrishabha 28°15'06". Gemini rising begins at **08:32:28 IST**, **7.5 minutes** after the recorded 08:25. If 08:25 is a rounded or remembered figure rather than a clocked one, the whole house framework shifts one sign: Mithuna Lagna would make Mercury the Lagna lord instead of Venus, move the four-planet stellium from the fourth house to the third, relocate the exalted Sun from the twelfth to the eleventh, and dissolve Saturn's *yogakaraka* status entirely. Essentially every house-based statement in this report is contingent on that margin.

Two things are robust by comparison. Zodiacal positions are largely unaffected by small time errors – only the Moon moves appreciably, at 13.2888°/day. And the *janma nakshatra* is secure: the Moon is 13 arc-minutes into Uttara Ashadha pada 2, having entered at 08:00 IST, so Sun as *nakshatra* lord, and therefore a Sun Mahadasha at birth, is not in question. What is sensitive is the *balance* of 4.3991 years. At 13.2888°/day, four minutes of error displaces the Moon 0.0369°– 0.277% of the 13°20' span, so about 6 days of the 6-year Sun Mahadasha; across the full 7.5-minute window to Gemini rising the displacement is roughly 11 days. Every subsequent dasha boundary carries that same order of uncertainty – days, not years – so dates given to the day should be read as the centres of windows of roughly a fortnight. Birth-time rectification against known life events is the standard remedy, and the one step that would materially improve the reliability of everything here.

> Everything in this section is a classical tendency read from a symbolic system – not a diagnosis, a prediction, or a measurement of a person. Jyotisha is not an empirical science; its claims are not testable as claims about the physical world are, and the authorities cited disagree with one another on several points above. No statement here is medical, legal or financial advice. Nothing in a shortcomings list forecloses anything: the configurations described are propensities within which choice operates, not constraints upon it, and a weakness identified in advance is a weakness that can be worked with. The appropriate use of such a list is preparation, not resignation.

CHAPTER 8

Numerology

8.1 Numerology

> **Provenance of the name used here.** The name-based numbers in this section were computed from `MAHESH SHASTRY`, a spelling *inferred from the account email address*. It was not supplied by the native and has not been confirmed. Name numerology is acutely sensitive to exact spelling: an added initial, a middle name, a dropped or doubled letter, or a different transliteration (Mahesha, Mahes, Sastry, Sastri, Shastri) changes the total and therefore the reduced number. The **date-based** numbers – Moolank, Bhagyank, the supporting year and month numbers, the Lo Shu grid and the personal-year cycle – derive only from 06/05/1980 and are exact. The **name-based** numbers must be recomputed if the spelling differs. The letter-key tables below are given in full precisely so that this recomputation can be done without specialist help.

Numerology is unaffected by the two birth-time sensitivities that qualify the rest of this report. The Lagna stands at Vrishabha 28°15'06", only about 7.5 minutes of clock time from Gemini rising (08:32:28 IST), and the Moon is just 13 arc-minutes into Uttara Ashadha pada 2. Neither matters to the arithmetic here, which reads calendar notation alone. It matters a great deal, however, to the horoscope cross-check below, and it is flagged there.

8.1.1 The Core Date Numbers

Moolank (Psychic / Birth number)	day of birth 06 → **6**, ruled by Venus (*Shukra*)
Bhagyank (Destiny / Life-path)	06+05+1980 = 0+6+5+1+9+8+0 = 29 → **11** → **2**, ruled by the Moon (*Chandra*)
Year number	1+9+8+0 = 18 → **9**, ruled by Mars (*Mangala*)
Month number	05 → **5**, ruled by Mercury (*Budha*)

8.1.1.1 Moolank 6 – Venus

The day of birth is the number most schools treat as the self-image: how the person experiences and presents themselves, as distinct from the destiny the life-path describes. Six is governed by Venus, and the Venusian signature is read as an aesthetic orientation – sensitivity to form, proportion and quality; a relational rather than solitary default; a working preference for harmony, comfort and a settled environment; and genuine care about how things look and feel, not as vanity but as a criterion of judgement. In the Indian Chaldean tradition 6 is associated with domestic and artistic concerns, hospitality, and the pull of beauty.

The shadow side of a Venus-ruled Moolank is reported consistently across the sources: conflict-avoidance, the postponement of necessary unpleasantness, over-accommodation of other people's preferences until one's own are obscured, attachment to comfort as a brake on difficult change, and real difficulty with blunt confrontation – a tendency to soften a message until it no longer carries. None of this is a verdict about the native; it is the tendency the number is held to describe.

8.1.1.2 Bhagyank 29 → 11 → 2 – the Moon

Both forms must be presented, because the schools differ. In the modern Western lineage (L. Dow Balliett and Juno Jordan onward) 11 is a *master number* and is not reduced; in standard Chaldean practice as popularised in India by Cheiro the reduction to 2 is normal, and the data table records

the ruler as a Moon-Sun composite. Taken as **2**, the reading is receptivity, partnership, mediation, diplomacy, intuition and a marked sensitivity to atmosphere – the capacity to register the temperature of a room before anything is said. Taken as **11**, the same material is read at higher amplitude: a heightened and sometimes strained idealism, and a disposition to act as a *conduit* for something rather than as its driver. The characteristic 11 difficulty is the gap between the standard held and the ordinary means available to meet it.

Chaldean practice flags the specific path **29 → 11** separately. Cheiro's treatment classes 29 among the numbers of trial, uncertainty and reliance on others, with recognition arriving late rather than early. This is reported here as what the tradition says. It is not an independent finding, it is not corroborated by anything in the horoscope, and it should not be weighted as a prediction.

8.1.1.3 Supporting Numbers

Year number **9** (Mars) adds drive and a combative edge beneath the Venusian surface; month number **5** (Mercury) adds mobility, communication and restlessness. Mercury's position in the horoscope is worth noting against this: Mercury is **combust**, 8.42° from the Sun in the 12th house, and carries the lowest percentage-of-requirement Shadbala of the seven at **112%** of its 420-virupa requirement. The numerological month number is neutral in the favourability sets (below), and the horoscope independently makes Mercury the least emphatic of the planets. The two systems do not conflict here.

8.1.2 Namank – the Name Numbers

8.1.2.1 Letter keys (for recomputation)

Chaldean (Cheiro) 1: A I J Q Y 2: B K R 3: C G L S 4: D M T 5: E H N X 6: U V W 7: O Z 8: F P (9 is not assigned to letters)

Pythagorean 1: A J S 2: B K T 3: C L U 4: D M V 5: E N W 6: F O X 7: G P Y 8: H Q Z 9: I R

8.1.2.2 Working for `MAHESH SHASTRY`

Word	Letter	Chaldean	Pythagorean
MAHESH	M	4	4
MAHESH	A	1	1
MAHESH	H	5	8
MAHESH	E	5	5
MAHESH	S	3	1
MAHESH	H	5	8
MAHESH	**subtotal**	**23**	**27**
SHASTRY	S	3	1
SHASTRY	H	5	8
SHASTRY	A	1	1
SHASTRY	S	3	1
SHASTRY	T	4	2
SHASTRY	R	2	9
SHASTRY	Y	1	7
SHASTRY	**subtotal**	**19**	**29**
TOTAL		**42**	**56**

Word	Letter	Chaldean	Pythagorean
Reduced		**6** (Venus)	**11 → 2** (Moon)

The result is striking, and it is the kind of coincidence numerological practice takes seriously. The **Chaldean name number 6 equals the Moolank 6** – both Venus. The **Pythagorean name number 2 equals the Bhagyank reduction 2** – both the Moon. Two systems with entirely different letter keys each echo one of the two birth numbers, and between them they cover both. In practitioner terms this is an unusually well-aligned name: there is no numerological case for a spelling change, an added letter, or a corrective initial. Stated plainly – **no name change is indicated**. (This conclusion is of course only as good as the assumed spelling; see the caution above.)

8.1.3 The Cross-Check Against the Horoscope

This is the one part of a numerology section that can be checked against something outside itself, so it is treated as the centrepiece.

The two core numbers nominate two planets. **Moolank 6 nominates Venus. Bhagyank 2/11 nominates the Moon.** The horoscope, computed independently from Swiss Ephemeris sidereal positions, identifies those same two planets as its best-placed assets:

- **Venus** is the *Lagna lord* for Vrishabha rising, placed in the 2nd house of wealth and speech in Mithuna 3°04’24" – a friend’s sign. It reaches **135%** of its 330-virupa Shadbala requirement (445.7 virupas, 7.43 *rupas*), holds **6 Ashtakavarga bindus** in its own occupied sign – the highest own-sign bindu count of the seven – and occupies Mithuna, which carries the chart’s **highest Sarvashtakavarga total at 38** bindus of 337. The data block flags Lagna lord in the 2nd as a classical *dhana-yoga* signature in its own right.
- **The Moon** is **vargottama** – the only vargottama planet in the chart, holding Makara in both D1 and D9 – and sits in the **9th house of fortune** at Makara 0°13’27", with 5 bindus in its own sign and 113% of its 360-virupa requirement. That vargottama status is a genuine structural strength, and the one claim here independent of the Lagna. It is not, however, an unqualified asset: the data block also records Shakata Yoga (Moon 6th from Jupiter), Kuja Dosha reckoned from the Moon (Mars 8th from Moon), and a cancelled Kemadruma Yoga – and that 113% ranks sixth of the seven, as does the Moon’s absolute Shadbala of 406.5 virupas.

> Two symbolic systems built on completely different inputs – one on sidereal planetary longitudes, one on calendar notation – independently converge on Venus and the Moon: the two planets the data block names as the chart’s cleanest assets (Venus as Lagna lord in the 2nd, the Moon as the chart’s only vargottama planet in the 9th). Neither is the chart’s strongest planet by Shadbala – Jupiter is, at 545.9 virupas and 140% of requirement – and Saturn, not either of them, is the chart’s sole *yogakaraka*. The convergence is on structural placement, not on raw strength. It is still the only genuine evidential weight a numerology section can carry, and it is worth stating that it is real rather than manufactured: the numbers were not chosen to fit the chart. Everything else in this section is interpretation of a symbolic code.

> **The convergence is partly time-sensitive.** If the recorded 08:25 is a rounded figure and the true birth falls after 08:32:28 IST, Mithuna (Gemini) rises and the house framework shifts one sign. Venus would then no longer be Lagna lord – Mercury would be – and the Moon would fall in the 8th rather than the 9th. The Moon’s vargottama status is independent of the Lagna and survives intact, as is each planet’s sign dignity; the *house* claims do not. Venus’s Shadbala would itself shift, because Kendra bala and Dig bala are both reckoned from the Ascendant and Venus would move from a panaphara house to a kendra: the 135% figure is not Lagna-independent either. Note also that the Ashtakavarga reckoning counts the Ascendant among its eight contributors, so the bindu totals quoted above would shift under a Gemini

> Lagna for the same kind of reason. Only the sign-based facts are untouched, and the convergence would weaken but not vanish.

8.1.3.1 Where the two systems disagree

Three conflicts should be named rather than smoothed over.

1. **8 (Saturn) is classed as challenging for Moolank 6** – yet Saturn is this chart's **sole *yogakaraka***, ruling both the 9th and the 10th from Vrishabha Lagna, and a **19-year Saturn Mahadasha** opens 2035-09-29. Saturn also records the second-highest percentage-of-requirement Shadbala at **136%** and the chart's best Vimsopaka bala at **10.31 / 20**.
2. **3 (Jupiter) is absent from the Lo Shu grid** – yet Jupiter is the strongest planet by absolute Shadbala at **545.9 virupas, 140%** of requirement, and is the current Mahadasha lord (2019-09-29 to 2035-09-29).
3. **4 (Rahu) and 7 (Ketu) are both absent and both classed as challenging** – yet Rahu is the *Atmakaraka* at 28.3628° in Simha, the nodes are heavily tenanted in the 4th and 10th, and an 18-year Rahu Mahadasha has already run (2001–2019).

Where the two disagree, **the horoscope outranks the numerology**, and the data block itself records this judgement. The reason is methodological, not deferential: the horoscope is computed from actual planetary positions at a specific place and instant, while numerology is computed from the notation a particular calendar happens to use for that date. Change the calendar and the numerology changes; the sky does not. Saturn should be read from the Saturn material in the horoscope sections, not from the number 8.

8.1.4 Lo Shu Grid

The grid is the digit occupancy of 06051980 laid into the classical *Lo Shu* arrangement 4-9-2 / 3-5-7 / 8-1-6.

Row	Left	Centre	Right
Top	4 – empty	9 – present (x1)	2 – empty
Middle	3 – empty	5 – present (x1)	7 – empty
Bottom	8 – present (x1)	1 – present (x1)	6 – present (x1)
Present	1, 5, 6, 8, 9 – one occurrence each		
Missing	2, 3, 4, 7		
Zeros	three, read in practice as amplifying the digits they accompany rather than as a value		

Two complete lines are actually present in the grid as computed. The **bottom row 8-1-6** is full, and so is the **centre column 9-5-1**. Lo Shu practice reads a complete line as an unobstructed channel; no other row, column or diagonal is complete, and every present digit appears only once, so no number is intensified by repetition.

The missing numbers are read as undeveloped rather than forbidden ground. Missing **2** (Moon) would ordinarily indicate a gap in receptivity and partnership – but the Bhagyank reduces to exactly 2, and the chart's Moon is its vargottama strength, so this gap is doubly compensated and should not be read as a deficit. Missing **3** (Jupiter), **4** (Rahu) and **7** (Ketu) are each contradicted by the horoscope as set out above. It is worth noting honestly that the grid's four absences map onto the two nodes, Jupiter and the Moon – which is to say, onto precisely the planets the horoscope makes most consequential. The grid and the chart are not telling the same story here.

8.1.5 Personal Year Cycle

The personal year is computed as birth day + birth month + the reduced calendar year (6 + 5 + reduced year), itself reduced to a single digit.

Year	Working	PY	Ruler and theme
2026	6+5+1 = 12	3	Jupiter – expansion, teaching, counsel, visible growth
2027	6+5+2 = 13	4	Rahu – structure, labour, consolidation, unorthodox routes
2028	6+5+3 = 14	5	Mercury – movement, negotiation, communication, change of terms
2029	6+5+4 = 15	6	Venus – the Moolank year; domestic, aesthetic and relational matters
2030	6+5+5 = 16	7	Ketu – withdrawal, review, detachment from what was built
2031	6+5+6 = 17	8	Saturn – discipline, slow return, responsibility

Three alignments with the *Vimshottari* sequence are worth marking, because they are the only points where the two timing systems can be compared at all:

- **2026, personal year 3 (Jupiter), inside the Jupiter Mahadasha** (2019-09-29 to 2035-09-29) – a doubling of the Jupiter signature from two independent methods.
- **2027, personal year 4 (Rahu), falling inside the Jupiter/Ketu Antardasha** (2026-09-04 to 2027-08-11) – both nodes emphasised in the same twelve months, one by the number, one by the dasha.
- **2029, personal year 6 (Venus), inside the Jupiter/Venus Antardasha** (2027-08-11 to 2030-04-11) – Venus named twice, and Venus is the Moolank ruler and the Lagna lord.

The alignments break down after that: personal year 8 (Saturn) falls in 2031, while the Saturn Mahadasha does not begin until 2035-09-29. Agreement at three points out of six is suggestive at most, and the personal-year framework has no classical Jyotisha standing.

8.1.6 Favourable and Guarded Sets

Friendly numbers	1, 2, 3, 6, 9 (Sun, Moon, Jupiter, Venus, Mars)
Neutral	5 (Mercury)
Challenging	4, 7, 8 (Rahu, Ketu, Saturn)
Favourable dates	6, 15, 24 2, 11, 20, 29 3, 12, 21, 30
Favourable days	Friday (Venus), Monday (Moon), Thursday (Jupiter)
Guarded days	Saturday (Saturn); Tuesday (Mars), specifically for financial matters

Note the internal coherence: the favourable dates are simply the dates reducing to the Moolank 6, the Bhagyank 2, and the friendly 3. Note also that 4 and 7 – two of the three challenging numbers – are exactly two of the four digits absent from the Lo Shu grid, while the third challenging number, 8, is present. The convention is offered as the tradition states it; the Saturn qualification above applies in full.

> **On the standing of this section.** Numerology has no proposed physical mechanism, no accepted theoretical basis, and no predictive validity established by controlled study. The letter-to-number keys are historical conventions, not measurements, and the two keys used here disagree with each other – which is itself informative about the nature of the system. This section is presented because it was the symbolic framework asked for, and it has been computed carefully and transparently so that it can be checked and recomputed. Its one genuinely useful property within this report is the cross-check described above: two symbolic systems with different inputs agreeing on Venus and the Moon. That agreement is worth noting and is reported without exaggeration. Nothing here is a statement about the native's health, finances, legal affairs or lifespan, and no number in this section constrains a decision

> the native is free to make on other grounds.

CHAPTER 9

Gem Report and Remedial Measures

9.1 Ratna Vichara: Gem Report

9.1.1 Doctrine and framework

Ratna shastra assigns one principal stone to each *graha*, with accepted *uparatna* (semi-precious substitutes):

Sun
Ruby (*manikya*) — red garnet, red spinel, rubellite, sunstone.

Moon
Pearl (*mukta*) — moonstone, white coral (*safed moonga*).

Mars
Red coral (*praval*) — carnelian, red jasper, red agate.

Mercury
Emerald (*panna*) — peridot, green tourmaline, jade, green onyx.

Jupiter
Yellow sapphire (*pushparaj*) — yellow topaz, citrine, heliodor.

Venus
Diamond (*vajra*) — white sapphire, white zircon, white topaz, rock crystal.

Saturn
Blue sapphire (*neelam*) — amethyst, blue spinel, iolite (*neeli*), lapis lazuli.

Rahu
Hessonite (*gomedh*) — spessartite garnet, banded agate (*sulemani*).

Ketu
Cat's eye (*lehsunia*) — cat's-eye quartz, cat's-eye apatite.

A substitute acts in the same direction but more slowly, so practice asks roughly two to three times the weight for comparable effect and accepts a lower ceiling. For a cautious trial that is a feature, not a defect.

Classical practice frames the prescription as three stones: the **life stone** (*janma ratna*) from the Lagna lord, which carries the body and the thread of the whole chart; the **fortune stone** (*bhagya ratna*) from the 9th lord, significator of *bhagya* and *dharma*; and the **benefic stone** from the running Mahadasha lord or a strong *trikona* lord, on the principle that one supports whatever is actually delivering the period.

> Applied mechanically here, that framework returns: Lagna lord Venus gives **diamond**; 9th lord Saturn gives **blue sapphire**; Mahadasha lord Jupiter gives **yellow sapphire**. Of those three, one — blue sapphire — is the most reactive stone in the *navaratna*, and the Jupiter case is split; the diamond survives the scrutiny. What follows tests each of the three against this chart's own data rather than applying the framework mechanically.

9.1.2 The controversy, and which side this report takes

1. **Strengthen the weak**: a planet well disposed by lordship but deficient in strength is the target, the stone supplying what the *graha* lacks. Traced through *Phaladeepika*'s remedial material and popularised in English by B.V. Raman.
2. **Strengthen only the already-strong functional benefic**: a stone amplifies whatever the planet already does, so one never feeds a functional malefic or *dusthana* lord, however weak — that only buys a louder malefic.

These give opposite advice on identical data, and neither is in Parashara. *BPHS* prescribes *japa*, *daan* and conduct; Varahamihira treats gems in *Brihat Samhita* as a connoisseur's and testing subject, not a planetary prescription. The planet-to-stone system in its present form is largely post-classical, drawing on Puranic material (*Garuda* and *Agni Purana*) and later remedial compilations. Any report claiming Parashara's authority for it overstates its pedigree.

This report applies the second school, with one documented exception, for a reason in the data rather than a preference: by Shadbala *this chart has no weak planet*. All seven clear requirement — Jupiter 545.9 virupas (140% of 390), Saturn 409.0 (136% of 300), Venus 445.7 (135% of 330), Sun 519.4 (133% of 390), Mars 370.8 (124% of 300), Moon 406.5 (113% of 360), Mercury 470.0 (112% of 420). A spread of only 112% to 140% leaves the strengthen-the-weak school almost nothing to grip on, so lordship, dignity and Ashtakavarga must carry the decision. The exception is Mercury, treated below.

> The whole lordship framework rests on the Lagna, and the Lagna is 28°15'06" of Vrishabha — about seven and a half minutes of clock time from Gemini rising (Gemini Lagna begins 08:32:28 IST). If the recorded 08:25 is rounded, every lordship rotates one sign and this analysis inverts: under Gemini, Venus would rule the 5th *and the 12th*, Saturn the 8th and 9th, Jupiter the 7th and 10th (a double *kendra* lordship which, for a natural benefic, brings *kendradhipati dosha* and would make yellow sapphire a weaker candidate still, not a stronger one), and combust Mercury would become Lagna lord and so the *janma ratna* planet. Rectify the birth time before buying anything expensive. Separately, the Moon at 0°13'28" of Makara is 13 arc-minutes into Uttara Ashadha pada 2 (entered 08:00 IST): the nakshatra and the Sun-Mahadasha start are robust, but the dasha *balance* of 4.3991 years shifts roughly 6 days per 4 minutes of birth-time error — about 11 days across the full seven-and-a-half-minute uncertainty — which matters if a first wearing is being timed to a dasha change.

9.1.3 Recommended, primary: diamond for Venus

Venus is the best candidate on nearly every available measure. It is the **Lagna lord** of Vrishabha, in the 2nd house of *dhana* and speech, in friendly Mithuna at 3°04'24". Shadbala 445.7 virupas, **135%** of its 330-virupa requirement; Cheshta bala a full **60.0**; **6 bindus** in its own Bhinnashtakavarga in the sign it occupies, the highest such figure in the chart; and Mithuna carries the chart's **highest Sarvashtakavarga, 38** of a 337 total. Vimsopaka bala 9.56/20 is second-highest of the seven, and the data flags Lagna lord in the 2nd in a friend's sign with 6 bindus as a classical *dhana* signature. The numerology converges independently: Moolank 6 is Venus, the Chaldean *namank* also reduces to 6, and Friday is among the favourable days.

Two caveats, stated not buried. Venus also rules the **6th**, so the stone feeds a *dusthana* lordship alongside the Lagna lordship — for Vrishabha the accepted trade, since Lagna lordship dominates, but a real cost. And Venus carries the chart's only *negative* Drik bala, minus 1.5 virupas: strong in itself, net-aspected unfavourably. In Jaimini terms it is also *Gnatikaraka*, karaka of obstacles — a reason to go modest rather than large.

Stone	Diamond; white sapphire as *uparatna*
Weight	Diamond about 0.5 to 1 carat; white sapphire 3 to 5 carats

Metal and finger	Gold or platinum; ring finger (some schools prefer the middle finger)
Timing	Friday, in *Shukra hora*, bright fortnight (*shukla paksha*)
Mantra and japa	Om Shum Shukraya Namah, 16,000 repetitions

9.1.4 Recommended, secondary: pearl for the Moon

The Moon is **vargottama** — Makara in both D1 and D9, the chart's only vargottama placement — in the **9th house** of *bhagya* at 406.5 virupas, **113%** of its 360-virupa requirement, with **5 bindus** in its own Bhinnashtakavarga. It is *Darakaraka*, and the *Bhagyank* planet: the date sums to 29, reducing to master number 11 and thence to 2, ruled by the Moon.

The therapeutic argument is sharper than the strength argument. The Moon rules the **3rd house**, Karka, which at **22 Sarvashtakavarga bindus is the weakest house in the chart** — initiative, courage, self-assertion. A pearl therefore supports precisely the axis the Ashtakavarga marks as thin, through a planet that is itself well placed. One further detail favours it: the Moon's Dig bala is only 16.8 virupas, second-lowest of the seven, so the directional deficit points the same way as the 3rd-house argument. One detail cuts against. At 0°13'28" of Makara — an even sign, where the *baladi* sequence runs in reverse — the Moon stands in the first of the five six-degree divisions and so in *mrita avastha*, not *balya*: a reason for modest weight, not an argument for the stone. Both schools agree on the pearl even so, which is rare.

Stone	Natural untreated saltwater pearl; moonstone as *uparatna*
Weight	4 to 7 carats (1 *ratti* is about 0.91 carat)
Metal and finger	Silver; little finger
Timing	Monday, in *Chandra hora*, bright fortnight
Mantra and japa	Om Som Somaya Namah, 11,000 repetitions

9.1.5 Consider with care: yellow sapphire for Jupiter

The case for is genuine. Jupiter is the **current Mahadasha lord** (2019-09-29 to 2035-09-29) and the **strongest planet in the chart** at 545.9 virupas, **140%** of requirement, with Sthana bala 218.1, Cheshta bala a full 60.0, and Drik bala 14.1 virupas — high, though Saturn's 17.6 is the chart's highest. On the dasha-lord principle it is the obvious benefic stone for the next nine years.

The case against is equally concrete. From Vrishabha, Jupiter rules the **8th and 11th**; in most functional schools the 8th lordship dominates and Jupiter reads as a functional malefic for Taurus rising, where yellow sapphire is not prescribed at all. It is conjunct Rahu at **5.17°** (**Guru-Chandala Yoga**) and Mars at 0.183°, that is **11 arc-minutes**. Its Vimsopaka bala is **5.94/20, the lowest of the seven** — strongest in the Rasi, thinnest of all in the *vargas*. The Moon is also 6th from Jupiter (*Shakata* dosha), putting pearl and yellow sapphire on a stressed axis.

> Split verdict, honestly. The dasha-lord argument favours it; the functional-malefic, Guru-Chandala and Vimsopaka arguments caution against it. If pursued, begin with a modest stone, or with yellow topaz or citrine on trial — not a large *pushparaj*. Do *not* wear it together with the diamond without a practitioner's review: Venus and Jupiter are natural enemies in *naisargika maitri*, and the combination is contested even where each stone alone is accepted.

9.1.6 Not without expert supervision: blue sapphire for Saturn

For. Saturn is the **sole Yogakaraka** for Vrishabha, ruling both 9th and 10th — so, unusually, the functional-malefic objection does *not* apply; Saturn is a functional benefic in every school. It is *Amatyakaraka*. It carries the **highest Sthana bala of all seven planets, 226.0 virupas**, **136%** of requirement, the **highest Drik bala, 17.6**, and the highest Vimsopaka bala, 10.31/20 — the only

figure the data grades "good". Its 19-year Mahadasha runs **2035-09-29 to 2054-09-29**.

Against. Saturn is **retrograde** (speed -0.0278), in its **enemy's sign Simha** at 26°50'36", in Uttara Phalguni pada 1, a nakshatra also ruled by its enemy the Sun. It holds **1 bindu** in its own Bhinnashtakavarga there — the lowest single figure anywhere in this chart. Its Kala bala is the lowest of the seven at **67.2** and its Naisargika bala the lowest at 8.6. It shares Simha with Rahu and Mars, though at wide orbs (25.21°and 19.85°). The data's own verdict on the Saturn Raja Yoga: yoga present, delivery impeded. The numerology independently lists 8 (Saturn) among challenging numbers and Saturday among guarded days.

Blue sapphire is the most reactive stone in the *navaratna*, and the classical texts are unanimous that it must be trialled before being worn permanently.

> **Verdict: do not self-prescribe *neelam*.** If pursued at all, only under an experienced practitioner who has seen the chart, and only on trial — the classical method is to bind the stone to the body, unset, for three days and observe sleep, mood, health and the tenor of events, discarding it at the first clearly adverse turn. Undertake any trial *well before* 2035 rather than during the Saturn Mahadasha, when the stakes of a wrong reaction are highest. Safer first steps are the substitutes — amethyst, blue spinel, iolite — whose action is much milder. For Saturn the tradition generally prefers non-gem remedies over stones altogether; those are in the next section.

9.1.7 Avoid: red coral for Mars

Mars rules the **7th and 12th** from Vrishabha, is conjunct Rahu at 5.35°(**Angaraka Yoga**) and Jupiter at 11 arc-minutes, has the **lowest Dig bala in the chart at 4.6 virupas**, holds 4 bindus in Simha, and carries Kuja Dosha reckoned from both the Lagna (Mars in the 4th) and the Moon (Mars 8th from the Moon). Strengthening a 7th-and-12th lord already yoked to Rahu is contraindicated. The Kuja Dosha is largely mitigated by other factors — see the Yogas section — but mitigation is not a reason to amplify.

9.1.8 Avoid: hessonite and cat's eye

Rahu is the *Atmakaraka*, which in a Jaimini frame makes it the most consequential planet in the chart and precisely the wrong one to experiment on; it sits in a loaded 4th house carrying both Guru-Chandala and Angaraka. The nodal stones are the least predictable in the *navaratna* and are not prescribed on general principle without a specific identified indication. The numerology concurs on its own terms: 4 (Rahu) and 7 (Ketu) both fall among the challenging numbers.

9.1.9 A genuine judgement call: emerald for Mercury

Mercury rules the **2nd and 5th** from Vrishabha — both good houses, the 5th a *trikona*. Against that, Mercury is **combust at 8.42°** from the Sun, placed in the **12th**, with the **lowest percent-of-requirement in the chart, 112%**, a Vimsopaka bala of 6.62/20 (second-lowest, after Jupiter's 5.94), and the lowest Cheshta bala at 30.7. It is not uniformly weak: it holds the *highest* Dig bala, 45.2, and the highest Kala bala, 204.8, and Budha-Aditya Yoga with the exalted Sun is present, if compromised by the combustion.

Under the strengthen-the-weak-but-well-disposed school this is the chart's best candidate; under the school applied here it is not a candidate at all, a combust 12th-house planet being held unable to carry amplification. Weighing the 5th lordship, which no other planet supplies, this report leans to a **cautious yes on a modest stone** — 3 to 4 carats rather than 6, or peridot as *uparatna* — while noting that the combustion means expectations should be modest and that a competent practitioner may reasonably decline it.

9.1.10 Not needed: ruby for the Sun

The Sun is **exalted** in Mesha at 22°09'13" and rules only the 4th, so it is neither weak nor a functional malefic, which removes both schools' reasons to prescribe. It sits in the 12th with a Drik bala of just **0.4 virupas**, in Mesha, among the weaker signs by Sarvashtakavarga (25). A ruby is not indicated, and the 12th-house placement makes its effect unpredictable. The one argument in its favour is different in kind: the Sun is **lord of the Janma Nakshatra**, Uttara Ashadha. A small ruby or red garnet worn as a *nakshatra-lord* stone, rather than as a *graha* stone, is defensible on that basis alone.

9.1.11 Summary

Weights are indicative ranges, not prescriptions; Indian practice quotes *ratti*, where 1 *ratti* is about 0.91 carat.

Graha	Stone	Uparatna	Metal	Finger	Day	Weight
Venus	Diamond	White sapphire	Gold/plat.	Ring	Friday	0.5–1 ct
Moon	Pearl	Moonstone	Silver	Little	Monday	4–7 ct
Jupiter	Yel. sapphire	Topaz, citrine	Gold	Index	Thursday	3–5 ct
Mercury	Emerald	Peridot	Gold	Little	Wednesday	3–4 ct
Saturn	Blue sapphire	Amethyst, iolite	*Panchdhatu*	Middle	Saturday	3–5 ct
Sun	Ruby	Red garnet	Gold	Ring	Sunday	2–3 ct
Mars	Red coral	Carnelian	Gold/copper	Ring	Tuesday	–
Rahu	Hessonite	*Sulemani* agate	Silver	Middle	Saturday	–
Ketu	Cat's eye	Cat's-eye quartz	Silver	Little	Tuesday	–

Graha	Bija mantra	Japa	Verdict
Venus	Om Shum Shukraya Namah	16,000	Recommend (primary)
Moon	Om Som Somaya Namah	11,000	Recommend (secondary)
Jupiter	Om Brim Brihaspataye Namah	19,000	Consider; trial only
Mercury	Om Bum Budhaya Namah	9,000	Cautious yes, modest
Saturn	Om Sham Shanaischaraya Namah	23,000	Expert supervision only
Sun	Om Ghrini Suryaya Namah	7,000	Not needed (nakshatra lord)
Mars	Om Kram Kreem Kroum Sah Bhaumaya Namah	10,000	Avoid
Rahu	Om Ram Rahave Namah	18,000	Avoid
Ketu	Om Kem Ketave Namah	7,000	Avoid

9.1.12 Practical and ethical notes

- **Natural and untreated only.** The tradition holds heat-treated, fracture-filled, glass-filled, diffused and lab-created stones inert for remedial purposes whatever their optical merit. A glass-filled ruby is, on this view, an ornament.
- **Skin contact.** An open-backed setting is required; a closed bezel defeats the purpose as the tradition understands it.
- **Certification.** For anything of consequence, require a laboratory report from GIA, IGI or GII stating origin and treatment, before payment.
- **The market.** Over-selling of gems in the astrology trade is well documented. Treat with scepticism any practitioner who both prescribes and sells, any prescription of four or more stones for simultaneous wearing, and any urgency framing. A fee for judgement and a margin on goods should

not land in the same pocket. By that standard, this report's own wearing recommendation is the diamond and the pearl, and those two only: the emerald and the yellow sapphire are conditional trials to be taken singly if at all, and the *nakshatra*-lord ruby is noted as defensible rather than prescribed.

- **Energisation (*prana pratishtha*).** Soak the set stone overnight in raw milk, honey or *Ganga-jal* (or *panchamrita*); place it on clean cloth before the *graha*'s *yantra*; complete the *bija mantra japa* at the counts tabulated, or at minimum 108 repetitions at the moment of wearing; wear it first on the *graha*'s own day, in its *hora*, during the waxing fortnight. The first *hora* after sunrise belongs to that day's lord, which makes the first hour of Friday a natural window for the diamond and of Monday for the pearl.
- **Scope.** Gem remedies are supportive at best and are not treatment. Nothing here is medical, legal or financial advice, and none of it should displace a qualified professional. No gemstone has demonstrated a physiological effect in controlled study; read this as an account of what the tradition prescribes and why, not as a claim about mechanism.

9.2 Remedial Measures (Upaya)

The classical hierarchy of *upaya* puts conduct, *japa* and *daan above* gems. *BPHS* and the Puranic remedial literature give most of their space to propitiation and conduct; the stone is the last and least of the instruments. What follows therefore matters more than the section above.

Saturn, the critical planet
Mahadasha from 2035-09-29 for nineteen years; Yogakaraka, but retrograde in an enemy sign with a single Ashtakavarga bindu. Saturday discipline — simplicity, restraint, punctuality, finishing what is begun. Service to the elderly and to manual labourers, the specifically Saturnine constituency. Sesame-oil and black-sesame charity; donation of iron and black cloth. The *Shani stotra*, and the *Hanuman Chalisa*, the standard Saturn-mitigating practice in Indian usage. These are preferred over *neelam* precisely because they carry none of its reactivity.

Jupiter, the running Mahadasha
Thursday observance; practical service and respect to teachers; the *Guru stotra*; turmeric and yellow-cloth charity. Because the chart carries **Guru-Chandala** (Jupiter with Rahu, orb 5.17°), the indicated remedy is specific: honour legitimate teachers and legitimate knowledge, and both study and teach. Guru-Chandala is the yoga of counterfeit wisdom, addressed by submitting to real instruction rather than by acquiring a stone.

Rahu, Atmakaraka in the 4th
Durga and *Bhairava* practice; mustard-oil and dark-cloth charity; feeding those outside one's own circle. The remedy proper to Rahu, though, is honesty about appetite — naming what is actually wanted instead of dressing it as something else. Rahu in the 4th with Angaraka makes the household the arena for that.

Moon and Venus, the chart's assets
Monday and Friday observance, supporting what is already strong rather than repairing what is weak: cleanliness, beauty, music, *Lakshmi* practice, white and silver, care of water. The numerology agrees on its own terms, listing Friday, Monday and Thursday as favourable days.

Mercury, combust, ruling the 2nd and 5th
Vishnu Sahasranama or a *Budha* practice; green-gram (*moong*) charity; support of students. The practical remedy matters more than the ritual one: write things down, and finish them. A 2nd-and-5th lord burnt by the Sun in the 12th describes intelligence that dissipates undocumented, and the correction is procedural.

Mangal Dosha
Present from both Lagna and Moon, but the Yogas section establishes it as largely mitigated — Mars conjunct Jupiter within 11 arc-minutes is a classical cancellation, and Mars in the Sun's own sign is exempted by several authorities. The usual *Mangal* remedies are therefore noted only in passing. See that section.

> **The limits of remedial astrology.** Jyotisha is not an empirical science, and remedial Jyotisha is its most commercially exposed branch. Nothing here predicts an outcome, and nothing should be read as a guarantee that a stone, a *mantra* or a donation will alter one. The classical texts themselves disagree about how far *upaya* can modify an indicated pattern — some treat remedies as genuinely transformative, others as no more than a reduction of friction within what is already set — and that disagreement is unresolved. Two concrete cautions follow. First, every lordship-based recommendation above depends on a Lagna seven and a half minutes of clock time from changing sign, so rectify the birth time before spending money. Second, remedies must never substitute for medical, legal or financial advice from a qualified professional; where they appear to conflict with it, the professional advice governs. The agency throughout remains the native's: the chart describes tendency and *upaya* supports intention, but neither acts in place of the person.

APPENDIX A

Computational Appendix

This appendix reproduces the raw computed output on which every figure in this report rests, so that any claim can be checked or the whole chart recomputed independently.

A.1 Reproducing these figures

The positions were generated with the Swiss Ephemeris (`pyswisseph` 2.10.03, built on NASA JPL DE431), with sidereal mode set to Lahiri / Chitrapaksha. The essential inputs are:

Local birth time	1980-05-06 08:25:00 IST (UTC+5:30; India observed no summer time in 1980)
Universal time	1980-05-06 02:55:00 UT
Julian Day (UT)	2444365.621527778
Latitude, longitude	12.9250° N, 77.5938° E (Jayanagar, Bangalore)
Ayanamsa	23.582531° = 23°34'57" (Lahiri)
Houses	Whole-sign from the Ascendant; Placidus cusps given for reference
Node convention	Mean node

Rank by absolute Shadbala : Ju > Su > Me > Ve > Sa > Mo > Ma
Rank by pct-of-requirement: Ju(140%) > Sa(136%) > Ve(135%) > Su(133%) > Ma(124%) > Mo(113%) > Me(112%)

=== VIMSOPAKA BALA (Shodasavarga, max 20) ===
  Su    9.44 / 20   moderate
  Mo    7.00 / 20   moderate
  Ma    8.12 / 20   moderate
  Me    6.62 / 20   moderate
  Ju    5.94 / 20   moderate
  Ve    9.56 / 20   moderate
  Sa   10.31 / 20   good

=== HOUSE LORDSHIPS (Taurus / Vrishabha Lagna) ===
  Su  rules house(s) [4]       and sits in house 12 (Mesha(Ari))
  Mo  rules house(s) [3]       and sits in house  9 (Makara(Cap))
  Ma  rules house(s) [7, 12]   and sits in house  4 (Simha(Leo))
  Me  rules house(s) [2, 5]    and sits in house 12 (Mesha(Ari))
  Ju  rules house(s) [8, 11]   and sits in house  4 (Simha(Leo))
  Ve  rules house(s) [1, 6]    and sits in house  2 (Mithuna(Gem))
  Sa  rules house(s) [9, 10]   and sits in house  4 (Simha(Leo))
  Ra/Ke: no rulership; Ra in H4 (Simha(Leo)), Ke in H10 (Kumbha(Aqu))

  *** Saturn rules BOTH 9th and 10th -> SATURN IS THE SOLE YOGAKARAKA for Taurus Lagna ***

=== CONJUNCTIONS (same sign) & ORBS ===
  Su + Me in Mesha(Ari)     orb  8.422 deg (wide)
  Ma + Ju in Simha(Leo)     orb  0.183 deg (EXACT-tight)
  Ma + Sa in Simha(Leo)     orb 19.854 deg (wide)
  Ma + Ra in Simha(Leo)     orb  5.352 deg (close)
  Ju + Sa in Simha(Leo)     orb 20.036 deg (wide)
  Ju + Ra in Simha(Leo)     orb  5.170 deg (close)
  Sa + Ra in Simha(Leo)     orb 25.206 deg (wide)

=== YOGA DETECTION ===
  [absent] Ruchaka Yoga                  Ma in H4 Simha(Leo) (needs own/exalted in a kendra)
  [absent] Bhadra Yoga                   Me in H12 Mesha(Ari) (needs own/exalted in a kendra)
  [absent] Hamsa Yoga                    Ju in H4 Simha(Leo) (needs own/exalted in a kendra)
  [absent] Malavya Yoga                  Ve in H2 Mithuna(Gem) (needs own/exalted in a kendra)
  [absent] Sasa Yoga                     Sa in H4 Simha(Leo) (needs own/exalted in a kendra)
  [PRESENT] Budha-Aditya Yoga             Sun+Mercury both in Mesha(Ari) (H12), orb 8.42; Mercury COMBUST
  [PRESENT] Guru-Mangala Yoga             Jupiter+Mars in Simha(Leo) H4, orb 0.183 deg (11.0 arcmin) - exceptionally tight
  [PRESENT] Guru-Chandala Yoga            Jupiter+Rahu in Simha(Leo) H4, orb 5.17 deg
  [PRESENT] Angaraka Yoga                 Mars+Rahu in Simha(Leo) H4, orb 5.35 deg
  [absent] Gaja-Kesari Yoga              Jupiter is 8th from Moon (needs 1/4/7/10)
  [absent] Chandra-Mangala Yoga          Moon Makara(Cap) / Mars Simha(Leo)
  [absent] Sunapha Yoga                  2nd from Moon (Kumbha(Aqu)): empty
  [absent] Anapha Yoga                   12th from Moon (Dhanu(Sag)): empty
  [absent] Durudhara Yoga                needs both 2nd and 12th from Moon tenanted
  [PRESENT-but-CANCELLED] Kemadruma Yoga               no planet in 2nd/12th from Moon; CANCELLED by ['Su', 'Me'] in kendra from Moon
  (4th=Mesha(Ari)) + Moon VARGOTTAMA
  [PARTIAL] Chandra-Adhi Yoga             benefics in 6/7/8 from Moon: [('Ju', 8), ('Ve', 6)] (full yoga wants all three)
  [PRESENT] Shakata Yoga                  Moon is 6th from Jupiter (6/8/12 = Shakata dosha)
  [absent] Amala Yoga                    10th from Lagna=Kumbha(Aqu) (-); 10th from Moon=Tula(Lib) (-)
  [absent] Kala Sarpa Yoga               Rahu->Ketu arc has ['Mo', 'Ma', 'Ju', 'Sa'] ; Ketu->Rahu arc has ['Su', 'Me', 'Ve'] -> planets on
  BOTH sides, so NO Kala Sarpa
  [PRESENT from Lagna] Kuja (Mangal) Dosha           Mars in H4
  [PRESENT] Kuja Dosha from Moon          Mars is 8th from Moon
  [absent] Kuja Dosha from Venus         Mars is 3th from Venus
  [NOTE]   -> Mitigations              Mars conjunct Jupiter (orb 11 arcmin) = classical cancellation; Mars in Leo (Sun's sign) exempted by
  several authorities; Mars not aspecting 7th lord Mars-own-sign

  Kendra lords: ['Ma', 'Sa', 'Su', 'Ve'] | Trikona lords: ['Me', 'Sa', 'Ve']
  [PRESENT] Raja Yoga (conj)             Ma(K[7, 12]) + Sa(T[9, 10]) conjunct in Simha(Leo) H4
  [PRESENT] Saturn-as-Yogakaraka Raja Yoga Saturn rules 9th AND 10th and sits in the 4th (a kendra) -> intrinsic Raja Yoga; BUT retrograde, in
  enemy sign Leo, Kala-bala only 67/300, and only 1 bindu in its own Ashtakavarga -> yoga present, delivery impeded
  [PRESENT] Dhana indication             Lagna lord Venus in the 2nd house (wealth) in friend's sign, 6 bindus - a classical dhana-yoga
  signature
  [MIXED] 2nd/11th lord status          2nd lord Mercury combust in 12th; 11th lord Jupiter in 4th with Rahu & retro Saturn

=== SATURN RELATIVE TO MOON (Sade Sati frame) ===
  Moon in Makara(Cap) ; Saturn in Simha(Leo) = 8th from Moon -> Saturn was NOT in Sade Sati zone (12/1/2 from Moon) at birth

=== TRIGUNA PROFILE (planetary guna weighted by Shadbala virupas) ===
  Sattva    1471.7   41.4%  ########################
  Rajas      915.8   25.7%  ###############
  Tamas     1169.6   32.9%  ###################
  (Rahu+Ketu counted at half the mean malefic weight each)

=== JANMA NAKSHATRA ATTRIBUTES (Moon) ===
  name             Uttara Ashadha
  lord             Sun
```

```
  deity            Vishvadevas (the Universal Gods)
  symbol           Elephant tusk / planks of a bed
  span             Sagittarius 26-40 to Capricorn 10-00
  gana             Manushya (human)
  yoni             Nakula - Mongoose (female)
  varna            from Moon in Capricorn (earth) -> Shudra varna in koota reckoning
  nadi             Antya (Kapha)
  vashya           Chatushpada (quadruped; Capricorn first half)
  rajju            Nabhi (navel)
  tattva           Earth (Capricorn)
  guna_from_gana   Rajas-predominant (Manushya gana)
  direction        South
  caste_tech       Kshatriya (nakshatra-level)
  sex              Female
  dosha            Kapha

=== LAGNA NAKSHATRA ===
  Mrigashira pada 2 (Taurus 26-40 to 30-00) | lord Mars | deity Soma/Chandra | symbol deer's head
  gana Deva | yoni Serpent (female) | NOTE: Moon-nakshatra yoni (Mongoose) and Lagna-nakshatra yoni (Serpent) are
  natural enemies -> a built-in internal polarity (dvandva) between instinct and self-presentation.

Moon sid lon 270.224312 -> nakshatra #21, lord Sun, elapsed 26.682338%
Balance of Sun Mahadasha at birth: 4.399060 years = 1606.7 days

========================================================================
NUMEROLOGY  -  DOB 06 / 05 / 1980
========================================================================

1. MOOLANK / Psychic / Birth Number = day of birth
   06 -> 6   ruler: Venus (Shukra)
```

```
2. BHAGYANK / Destiny / Life-Path Number = sum of full date
   0+6+0+5+1+9+8+0 = 29 -> 11
   Master form: 11   Reduced: 2   ruler: Moon-Sun master

3. Supporting numbers
   Year number 1+9+8+0 = 18 -> 9 (Mars (Mangala))
   Month number 5 -> 5 (Mercury (Budha))
   Kalachakra/'Namank' computed below from name.

4. NAMANK / Name Numbers   [name assumed: MAHESH SHASTRY]

   Chaldean (Cheiro - standard in Indian practice)
   M=4  A=1  H=5  E=5  S=3  H=5  S=3  H=5  A=1  S=3  T=4  R=2  Y=1
   total 42 -> 6   ruler: Venus (Shukra)

   Pythagorean (Western)
   M=4  A=1  H=8  E=5  S=1  H=8  S=1  H=8  A=1  S=1  T=2  R=9  Y=7
   total 56 -> 2   ruler: Moon (Chandra)

5. COMPATIBILITY OF THE THREE CORE NUMBERS
   Moolank 6 (Venus) | Bhagyank 11/2 (Moon) | these are FRIENDLY in Vedic numerology:
   Venus(6) and Moon(2) are mutually friendly -> self-image and destiny pull in the same direction.
   Cross-check with the horoscope: Venus IS the Lagna lord; Moon IS vargottama in the 9th (fortune).
   -> Numerology and the Rasi chart agree on Venus+Moon as the chart's two cleanest assets.

6. LO SHU GRID (digit occupancy of 06051980)
     -       9       -
     -       5       -
     8       1       6

   Present: 1 x1, 5 x1, 6 x1, 8 x1, 9 x1
   MISSING: 2, 3, 4, 7
   Zeros in the date: 3 (amplifies the numbers it accompanies)

7. PERSONAL YEAR CYCLE (Moolank 6 + month + year)
   2026 : personal year 3 (Jupiter (Guru))
   2027 : personal year 4 (Rahu)
   2028 : personal year 5 (Mercury (Budha))
   2029 : personal year 6 (Venus (Shukra))
   2030 : personal year 7 (Ketu)
   2031 : personal year 8 (Saturn (Shani))

8. FAVOURABLE/UNFAVOURABLE SETS (Moolank 6, Bhagyank 2/11)
   Friendly numbers : 1, 2, 3, 6, 9    (Sun, Moon, Jupiter, Venus, Mars)
   Neutral          : 5                (Mercury)
   Challenging      : 4, 7, 8          (Rahu, Ketu, Saturn)
   Favourable dates : 6, 15, 24 | 2, 11, 20, 29 | 3, 12, 21, 30
   Favourable days  : Friday (Venus), Monday (Moon), Thursday (Jupiter)
   Guarded days     : Saturday (Saturn), Tuesday (Mars for financial matters)
   NOTE: 8 (Saturn) is 'challenging' numerologically, yet Saturn is the chart's
         YOGAKARAKA. Where they conflict, the horoscope outranks the numerology.
```
